Hi, Howard:

Your list looks good.

The "emergency Channel" you heard referred to might be 507.0875 (Tac-8). This is called the "Emergency Trigger" channel. The older Rover radios, and I believe the newer Astros have an emergency button that will activate on that channel. Units can also transmit on that channel and by keeping it in simplex, they are limiting the distance the signal will be received so as not block any possible emergency transmissions on that channel, which would be over a repeater.

-Larry

Mike Sugimoto (phloem@islandnet.com) wrote:
: Ross Bellinger (al930131@omega.scs.carleton.ca) wrote:
: : you bet, off to double check my (outdated?) facts. Anyone know if the
: : most recent copy of Canadian Laws is available on the Net?

: Yes. You're looking for Section 46 of the Criminal Code. If you don't feel
: like dragging that big book out, feel free to point to
: http://www.ggw.org/nf2g/laws_on.shtml and follow the links on that page.
: (I believe the code itself is at http://www.ggw.org/nf2g/crimcode.html,
: but I would be very reluctant to put any money on that. The first one,
: however, is correct.)

Thanks for that link. It seems to be the same information as I have in
my copy of the Criminal Code (and which I've discussed at length with many
people, including lawyers and representatives of the phone companies). The
confusion may be in the interpretation of a "private communication".

Here we go, straight out of the Code (not sure of the date, but I grabbed
this off the page http://www.ggw.org/nf2g/crimcode.html).

"private communication" means any oral communication, or any telecommunication,
that is made by an originator who is in Canada or is intended by the
originator to be received by a person who is in Canada and that is made
under circumstances in which it is reasonable for the originator to
expect that it
will not be intercepted by any person other than the person intended
by the originator to receive it, and includes any radio-based telephone
communication that is treated electronically or otherwise for the purpose
of preventing intelligible reception by any person other than the person
intended by the originator to receive it;

A key here is "reasonable for the originator to expect that it *will*
not be intercepted". Note that it does not say *should* not be
intercepted. With the trivialness of using a radio scanner, it is *not*
reasonable for the originator to expect that it will not be intercepted.
Anyone who can show me an actual case in Canadian court which overturns
this please do.

Ross

Last week I picked up a GE 2900 for $149. It is a CM Escort (in white.)

It has a one-year (replace with new or rebuilt unit) warranty so I assume GE/Thompson has a stock of these. It works beautifully.

BTW - CM is also selling the remaining 9600s (in black) with no warranty. They are also selling the remaining battery packs for $20.

Message-ID: <01bc5672$eb8bcf00$0cc074cf@default>
Source record: 198890

It would have been nice to include my entire response to the query
regarding mounting the log periodic in an attic. Given the dimensions of
the CLP5130-2, it is doubtful that it can be rotated in the average attic
confines.

I have about 8 or 9 scanners, including 2 hand helds, that I received
from Scanner World, altho none recently. As far as I am concerned, they
are a good supplier to deal with. But if any problems arise with the
scanner, you must send it to the maker, not back to Scanner World.
Also, if you pay by personal check, it will take 2 or 3 weeks to get the
item, due to check verification, I live in eastern PA, and if I order by
credit card, the item will be here in 1 0r 2 days.

Sounds like a good idea to me, especially if most of your work is VHF-Hi Band or UHF. I have used ham antennas to enhance desired signals near the ham band that the telescoping antenna had difficulty with. I have also used a 6 meter J-pole to enhance VHF lo-band signals. As for a no-fuss wideband scanner antenna however, a discone antenna mounted outside on a tower, and fed with decent coax or hardline would be the antenna of choice.
800 MHZ stuff would probably not work as well with your dual bander as with a discone or an antenna specially made for those freqs. If you are in a good location this may not matter that much.
In summary, give it a try, you can't hurt a scanner with a different antenna.

Hey clueless Masa,

There is no commercialism on my page. It is personal items! So go worry
about your stupid Pro-60 bullcrap page and correct all the errors.

Besides if I thought it was commercial I would put it on my commercial
page which is with GEOCITIES.
http://www.geocities.com/RodeoDrive/4090/
So shove off you worthless refugee!

http://www.geocities.com/Heartland/6095/
Please remove the x from my return address. This is to
prevent the junk e-mail messages I get from the newsgroups.

26. Top Ten Lists

Source record: 198910

I am planning on purchasing a scanner and looked through some of the literature on the internet (mostly FAQs). Basically I'm leaning towards the BC860xlt. Could someone comment on these? I know they are fairly cheap and was wondering if the quality is any good. The pictures I've seen has what looks to be rubber buttons. Are these durable?

Also, on one of the catalogs, I think these scanners can receive part of the cellular frequencies. Is this gap/opening useful? I am impressed with the BC9000xlt, but the price is almost twice as much as the 860xlt. The features I'm looking for are: frequency range (preferably cellular too), durability, and price.

Another thing is, what are some of the major advantages/drawbacks of handheld vs mobile vs base?

(If you are replying, please cc a copy via email in case I miss it through all the traffic here. Thanks!)

Jay

I also have noticed this. I live way out in the country, I almost always here both sides of the conversation at home. However I work in the city, and for some reason I almost always only here the tower side of the conversation only. I guess they might have somewhat newer technology in the crowded area where I work.

A few of the people that I have done business with at the local "Shack" did know what the parts were without resorting to the catalog and how they were used. Although, there are a good number of sales persons who couldn't tell a transistor from a battery. For a large number of people working for Radio Shack or looking through the catalog is their first introduction to electronics.

Ok, I know there are mods out there for it (I know of two, one that supposedly gives it the 800-900 mhz range, Althoguh I doubt it works, and one which increases the speed). Ok 2 questions, does anybody know if the 800mhz mod for it works? I looked at it, and it seemed like it wouldn't. If not, are there any other ways to mod it so that it'll get 800 and 900 mhz range.

Ed,
You are wrong. If it were to protect my privacy then it would be
scrambled. The law is to take away my right to listen to
stray RF energy which is UNSECURE. It is cheaper to pass a
stupid invasive law than scramble it although PCS/CDMA is
being used not to make transmissions secure but to increase
channel capacity thus generate more revenue $$$$.
Stop making excuses for the wireless communications lobby.
You must work for a cellular carrier, right?

>private conversations ? to break the law (U.S.) ?

First, there are any number of modifications (depending on the radio)
that have nothing to do with recieving cellular transmissions. Each
has there own point in enhancing the usefullness of the radio for the
user. The handheld I use I've modified for double the factory speed,
and 16 times the factory memory. I find that extremely usefull, and
it has nothing to do with cellular.

As to the cellular mods. There are basically 3 camps. One are those
who want to do it, "because it's there". The second are those who
think that listening to cell calls will be exciting, and most find out
soon enough that it's actually rather boring. The last are those who
firmly believe that any attempt by the US Federal Government to limit
what can be monitored is an infringement on personal liberty at the
behest of a specific industry. This simply goes against the moral
fiber of these folks, and they willfully (and sometimes publicly)
flaunt the law in an effort to expose it for what it truly is.

Source record: 198935

Wrong, pal. CDMA would mean that the user is taking steps to protect his/her communication. Your point is moot. You know you are wrong and you don't like it.
Maybe making some more felons out of these stalkers will send a message. It's one thing to listen in private, and tell no one about it. Bu the reality of it is, (and proof is the Gingrich taping, which I know wasn't done with an ordinary scanner.) people DO tell what they hear. That is a felony, period. Doesn't matter if it was a cellular or SMR, the only radio services that are in the public domain are public safety, ham radio, broadcast, NOAA WX radio-- that's it. Anything else is considered private to DIVULGE!!! It doesn't mean one can't listen, it is telling or recording or retaining what one hears: even paging messages.

Maybe if people would be a little more low profile about this it wouldn't be such as big damn deal. It's sad that a few losers want to make all people who own scanners (including myself) look like stalkers.

Just goes to show, you don't pay attention to details. Newt did not get caught with his hands in any cookie jar. The ethics committee determined his only fault was "failing to obtain legal advice on the use of GOPAC funds to pay the costs of a college course he taught." Democrats didn't like the conservative nature of this class (I've heard transcripts of it) so they successfully got away with calling it a political usage of these funds.

And why do you have a problem with Newt's friend Bob making him a loan when you have a President out solliciting funds from every John Doe to pay for his legal problems stemming from the Paula Jones civil case?

http://www.rdrop.com/users/billmc

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/ (WWW).

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com (email), or http://www.perconcorp.com (WWW). The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been recently renamed Beyond Police Call and now includes a limited selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the
| FCC Frequency Retrieval System. FCC data for all states is available,
| covering all services and all frequencies. Current data is for first
| quarter, 1996.

| Scanware has chosen to discontinue developing this software, but the good
| news is that the software and data are now FREE! It is being hosted by
| the West Virginia Educational Network. See:
| http://www.wvsc.wvnet.edu/~fcc/index.html

I think the idea is really ludicrous:

1) there are millions of receivers that will not be able to tune in your broadcast. The concept implies that all the existing FM and TV receivers be changed (good for business, though).

2) you will never, ever get the existing TV broadcasters using channel 6 to scrap their existing installations for that project...

P.O.

Hey everyone,

I currently scan with a Uniden Bearcat BC80XLT, and I am receiving too much intermodulation and imaging.

I am thinking of purchasing either a BC3000XLT or a BC9000XLT . . . or both - wife permitting ;-) I know that these are rated as pretty good scanners, but are there other models out there that are just as good or better for the same amount of money?

If you would like to e-mail me privately, remove the "K"

Thanks in advance!

You are correct. FlexStack is a pig. There are many Motorola processor that can run it but their not cheap. You can use a 68HC11K4 or a 68HC11PH8. Either way you need external RAM to store any decent size messages.

Depending on your time to market and number of software engineers you can write your own "FlexStack" in assembly. If you dont care about receiving fragmented or temporary messages, it is fairly easy and only a couple of K of code(4-5K) but it takes a fairly intense understanding of FLEX and the chip set.

The fast time to market is to bite the ROM bullet and use FlexStack.

The FCC pulled type acceptance of the ADI AT-600. I was informed by
AES on 4-30-97 that they were not shipping any AT-600's and that they
would put me on a waiting list for this rig. They didn't know how long
before
the situation would be resolved with the FCC. So it appears that this goes

along with the Radio Shack recall of the HTX-204.

63. Re: Which Mobile Antenna to buy?

Newsgroup: rec.radio.scanner
Date: 1997-05-01 00:00:00 UTC
From: stmagnum@aol.com
Message-ID: <19970501105301.GAA23423@ladder01.news.aol.com>
Source record: 198956

I've tried the Grove antenna coupler and I was not at all impressed. It seemed to pick up only the local, very strong signals.

I also tried the Grove "No-Tenna" - a piece of very thin coax with an RF choke on the end the you attach to your car's chassis somewhere. This also appeared to be no better than a rubber duck antenna inside the car.

However, when I fed BOTH of these into my scanner (BTW - a RadShack Pro-2026) with a BNC T-connector, it appeared to work moderately well. Granted, the reception was not as good as a regular mag-mount or trunk-mount antenna, but it was tolerable. As a bonus, I had no external antenna drawing attention to my vehicle.

I finally gave up on the whole thing when my driving habits changed to some longer distances through rural areas. Now I use a Radio Shack Mag-mount scanner antenna that I converted to a semi-permanent trunk-lip mount. I'm much happier now.

I currently own both the Pro-43 and the Pro-60.

I find myself using the Pro-60 more often for the following reasons:
- image rejection just a wee bit better
- sensitivity is about the same
- light for display actually lights up the WHOLE display
- keypad beep can be turned off
- WFM mode great for FM broadcast and TV audio in a pinch
(such as late-breaking news reports)
- the keypad actually works without fighting and pounding
(Pro-43 keypads have a tendency to go bad)
- Audio seems a little louder, crisper
- I have little use for listening to cellular phone calls. I have a life,
thank you.
- the beltclip doesn't break at the first sign of pressure
(I've gone through THREE beltclips for the pro-43)

That's just my opinion, however. And I may not have a typical
representative of a good pro-43.

Good Luck!

As further proof of this ... I once set up a new email address for myself and all my posts had my email address only in the trailer (like this post). Never got a spam. Then one day I accidentially put my *real* email address in the 'From:' field. I made 6 usenet posts in 2 or 3 groups before I realized my mistake. Just because of those 6 posts, I now get 3-5 SPAMS per week. I realize thats nothing compared to the quantity others get. So, from this I conclude that putting your real email address only in the trailer works. I don't even bother with the 'q42 dot iname dot com' trick or the 'remove NOSPAM to get my real address address' trick. Just getting my address out of the 'From' and 'Reply To' fields seemed to work perfectly for me.

I too can highly recommend MetroWest. I was only getting about 4 hours from my stock Uniden Bat Pack on my BC-3000, I traded that pack in for credit on one of MetroWest's NMH (Nicle Metal Hydride) batteries and now I get about 10 hours usage. I also invested in their Drop-in charger. It's not exactly "drop-in" per se`, but it works real good and it has a trickle charge so you can leave it on all the time and have the battery at peak condition when your ready to use it.

Source record: 198971

Greetings,
I use my Bearcat 200xlt in the car when driving in to work every
morning and have a problem...

As I approach the downtown area in Cleveland I am not able to scan in the
400MHz range due to some transmitter that is being received on all
frequencies (quite loudly too with all sorts of audio noise that sounds
like the effects in an old Atari 2600 game...). This transmission will
overpower any transmission that should be on a given frequence. Is there
any sort of filter, etc that might help avoid this? If it matters, I am
using the on-glass scanner antennae from Radio Shack.

For those of you in the Cleveland area, this problem occurs from the Metro
Curve on I-71 through downtown and then from downtown to University Circle
on Chester avenue...

Any help would be appriciated!

-John

Hi,
Is there any after-market unit that compresses and/or
conditions the audio output of a scanner? Since people
talk at widely differing volumes, that would seem to be a
logical cirtuitry to add. Do any scanners advertise compressed
audio? THanks. PLease reply to daspit@lynx.colorado.edu.

Ramsey makes an audio compressor/limiter for their FM25/FM10 TX units.
I use one, It'll need to be hooked between your speaker/phone output
and an amp/speaker amp. Of course you'll have 2 channels, use the
other for another scanner or radio. I think its called the STC-1. sells
assem 99.95 or kit 59.95 (No case!)....good luck

The BC235XLT does not trunk track (i.e., follow fleet/talk group
conversations) on 938 MHz systems. But, it does scan 938 MHz
systems in the conventional way that most scanners do.

The BC235XLT LCD displays an error message if you try to program
a 900 MHz frequency as a trunked frequency.

All this information is available for free from the FCC at:

http://www.fcc.gov/oet/info/database/raeddf.html

There is a link on this page to a file called MFADB which will convert the downloaded files into an ACCESS Database and then populate the database with all the information from the zipped field.

This site has substantially more data files and information than the previously posted address of :

http://www.fcc.gov/wtb/databases.html

which also has quite a bit of frequency information.

The ADI-AT600 is literally the 204 and more. Take a look in QST (or any HAM Magazine). It is also at least $50 cheaper than the 204. You might also consider Yaesu's FT-50RD.

> 1. Triple conversion scanners, as a rule, will not behave as you say.

wrong. you cannot say triple converter conversion scanners in
general will not receive cells in another frequency. as far as I
know, MOST OF THE TIME, you will not receive cell images because of
higher IF frequencies (I have no idea why triple conv. scanners have
higher IF though).

> 2. You cannot hear the entire cell band using images.

wrong. I hear entire cell band using the images. why do you say
you don't hear all frequencies for cells ?

If you hear only one-way communication at image frequency, then you
hear one way communication at the frequency of 800 MHz band ALSO.
that's at least what I know.

Check their web page at www.grove.net. Price is US $59.95. I have been using one for several years and it works very well. I don't know if they will ship to the U.K. though.

this is true. Tandy has many divisions
-- Radio Shack, Realistic, Computer City and so on.

So... computer city is likely same as Radio Shack, but they have
different name + products.

yeah, City-Bank card is a good idea. It is good for us... and for
Citi-Bank too actually... Citi-Bank now has less expenses for
card-thief purchases.

by the way, why we can's show driver's license + VISA for the purchase
instead of fingerprints ? I guess the idea is same thing...

Dear John,

Thanks for sharing your experience with the trunktracker. When I mentioned in my posting yesterday that it was very easy to operate and that one did not need to know a lot about trunked systems to use it, this was based upon my having used it only with a TYPE II system, i.e. Alameda County in the Bay Area. That is the only system I can receive from where I live that uses Motorola Trunking. From having read the owners manual, I beleive you are correct in saying that for a TYPE I system,
one does need to do more work and know a lot more. Fortunately, according to the manual, most systems in use are TYPE II. Also, I am glad to hear you report that
the radio is triple conversion, which I suspected but did not know for sure. That
explains why I noticed that the selectivity was better than that of the BC230.
Hopefully, we'll hear from more people who have had a chance to play with the
BC235. Thanks again for sharing what you have learned, especially since you have probably had a BC235 longer than anyone.

To clarify: This is a "GE" brand distributed by Thomson, not a "General Electric" one, right? These shared trademarks are confusing. I have a Thomson "RCA" VCR and Thomson "GE" TV set and clock radio, but of course General Electric is still called GE. I haven't see the set yet, but I own an Escort (great set!) and am concerned about service, now that CnMw is belly-up and (according to their web page, still operating) looking for a buyer for the phone division.

Maybe Thomson should pick up the product line.

I can comment on the BC860xlt. We had to buy it to repalce out BC855xlt
because it got fried during a power surge. Our 855xlt, which the 860
replaced, was very durable and covered the same ranges that the 860 covers.
The only difference being a slower scan rate with the 855 and a 50 vs. 100
channel capacity with the 860. If 100 channel storage is all that ypou
nees, the BC860xlt should be good enough, and you can still cover approx 85
percent of the cellular range from the images it picks up because of its
conversion scheme. hope this helps. It doesnt have all of the bells and
whistles that some scanners have, but it works fine for what we need here.

Ok, and I know that you've answered my next question via email which,
for the rest of the newsgroup was:

So why just 800 and not 900 as well?

You said it was because most of the public safety systems were 800.
However, that really doesn't answer my question because there are
certainly trunked systems that aren't public safety yet are desireable
to listen to. Don't laugh, but I like to listen to Disneyland while
I'm at the park.

So the question still remains:

Why just 800 and not 900 as well? Looks like crippleware to me.

the big problem with it is that it's made shabbily.

i tried it and started to mount it and all of a sudden
pieces came off...very poorly made.

that convinced me to buy my discone from either Grove or
Scanner world or Ace....it's still up there and works.

I think I got the one from Grove. It's been a long time
ago since it went up...works fine.

One caveat: you get near a HAM radio operator and you
get to listen to the HAMMER's voicing over the scanner.
it takes over. No way to rid it either. Have had to
listen to this guy for years now at 9am in the morn.

What's strange about it is that all this talk he has
with others you get to learn about that person. Found
out he used to sail the Matson Ships with my father
and he lives within a four block radius. All that time
my father lived there they never bumped into each other.

enjoy a HAMMER today.

If you are that desperate to talk on the cordless band, get a low band radio like a
Motorola MT-1000 or P-200 that is setup for the 42-50MHz bandsplit. It is tuned, will put out about 6W and hears better than any scanner, but an average price of 400+ dollars (used) is alot to talk to no one with!

Go to www.dejanews.com and put in "+scanner +discriminator". Put in every- thing in the quotation marks, but not the quote marks themselves. You should find a 3 part posting from Bill Cheek usually in the recent postings, if not you will just have to do an "old" search. Bill tells you the pinouts that you will need to tap the discriminator. On the 2035 and the 2042, I tend to tap this from the underside of the RF board since it seems a bit easier and I dont have to continually take out my OS535 boards.

Greg-
I wouldnt hesitate to contact Uniden. You can call 1-800-297-1023 and
get them to send you a part immediately. It will probably be cheaper than
some repair places. In ordering some of the parts that I needed to repair
my/friend's scanners, they have been very easy to work with. The phone #
is always quite busy so I hope that you have redial.

For UK call Pooleys, 0181-207-3749 (at Elstree Aerodrome) And order a copy of the Pooleys' Flight Guide. It Lists all the airports in the UK and their frequencies. I think it's around 24 pound. In the USA, try Sporty's Pilot Shop, 1-800-LIFTOFF (543-8633) and order a copy of the Airport Facilities Directory for your area (about $6).

Also, USA, 122.800 (Unicom) and 122.900 (Mulitcom) are frequencies often used at airports without control towers for pilot self reporting of posission and general airport ops.

Happy scanning, Mike N1RNS@aol.com

I use a CB antenna for mobile scanning. It works great for low band &
seems good on the higher frequencies (450-900 Mhz) due to better range
of these signals.

I use a "cellular type" CB antenna, not the best for actual CB
transmitting, but good for scanner receiving.

Pro Channel and other subcarriers like SCA can be quite interesting to listen to. Nothing like hearing a News Director completely "loose it"(ever see Broadcast News..?)...One(other) deccoder that I have found useful for tuning in these services is the one from Ramsey Electronics. For Pro Channel use, you will likely need to reduce the value of the resistor in series with the tuning control so as to get the unit to tune up to 102 KHz. Another service that's like SCA, but transmitted on TV channels is SAP(Second Audio Program).This is also directly available to those that have TVs that decode stereo audio. One TV station in my area uses SAP to retransmit BBC World Service, another has a "talking books" service for the blind on it. The SAP subcarrier is on a frequency of about 82 KHz.

One other easy to get Pro Channel that I discovered before I had my Ramsey SCA decoder, was that I took a device that was meant as an

adaptor to decode TV stereo audio(which sat on top of a non-stereo TV) and I readjusted the pot that set the tuning freq. for getting the SAP subcarrier, and tweeked it higher up to get Pro Channel.

Yet another way that I have experimented with some sucess for getting SCA and SAP, that requires NO mods, using a scanner that can tune the TV and FM Broadcast bands. Program in an frequency offset that is nearly equal to the frequency of a given subcarrier (IE 67 KHz would be 65 KHz, or for 102 KHz use 100 KHz), up from a given broadcast frequency in question. For example, to get the SAP of a CH2 TV station, the audio carrier is on 59.75 MHz. Just add 80 or 85 KHz to that AND be sure to reset to scanner's mode to Narrow FM. The same would apply to trying to find an SCA subcarrier: for an FM station at 102.5 MHz for example, set the scanner for 102.565 MHz, Narrow FM mode. There will likely be a fair amount of "splatter" from the audio of the main CH, it also helps if the signal you are listening to is fairly strong, but this can be an easy way to see if a given station has anything there to begin with...

Enjoy DE WA1YKL

I would agree with you that it would certainly upset the RC boys, but with the crappy frequency stability and modulation limitations, (or lack there of), a guy would have to be an idiot to use any 26-28Mhz channel for RC operations, maybe radio shack cars, but hopefully not aircraft. Even those that use some 6 meter amateur frequecies run some risks. We find that most users today are in the 72Mhz RC channels, but even those run into occasional problems, but not nearly the problems of 27Mhz. I don't do RC but would guess that 27Mhz RC controllersa would be pretty rare now days.

Tom

Computer City is not going out of business. There is a brand new
one under construction in Livonia, MI west of Detroit, their second
outlet in this area. Tandy's mega-stores, The Incredible Universe,
are the ones closing. Hard to tell the players without a scorecard.

Bite the bullet Baba. Buy the best. Get yourself an AR8000. You will NOT be dissapointed. It will do everything you will want to do. Computer control and all.

Desktop or Portable? Surely the andswer is: You can take the portable to an airshow, race track, other public events etc. You can put it in your pocket or on the belt. You can also put it on the desktop too.

I find a desktop model makes too much of a bulge in my jacket when I wear it on the belt! ;^} (It's also a bugger trailing the power cable behind, especially to an outa town event!)

The only things I dislike about handportable radios (of any type & make) is that by the very nature of the thing, it must have a small loudspeaker. This is OK in a quiet envionment but in a noisy environment, there is a risk of turning up the audio too far and damaging the speaker - Many desktop models are not much better on that score either!

The kit I would suggest that you will be very happy playing with would be:-

1) An AOR AR8000 Radio (The best hand portable)
2) Computer Interface and GOOD software (watch out of the garbage s/ware)
3) A computer (I guess you already have one of those!)
4) A good cowhide leather case with a secure and safe belt loop/clip
5) An extension speaker 3 x 5 inches or greater

You also need a reasonable antenna but to start with a rubber duckie is ok. You will see many people condem the antenna that comes with the AR8000. It sucks but it also does work and will give you lotsa fun to start out with. You then get the pleasure of improving the aerial system - getting an outside antenna is one way.

I must have a dozen or more rubber duckies ranging from 70 Mhz, 165 mhz, 450 Mhz 800 mhz etc etc. I have several antennas in the loft and a couple very high gain VHF antennas outside on a mast and rotator.

I still use a 150 mhz quarter wave whip in a magmount base clamped onto the central heating radiator in the office/computerroom/spare bedroom as my main "all purpose, all frequency" device.

You dont have to have a load of stuff like that to get a kick out of the hobby. You "collect" or otherwise "aquire" bits and pieces over the years. The fun bit is doing the collecting and making the discoveries for yourself.

(When I started, the radios were ALL vacuum tube! - I wont bore you with the trials and tribulations of having to design and build different "front ends" for all the different band you wanted to listen to! You had to do that because there wasn't such a thing as a commercial scanner in them days. That's another tail for another day!)

With that, I wish you well and good fortune in this fascinating hobby. I have had over 30 years of fun from it!

Regards

Donald Gray

an answer is at hand: take your car battery out, strap it
and then wear it around your neck or on shoulder and then get
a power inverter to be able to listen to your desk version as
you trudge along the paths you choose to slouch-through.

you can also hire a "md" to follow you as you blaze new
vistas with your state of the benign technology for all to
see and take bets on how long you will last as you trek
on by....

great way to work-out

nice touch for a news photo'r to snap a few and what notoriety
you will find

a tv station may follow up with a "stupid human tricks" feature
for kids tv..."how not to live on earth"

you will save many children's lives by agreeing to be interviewed
and tell your story....

I was fortunate enough to receive a pre-production sample of the BC235XLT
from my distributor yesterday, Wednesday, and I wanted to let people know
what I thought of it.

1. It is much easier to use than I assumed it would be and it is
apparent that a lot of thought went into the user interface
to make it intuitive.

2. You do not need to know anything about trunked systems to
operate it, except for the frequencies. For example, it finds
the data channel for you.

3. It is easy to separate groups (Police, Fire, Ambulance, etc.)
and sub-groups. (Dispatch, Tactical, Detectives, etc. are sub-
groups of the group Police)

4. The sensitivity of the BC235 is considerable better than that
of the BC230XLT after which it is modeled, and in my opinion
is equal to the sensitivity of the BC9000, which was also a
pleasant surprise. Uniden has apparently modified the ciruitry
of the BC230 to enhance its ability to receive weak signals,
especially on 800 MHZ where its sensitivity really stands out.

5. The pages of the owner's manual which I received (pages 36 - 49)
that pertain to the trunktracking features, are well written so
that anyone who has operated a standard Bearcat scanner can
operate this without difficulty.

I have not checked its selectivity but plan on doing so this
evening and will post it tomorrow.

Sincerely, Glenn Cohen

I have A Sony CCD-FX525 camcorder for sale. 8mm tape, 12x variable zoom fader, backlight, date and time stamp, manuel and auto focus, 2 lux, audio and video outputs, edit function, and VTR. Camcorder is in excellent shape! Comes with NP-55 (1200mAh) and NP-80 (2700mAh) battery packs, mini remote control, and battery/power adapter. Camcorder also comes with the Sony SPK-FX1 sports case that lets you use the camera in water. Also have a Pulse battery conditioner (SE8SON) that runs on 12VDC for the car or 120VAC for the house. I have an extended warrantee that expires in August of 97 but is still transferable to the new buyer. Have all receipts. Will reply to e-mail.

>>Ok, I know it's real inconvenient to give out your damn address
>>everytime you purchase something from Radio Shack. But as of last
>>Sunday, Comp USA "finger prints" for ALL purchases paid for by check
or
>>credit card!!! Can you F***ing believe that? That's a total
invasion
>>of privacy.
>
>>Who knows what criminal minds will come up with when they get a hold
of
>>your credit card number and fingerprint. We have to draw the line
>>somewhere. In my opinion, this is way too harsh. Personally, I will
>>not purchase anything from them anymore.
>
They can require a fingerprint on the back of a check. That's
it.

As for credit card...all they can do is look at your identification
as being who you are is who you appear when in front of their
faces...that's it....they cannot take any information down and
record it to the credit card slip or their records....

JUST VERIFY BY SIGHT YOU ARE SAME NAME AS ON CARD WITH PICTURE.

That is why Citi-Bank visa cards are a good thing.

they cannot fingerprint you for a visa/etc. card purchase.

you had better talk to your bank. to the BBB.
to the Credit Card Association...Bank Cards of America too.

call your local district attorney's office and get their input.

alert your media: newspapers and tv stations who have buyer's
alert programs or feature stuff on tv.

You are being screwed and they want you to know it. If enough
people let them know about the fingerprinting as beign illegal
then they will stop....

YOu see...you get your check back. it is not permanent property
of anyone else. So it stays with you.

for bank cards: it's not coming out of the merchant's pocket...they
get paid when that buzzer sounds or that card goes "wheeeeee"
as it glides through the train....

if you are able to: raise hell about this.

why not get a few freinds and make placards and go picket the store
and notify the media what you are doing and when and who to speak
to when they show up and get some exposure to this.

I just picked up a couple of what look to be commercial vhf
radios and I could use some help tracking down more info. I have
only the main unit for each and not the control heads. They
appear to have been made by "Communications Power Inc" from
Sunnyvale, CA. Model number "CP2500 REMOTE" Serial number 8F090.
They look pretty well made - maybe late 70's era.

Does this ring a bell for anyone? Any info is welcome.

Thanks & 73,

Fred, KF9ZI

>CBers have reported shooting VERY long distance skip on these channels
>(since they are less crowded I would suppose)

Long before the FCC changed the official CB allocation from 23 channels
to 40 channels in the mid-1970s, Layfayette sold CB radios with 25
channels.

These radios, among which was the Layfayette COMSTAT 25, were sold in
the mid-1960s and the two extra channels were listed on the channel
selector as A and B. The word at that time was that the FCC was about
to allocate two additional channels, and evidently the FCC considered
it seriously enough to allow Layfayette to sell transceivers with
these two channels installed.

Although my dad still has one of the COMSTAT 25s in his basement,
I don't have the info here to determine exactly which two frequencies
they were.

However, maybe that's how the designator "Alpha" got started.

We did some tests on ham antennas in the scanner bands, and several
of the 2 meter/440 Mhz antennas did better than the antennas specifically
sold as scanner antennas. Of course, the worse/cheapest/simplest of
these "all band scanner antennas" are simply an 18" spike, which is
about what a 2 meter quarterwave mobile antenna is.

22A was what today is channel # 24
22B was what today is channel # 25

Both are between channels 22 and 23 since:

22= 27.225 22A was 27.235
23= 27.255 Therefore 22B was 27.245

I remmember that thats where the unit numbers started,
Every operator used these frequencies with extreme fear and

caution.....

How times change....

Break 22A.....

Carlos..

Yep! Them so-called freebanders with their broadbanded transmitters that you can pick up with a toaster they splatter so much. And with their heaters that they think they are doing great to talk 20 miles with. I tell you I think the whole bunch of radios should be subject to a nuclear blast and never work again.

Glenn,

Having had a TrunkTracker for some three weeks now, I have to agree with some of your comments and take issue with others.
I disagree that a user needs to know nothing about trunked systems to operate the radio - particularly if the system they are trying to monitor is a Type 1 system. While the radio will track many conversations even if not set up properly, to work perfectly on a Type 1 system a fleet map must be programmed. Even for those of us with a decent understanding of trunked systems determining the proper size codes to enter into each block of the system address is difficult. However, until that is done the 235XLT will continue to drop some conversations. Of course, once the system addresses start showing up on the Internet and in frequency guides this will alleviate the problem.
As for modifying the 230XLT's circuitry, I'd have to say you're on the right track, the 235XLT is much more sensitive, but Uniden went further than just modifying the 230XLT. The 235 is triple conversion, whereas the 230 is double, indicating a major redesign, or perhaps starting from the ground up. Either way, I agree with you that the 235XLT is the better radio.
Frankly, I see no reason for anyone to purchase a 230XLT whether they intend to use the trunking ability or not. The 235 has 100 more frequencies, is more sensitive and rejects intermod far better than the 230, all when used as a conventional scanner. It also includes two battery packs and a charging stand that will charge the radio and the spare pack at the same time.

Hello Everyone.

I got a Q for you all. I would like to know if there are any types of Add In boards that will allow me to use my computer for Scanning recieving etc. I had a module that was made by Bearcat (years ago) that i used on my Commodore 64 that turned it into a scanner so to speak. Also 2 others for Morse Code an SWL . Or is there a way to tie my Uniden BC890xlt into the computer ?
Any info on Prgs or Boards that will allow me to do this would be a great help TIA....

P.S: Some said i could find alot of this stuff at Hamfests any truth to that remark TIA once again....

I've been trying to get a metal belt clip for the AR-1000 to replace the plastic cheapo crap unit that is presently in two pieces on my PRO-43. I tried calling EEB, but they said they don't carry parts for the AR-1000 anymore. Anybody know where I can get an AR-1000 beltclip?

thanks

I have the following items for sale:

1) Radio Shack Pro-2030 table top scanner.
80 Channels w/ Hyperscan
Hardly Used - Mint
$60.00

2) Motorola Minitor II Receiver (UHF)
Two Channel
With Drop-In Charger
Now on 453.050 mhz.
$150.00

3) "Always-In-Touch" Paging Unit (New In Box)
Sends Caller I.D. to your pager
Can send "outgoing" or "incoming" calls
If someone calls your home their number will be displayed
in your pager.
New - $65.00

In the beginning, oh so many years ago, there were only 23 channels. The two channels you mention were know, way back, as 22A and 22B. The 10Khz channel spacing between CB channels had, and still has, a synthesizer fluke in them, or for what ever reason, FCC alocation goofiness that has an unused 10Khz channel between 3 and 4, 8 and 9, etc up to 22. There, for even more unknown reason there is actually a 20 khz space before reaching 23. The older radios had a jumper or other device that could be cut to let you actually talk on those channels. 22A was generally all you got with the "mod" and was a popular, illegal frequency in the late 60s and early 70's. There is anothe one below channel 16, the olden days big SSB channel. Many users of SSB frequently would "slide down 10khz" into this un-named channel as well. It has come so far, yet hasn't moved an inch. CB, what a concept!

Tom

202. ## Virtual down conversion for BC-3000XLT, BC-220XLT

Hello fello Usenet'ers,

I'm looking for anyone having experience in the Virtual down conversion concept. I'm looking specifically to implement this into a Uniden BC-3000XLT or BC-220XLT. If anyone has schematics or more technical info about these units I would surely appreceate any help.

Best regards,
techno

(P.S: please email me directly in addition to posting here, so no responses are missed. Thanks!)

Pro-26 is a triple conversion scanner,
and you can hear cellulars VERY CLEARLY.

Let's clear off triple conversion topic.

You "CAN" hear cellular images with triple conversion scanners as long as they support 800 MHz (can be cellular blocked) and if 1st IF frequency is around 30MHz - 400MHz (If you have direct access to cellular bands, then you hear cellulars no matter what scanner you have)

+

Your scanner must handle the frequency range that you determine from IF frequency.

If you have a IF frequency of 100MHz and if your scanner does not support freq. around 600-700 or around 1000-1100, then you do not hear cellular images by using 1st IF frequency.

I can hear the conversation "both ways," not one way to another.

I saw that Australians + New Zealanders would need the licenses (from
various WWW CB resources.)

They are wrong then. I will try to find out the sites and let you
know which sites tell you so.

Pro 26 is a triple conversion scanner, and gives you very clear
cellular images.

What I found out was that triple conversion usually would not be a
factor of receiving the cells, but often it would be because of IF
frequency or the frequency that the scanner handles (If you have a
scanner with IF frequency of 100MHz, and does not support 600-700 or
1000-1100 MHz, no wonder why you don't hear clear cell images !!).

I hope some one call help me. Any comments pro/con as to the quality of these radios??. Also how true is the 2-5 mile range?? I know it is terrain dependent, but in Mountains, what would be good guess.

Any good discounters of these type of radios. Lowest price I have found is $ 160.00/ unit.

In a previous posting last week I mentioned that the Washington State
Patrol dispatch freq (155.580) for north and east King County (Seattle)
had been converted from a simplex mode to a mobile repeater mode.

The input freq is 159.090 and pl tone is 100.0 hz.
Note: 159.09 is also used by the City of Enumclaw, in SE King County,
using a different tone.

I'm looking for a scanner/receiver that covers 1-1000 Mhz (give or take)
with no gaps and can do SSB as well as FM and AM. I don't need lots of
memories, scanning options or computer control (but they would be nice).
Older units are fine if they're functional - not too concerned about
cosmetics/accessories either. Prefer base/mobil style rather than handheld
but will consider anything that comes close to these specs if the price
is right.

Let me know what you've got. Can also trade for ham HF/VHF gear and computer
stuff if you prefer.

Aristotle: Radio Shack was recently selling the discontinued PRO-2026 for
$99.
It has 100 programmable channels, search and preprogrammed search features
and covers the 800 mHz band and aircraft. Call some local RS stores for
availability.
Unfortunately, your price range limitations will make it very difficult to
find a scanner (new OR used) that covers TV audio.

My information may be out of date, but I thought that what happened was that a relay or other device normally held in the closed position by the track current would drop to the open position when the track circuit was shorted by the passing of a train. The reason for this was to make it a "fail-safe" circuit since the relay drops and the signal would display its most restrictive aspect. The relay is specially made to avoid fusion of the contacts and the relay drops by gravity rather than by springs.

I thought that cab signals operated via some kind of inductive pickup located on the locomotive. This pickup would sense the signal in the rails (a pulsed DC current used to be used).
>
For whatever reason, NS, and possibly everyone

WEll, it's good to see you are finally realizing how nonsensical your initial statement was. I see you now understand that some scanners (cheap scanners) can hear cellular images but not all, and probably not most scanners and definitely not quality scanners. Glad I was able to help clear up this confusion for you.

Good luck - at Melbourne (and Adelaide too for that matter) Williams used voice inversion. Search around 155-170Mhz I think they used 168.??? but I'm not sure.

I heard (and taped) Shumacher and Irvine on 441.0125 and 442.0125 at Melbourne.

I used to get 8-10 pieces of junk E-mail per day from one lousy spammer
or another who use automatic E-mail name collection programs. I put the
X in front of my name and I have already seen a drop in unwanted
postings. It is unfortunate that it must come to this level but I saw no
other way to prevent it save eliminating my E-mail address and starting
anew.

247. CHANNEL SPACING

Newsgroup: rec.radio.scanner
Date: 1997-05-03 00:00:00 UTC
From: Roland.Stiner@cybernet.magsystems.com
Message-ID: <1e7_9705040130@magsystems.com>
Source record: 198660

A>Also, I remember when AM channel spacing was going to change to 9 kHz,
>from the 10 kHz spacing we had -- and still have. For some reason, that
>proposal/plan never materialized, but my brother still has the receiver he
>bought at that time. It's has digital tuning and a switch in the back to
>select
>either 10- or 9-kHz spacing.

That's there for when you go to Europe and Asia... 9KHz is the spacing
over there.

I didn't mean to imply that my statements were my convictions. I, too, believe that encryption/digital is the proper means to ensure privacy. My earlier statment was only trying to point out the (misdirected) reasoning that lawmakers used in passing the monitoring restrictions into law.

I believe that wireless industry will shortly end up all digital anyway, due to competitive forces. And, NO, I don't have any connections to cellular industry. I'm a 2-way tech for a govt. agency.

252. Sportcat Scanner Volume Modification

Newsgroup: rec.radio.scanner
Date: 1997-05-03 00:00:00 UTC
From: ellishfd@mail.ianet.net
Message-ID: <336abe61.6807682@news.ianet.net>
Source record: 198741

I am interested in finding out how to modify the volume on my Sportcat scanner. I need to raise the volume so I can hear the race cars at some of the Winston Cup Races. I know this can be done by companies that sell scanners, but I am interested in doing this myself. Please send me some email as how to or where to find the modification.

THanks

six minutes later, a posting about
RE: mobil scanner restrictions for OR, WA, ID. Any info?
contained a table of State Scanner Laws.

and four minutes after that, a posting about
Re: Scanner Legal in New York?
contained the same table.

It should be noted that the table is a copy of the summary "State Laws
Regulating Scanners" contained in the "Listener's Lawbook", written and
copyrighted by Frank Terranella, Esq and published by Grove Enterprises
(ISBN # 0-944-543-10-3).

While the table is very useful and deserves regular posting in response
to the recurrent questions, minimum courtesy demands, if not a full citation,
at least an acknowledgement of the source.

>I am looking for Border Patrol freq's in the Tucson, Arizona or Southern
>Arizona area.

Don't know about the Arizona area, but here in El Paso TX they are
fairly active on the following freqs:

163.625
163.675
163.725
163.775
164.115
165.850
165.925

US Customs Operates on:
165.235
166.640
168.825

I've heard some fairly interesting chatter on the Border Patrol Freqs.
Hopefully this helps...

$100 to $150 is fairly cheap as far as new scanners go. Both models
would probably serve you well. Occasionally Radio Shack has
drastically discounted a model when its been discontinued just to get
it out of stock. Sometimes, they'll do this with returned equipment
after it's been fixed and certified as operational. A friend of mine
bought one such RS scanner for $50. It works perfectly well,
especially since it's original price was almost $200.

It's the same old story....

go to http://www.altavista.digital.com

search for scanner radios

along the route you will find many sites to visit.
about twenty or so sites in you will find many sites
on scanning.

there you will find the laws explained about scanning
in various states...legality-wise

Plus it's a good way to discover what scanning is about.

bill conduit
etc.

268. $$ BECOME RICH SOON $$ PLEASE READ THIS

Newsgroup: rec.radio.scanner
Date: 1997-05-03 00:00:00 UTC
From: "Walter J. Thomas" <aag01@hotmail.com>
Message-ID: <5ke129$gi0@news.skyweb.net>
Source record: 198757

Subject: $$$$: BECOME RICH SOON !!

Dear reader,

PLEASE TAKE A MINUTE TO READ THIS, I'M RICH NOW AND YOU CAN BECOME TOO!

YOU CAN START YOUR OWN INTERNET BUSINESS IN YOUR SPARE TIME!!!

As you know the internet is growing at a tremendous rate. And
I'm sure you realize that millions of dollars are exchanged
for goods and services on the internet each day. Have you ever
said to yourself "I would like to use my computer too make
money" (or to make more money)??
WELL YOU CAN AND WILL MAKE THOUSANDS OF DOLLARS QUICKLY AND
EASILY IF YOU FOLLOW THESE SIMPLE INSTRUCTIONS!!!
The Business program outlined below is a simplified form of
E-mail marketing. Do not take this opportunity lightly, it is a
powerful tool that will allow you to have your own business
and start you on the path to financial freedom.

I KNOW THIS BUSINESS WORKS!! IT HAS WORKED FOR ME AND IT WILL
WORK FOR YOU. By the time you receive this business plan there
is a good chance that I will have been removed from the system.
But thats ok because I have already made a tremendous amount of
money using this system, and I would like to see your life change
as much as mine has. There is nothing more rewarding than
knowing that I have helped many good and honest people enrich
their lives. Follow the instructions listed below EXACTLY and
you will be on your way. Good Luck, and share the wealth.

Sincerely,
Walter J. Thomas

STEP1).
Get 5 pieces of 8.5"x11" paper and write:
"Please add me to your information mailing list"
Now take 5 $1 bills and fold $1 inside each piece of paper.
Place the request and money in 5 seperate envelopes and seal.
Carefully address the envelopes with the 5 addresses provided
below.(Be sure to include a return address and a stamp!)
Now mail the requests In a timely manner.

#1) Shari Davis; 1635 Manning Way; Colorado Springs, CO. 80919

#2) Gene Propp; 5121 W. 72nd Street; Praire village, KS. 66208

#3) Steve Wrubel; 3234 Nebraska Place; Costa Mesa, CA. 92626

#4) Rene van Ratingen; Akker 2 ; 6093 EJ ; Heythuysen ; Netherlands

#5) Walter J. Thomas; 244 5th Ave, 2nd Floor, New York NY, 10001

STEP2).
Copy this entire business plan and make the following changes:
Remove the #1 name off the list.
Place your name in the #5 position and move the other 4 names up. (#5moves to#4, #4moves to#3, #3moves to#2, #2moves to#1)
Your name is now the bottom of the list.

STEP3).
POST THIS ARTICLE ON AT LEAST 200 NEWSGROUPS!!!!!!!
E-MAIL THIS ARTICLE TO EVERYONE YOU CAN!!!!!!!
IMPORTANT NOTE: You MUST post this article to AT LEAST 200 newsgroups. There are about 45,000 newsgroups, with more being added every day. Each time you post on a newsgroup your message will be seen by many different people.
You should send this article via E-mail to as many people as possible. E-mail addresses are available for free through many sources on the internet. You can also purchase E-mail lists from several companies for a very small fee.
Remember it's your business and the more places you send it to, the better your chances of success! (I highly recommend that you send it out to more than 200 places).
REMEMBER TO PUT A CATCHY PHRASE IN THE SUBJECT BOX.

CONGRATULATIONS YOU HAVE JUST JOINED A GROUP OF ENTREPRENEURS!

Let me review why this works.....
Send out 200 articles and with a 5% response you get $10.
Those 10 people send out 200 and at 5% you get $100.
Those 100 people send out 200 and at 5% you get $1000.
Those 1000 people send out 200 and at 5% you get $10,000.
Those 10,000 people send out 200 and at 5% you get $100,000.
EVERYDAY THOUSANDS OF PEOPLE JOIN THE INTERNET!!!!!!!!!!

The above example is a perfect case scenerio. The response rate varies typically from 2% to 10%. To increase your success rate I suggest that you post this article to AT LEAST 200 newsgroups and send it to as many individuals as possible. Remember many people will see this article when it is posted on a newsgroup!! Also note that many of the people you send it to are likely to send it out to more than 200 newsgroups and people.

You don't have to retype this article every time you send it, just follow the instructions below and you will see just how easy this business is. If you follow these simple instructions there is no way you can lose. Every day several thousands of people get on the internet. Don't delay start today, you'll be glad you did!!!!!!!!!!!!!!!!!

POSTING TO NEWSGROUPS USING NETSCAPE:
1) Click on any newsgroup, like normal.

Then click on to " To News" in the top left corner of the
Newsgroups page. This will bring up a message box.
2) Fill in the subject box with a catchy phrase such as:
$$$FAST CASH$$$, ARE YOU THE PERSON WHO..., or the like.
3) Now go to the message part of the box and retype this letter
exactly as it is here. (The only thing you change is adding
your name in the #5 position and moving the other addresses
up 1 position each, thus removing the #1 name).
4) When you are done typing in the WHOLE letter, click on "File"
above the send button, then "Save as..." DO NOT SEND YOUR
LETTER UNTIL YOU SAVE IT!!(this is so you only have to type
this once).
5) Now that you have saved the letter, go ahead and send your
First copy!(click the send button in the top left corner).
6) THIS IS WHERE YOU POST AT LEAST 200 TIMES!!! OK, go to any
newsgroup article and click the "To News" button. Type in
Your catchy phrase in the SUBJECT BOX, then go to the body
part of the message box and place your cursor there.
NOW click on "Attachment" which is right below the SUBJECT BOX.
Click on "attach file", then find the letter you saved, click
once on your saved file, then click "Open", Then click "OK".
If you did this right, you should see your filename in the
attachment box and it will be shaded.
NOW POST AWAY!!!!!!!!!!!!!!!!!!!!!!!!!!!!

IF YOU ARE USING INTERNET EXPLORER:
1) Its just as easy, Holding down the left mouse button,
highlight this entire article, then press the the "CTRL" key
and the "C" key at the same time to copy this letter.
2) Now go to the newsgroups and press "POST AN ARTICLE", Type in
your catchy phrase in the subject box, and click the large
window below. Press "CTRL" and "V" and the article will
appear in the message window. **BE SURE TO MAKE YOUR ADDRESS
CHANGES TO THE 5 NAMES**
3) Now re-highlight the letter and RE-COPY it so you have the
changes...Then all you have to do for each newsgroup is
press "CTRL" and "V" and press "POST" it's that easy!!!!!

Thats it ! All you have to do is jump to different newsgroups
and post away. For both methods it only takes about 30 seconds
to post to each newsgroup. Once you get the hang of it.

REMEMBER THE MORE NEWSGROUPS YOU POST TO THE MORE MONEY YOU MAKE!!
YOU MUST POST TO A MINIMUM OF 200 NEWSGROUPS!!!!!!!!!!!!!!

You should start receiving replies within a week or so (sometimes
they come within days)

BE SURE TO SEND OUT $1 TO THE PEOPLE ON THE LIST PROMPTLY!!!!!!!!!

PERSISTENCE AND HONESTY WILL REAP YOU HUGE REWARDS!!!!!!!!!!!!!

DO NOT TO LET THIS OPPORTUNITY PASS YOU BY!!!!!!!!!!!!!!!!

FOR JUST $5 YOU CAN CHANGE YOUR LIFE!!!!!!!!!!!!!!!

REMEMBER: THE PERSON WHO DARES NOTHING, NEED NOT HOPE FOR ANYTHING.

Body handling: HTML body converted to readable text

```
Did you know that html in newsgroups annoys?
Please learn to adjust your newsreader properly or use a real newsreader.

================================
Here is how to turn HTML off in Netscape 4.0:

1) Start Netscape 4.0
2) Select menu "Edit, Preferences, Mail and News Preferences"
3) Select tab "Compositions"
4) Remove the check mark for "Use HTML Composition Window"

And at same time check...

1) That "Allow 8-bit" is checked
2) That "MIME compliant" is unchecked

Anyone been trying out the new 32 bit POCSAG decoder?

I downloaded it today & fired it up OK, however I am having a hell of a time sucessfully decoding messages. I have got a few bits and pieces, however the vast majority of signals (149.8875 MHz & thereabouts) are missed. I have played with the audio input levels for ages - no distinct differences.
My equipment:

PC: 486DX33 with 16MB RAM & SB16 soundcard
Scanner: Uniden UBC9000XLT
Freq: 149.8875 NFM, no attenuation, hi-cut etc
Ant: small whip (inside) - maybe a problem?

The received signals sound reasonable, all be it a bit noisy.

My company uses several pagers at this freq and they work great, even inside buildings etc, so I would be surprised if a decent scanner etc could not drag in an OK sigal.

Any comments???

Cheers,

Nev. Blyth

272. Re: How Do The Railroads Transmit Train Data? Please Read.

Newsgroup: rec.radio.scanner
Date: 1997-05-03 00:00:00 UTC
From: jdempsey@mindspring.com
Message-ID: <5ke8pj$uvj@camel1.mindspring.com>
Source record: 198761

The rails of virtually all railroads in the USA are electrically charged -- with a very weak current. The axles and wheels of the train create a short circuit which is electronically detected. Sometimes, to work on crossing signals or the block lights (those large traffic light signals which indicate whether a train should stop, etc.) the worker will use something akin to a set of jumper cables such as what you might use to jump start a car. The worker clamps one end of the cable to one rail and the other end to the other. This completing, or short circuiting, of the track circuit causes crossing signals to sound and cross arms to go down because the electronics thinks a train is there. Just as in a model layout, sections of rails are literally joined by insulated rail joints.

This information is normally electrically relayed to the railroad's dispatcher's office which usually has a track plan on the wall with lights which duplicate the block lights out on the real trackage. The traffic light looking signals are called "block signals" since they are located at periodic intervals, block, on the track.

Some railroads transmit this information via radio to the cab of locomotives. However these "cab signals" are expensive, and can sometimes give false readings in highly congested areas. Most railroads depend on the engineer to visually see the signals. Othertimes, the engineer is advised of what's going on by the railroad's dispatcher via radio.

As you can imagine, being exposed to the elements, the system is not an exact science. Heavy rains can short circuit the track circuit, as it is called, although this is relatively rare. However, some sections of track have a dual signal running through the rails. One signal is for the block lights. The other is to operate grade crossing arms and there may be several such protected grade crossings within a track block. For whatever reason, NS, and possibly everyone else, has repeated incidents of the cross arms going down when no train is around.

Additionally, railroads have "hot box" detectors, every ten miles or so on the Norfolk Southern, which sense the heat from overheated journals (axle bearings). They also have dragging equipment indicators which are essentially long pieces of metal which are located crosswise in the roadbed, usually secured to cross ties. These project only to about the height of the top of the rail. Anything hanging down from trains hit these, which are hinged flaps, tripping an electrical switch. This triggers a signal, sent out over the railroad's road frequency so that it is picked up by both the

dispatcher and the train engineer. Similar detectors are used before tunnels and tight bridges to detect cars which are too wide, such as if an open load of freight shifted, or too high for the bridge or tunnel. On Norfolk Southern's Alabama Division, and a lot of other places, a prerecorded voice message is sent out advising the dispatcher and engineer of the problem -- such as "6-6-3 dot zero dragging equipment, sixty-third axle." The 6 - 6 - 3 dot zero locates the detector at milepost 663. Similarly, once a train has passed with no problems, the "hotbox" detector sounds off "6 - 6 - 3 dot zero no defects."

Hope this helps.

No. The reason fake addresses are used is to stop junk e-mail. Usually
people put their real address in their sig. Using a fake address really works
to stop junk mail by the way. I get almost NO crap now.

26.995 is simply a gap between Channels 3 and 4 on the CB band....which
makes it THE CB BAND!!!! Anyone with a galaxy radio uses it with the 10K
switch, and other radios can tune it also (ex: HR 2510)

> If not, are there any other ways to mod it so that it'll get 800 and 900
> mhz range.

The radio won't easily pickup 800MHz. The CPU has provisions for it,
but the supporting circuitry is absent. I used to have one of these and
was able to speed the scan up a little bit - but only in the order of
about 25%.

The radios sensitivity on VHF-lo is unacceptably poor, as far as I'm
concerned.

IMO, the radio is not a good starting point for a super-scanner.

Cheers!

285. LAPD Tac Frequencies

Newsgroup: rec.radio.scanner
Date: 1997-05-03 00:00:00 UTC
From: Jon & Sarah <jsevers@sure.net>
Message-ID: <336B7CAF.75B9@sure.net>
Source record: 198774

Howard,

Tac-8 is now called the "Emergency Channel" on the new Astro Radios. The term "Simplex" is a button on the radio which enables unit to unit (or airship in this case) transmissions. The distance is very short, 3-5 street blocks only. We used it for tactical situations only and Communications can't hear us because it doesn't transmitt via the repeaters (duplex). We at LAPD can switch to simplex on any of our frequencies. When it gets real busy, the airunit likes to switch to the emergency channel and talk to the ground units because this channel is always clear. We have to use simplex or communications will ask if you have a emergency if we accidently transmit on duplex.

Hope this clears it up...

Jon

You amuse me, Barry O'Grady. Your knack for correcting the mistakes of others is priceless. Is it something you were born with or did you have to work at it? You are an excellent typist and have fine grammar and spelling skills. There are so few precise people left in the world. It is good to know you are here working tirelessly to keep preciseness alive.

How can you stand to listen to a scanner, though? The people who speak on radio are just dreadful. They have bad sentence structure, half finished ideas, poor enunciation, and you cannot tell if they have properly capitalized or spelled their words correctly. It must annoy you tremendously.

Keep up the fine work, Barry O'Grady.

Randy-
The 2035 was quickly replaced by the 2042. The 2042 had some CPU improvements and a bit better sensitivity. Get a OptoScan OS535 interface board, Probe v3.0 software and a good preamp and you will have a fantastic base setup. The Pro-2035 w/ the OS535 is the same as a Pro-2042 w/ the OS535 (except a little less sensitive). I have the 2035/OS535/Probe setup and really like it.

Wiggie

>radio,is it a good or bad scanner.

JbJr-
I have a BC230xlt and think that it is an excellent scanner for my area,
but I do live in a rural setting. In a busier city, it does have some inter-
ferance problems when you are trying to scan/search the 800-900 Mhz freqs.
It is very fast, 100ch/sec. scanning and up to 300steps/sec. when you
are searching in the lower frequencies.
The display light is very good along with the battery life. I sometimes
can get up to 8-9hrs on a charging. It also has some service bands already
programmed in to it. If you are traveling and see a firetruck on a call,
just go to FIRE/EMG mode. It will usually find the frequency quite fast.
The main things that I want to point out to you is:
1. Not the best in bigger cities
2. Not the most sensitivity, but does a decent job
3. You could probably do better in price...under $200
(you might try the net...$140-150 and I got one at
a pawn shop for $70)
4. A triple conversion scanner (Pro-60)can be had for about $199
on sale at RadShack.
5. I does get cell images ~896-913Mhz
e-mail me if you have any other questions.

299. best mobile antenna question

Newsgroup: rec.radio.scanner
Date: 1997-05-04 00:00:00 UTC
From: joe.sadlek@memprime.com
Message-ID: <9705060315261236 2@memprime.com>
Source record: 198588

I have a Radio Shack mobile scanner in my car. I just moved it from my old car to my new car. When it was installed in my old car, I used an antenna splitter from Paradynamics. It worked great. I tried using the same antenna setup in my new car and the reception was bad for both the scanner and the radio. So, I now have taken a 12 foot piece of antenna extension and stripped the insulation and copper braid off down to about 3 feet from the end. The covered end I connected to the scanner and the exposed, insulated center wire, I ran behind the mouldings next to the windshield, above the door, and down the back of the roof. The reception is better than what I got with the Paradynamics splitter but not as good.

My question: Is there a way to tune this sort of antenna for better reception?

Joe

Wrong again, diode-breath! :-)

Tandy did not found Radio Shack. Tandy *bought* Radio Shack in the late 60s/early 70s.

It depends on what you nee. A diskcone has no gain. It does offer wide
bandwidth. Tandy claims 25-1300MHz. Below about 50MHz a vertical
performs much better. Below 30 (10mtr ham band @28 and CB @27) the
tandy diskcone is practically "deaf". From 50 up it does as good as you
can expect. But if you are wanting to listen to weak mobiles, 4 counties
away, go for a beam. Groves Logperiodic does a good job. But you have
to aim the beam in the general direction of your target. I am a ham and
I have (or had at various times in the past) 1/4 wave ground planes for
6mtrs/2mtrs/70cm (50/146/440 MHz) and compared the diskcone to them. For
ground based stations there was no difference. For satelites (NOAA wx
"birds") the diskcone showed really wierd responses as a satelite went
head. Much deeper nulls that the 1/4 wave ground plane until it gets up
about 45 degress, then the gp would just lose the signal all togather, and
the diskcone would still give you some sort os signal. (but antennas for
fast moving Low orbit satelites is a specialty into itself) But in
comparing the diskcone to a "gain" vertical, a 5/8 wave "mobile" antenna
(for 146 and 440) the 5/8 has a lot more gain. Mobiles that are lost in
the noise on the diskcone (or to be fair a 1.4 wave GP), are "load and
clear" on the 5/8 wave.
I have had an Archer cat no 20-013 up since January 1988 and it has held
up very nicely. Get the best coax you can afford. After all, since the
diskcone has no gain, why loss any uV of those signals.

Even so, if someone wants to listen to conversations bad enough, & are technically inclined, they will come up with a way to get around the scrambling signals, digital or otherwise. Any cordless &/or cellular phone is a radio transmitter, so anyone should know what they're getting into. those people who were fined for listening to Newt Gingrich's Cell phone calls. Can anyone tell me with a straight face that those prople would've been fined & treated the same way if they had listened to the phone calls of Joe SixPack their neighbor instead of a Washington Political Insider with all kinds of connections? If you can, please contact me, & I'll get you a GREAT deal on a couple of bridges in New York City. I'll also throw in my beachfront property in Montana.
I've listened to calls in the past & will do so in the future. How can I be told what I can do in the privacy of my own home?

73's, & Happy Scanning

>happeds that Radio Shack has their discone on sale this week. Can anyone
>give their opinion on its performance. It is only $60

The dweebs at RS are wrong again. $60 is the regular price. If you want
a discone, spend the extra few bucks and get the Diamond. The RS version
is a cheap imitation that lacks the upper vertical element. Result?
Lousy performance on low band. That IS important since this is where you
can hear your neighbors on 46/49Mhz ;-)

Hi, I have a radio shack handheld frequency counter for sale.

1MHz to 1300 MHz

It was purchased last september and is in mint condition.

I am asking $65 for it plus $3 for postage.

Thanks,

Scott Sidener N0WFL

321. Pro-51 vs Pro-60 observations!

Newsgroup: rec.radio.scanner
Date: 1997-05-04 00:00:00 UTC
From: randybu@gte.net
Message-ID: <5khigt$7n1$1@hourglass.oz.net>
Source record: 198680

This is just one person's opinion of both of these models...mine!

A few months back, I purchased a Pro-51 when it was on sale in February. I became familiar with it's functions and was comfortable using it.

Then, last month, RS had the Pro-60 on sale for the same price I paid for the Pro-51. However, it had more band coverage than my Pro-51. It had FM, Military, and one or two other bands the Pro-51 didn't have.

So, I figured I'd get one and try it out and compare. If I liked the Pro-60 better than the Pro-51, I'd keep it and sell the Pro-51..hopefully at a small, if not any loss.

I get the Pro-60 home and first find that the charger/adamptor that fits my Pro-51 also fits the Pro-60. That's nice; I won't have to buy a new adaptor. That was interesting considering the Pro-60 requires 6 batteries while the Pro-51 only requires 4.

I take a quick glance thru the Pro-60 manual to look at the description of the frequencies it covers plus other things which may be different then the Pro-51.

Anyway, with the Pro-51 fully charged on it's rechargeable batteries, I used the adaptor/charger to power up the Pro-60. I do a little programming and let both of the scanners go....

After two days of playing with these scanners side by side, I made a decision....I returned the Pro-60 and plan to keep the Pro-51, at least for now.

Here's why:

What I LIKED about the Pro-60

- I liked the fact that it used the same charger/adaptor as the Pro-51
- I liked the increased frequency coverage...sometimes TV audio would be handy.
- I liked the absence of the infamous squelch tail the Pro-51 is famous/bashed for.
- I liked the ability to easily turn on or off the key beep.

What I DID NOT LIKE about the Pro-60 whiich I became used to on the Pro-51

- The Pro-60 keyboard layout is much different. The keys are not as functionally grouped as they are on the Pro-51. I can pretty much use the Pro-50 with my eyes closed. Specifically, the Limit and Up and Down Keys are adwardly arranged on the Pro-60. On the Pro-51 they are conveniently the last row of buttons on the right side, with the Limit button in the middle of the

Up and Down keys.

- The Pro-60 does not have pre-programmed search bands for weather, air, marine,and police. This is very useful to me when I travel to different locations. I don't have to do a Limit search everytime I go somewhere. I just do a band search...Very, very convenient.
- To continue with a Limit search on a Pro-60 you have to hold down the Up or Dwon keys for more than just a tap. On the Pro-51, you just tap the Up or Down key on a Limit search and the scanner continues till it finds a signal. Then, you tap an arrow key again to continue, and so on.

So, if the Pro-60 had those same features I've come to like in the Pro-51, I would have kept it. Although, the Pro-60 does have the advantages I stated above, they don't overcome the features of the Pro-51.

Those are just objective observations about both scanners which I used to decide to keep one over the other.

If this information happens to help someone else make a decision, great. Otherwise, it just one person's opinion for the taking.

Randy

I agree! Actually, I emailed the company recently about this and they said that a new software V 2.0 will soon be released which will correct this plus some new features such as spectrum analyzer.
I found them quite co-operative. According to them, the upgrade should be available on their web site http://www.winradio.com before the end of May for free download.

I have been using it for nearly a year and love it.
The software has been upgraded a few times.

The missing frequencies are blocked by firmware in the CPU.

There is also an optional database program available.
The unit comes with a good documentation how to write your own
software.

I have new in box several Motorola Model # NSN-6027 12 Watt Power Speakers. These units are great for Scanners, C.B. and all Portable or Mobile Radios. All you have to do is wire in the speaker connections to a mini jack and the other wire to a 12 volt source such has your car lighter. It's easy & simple. Speaker list price is $ 120.00. I am selling the remaining stock for $ 40.00 each plus shipping.

This couple probably thinks they got the raw end of the deal. When they
didn't. If this was anyone of us, we would have gotten an even bigger
fine & or more then that along with it. But I believe that these people
were working for the Democrats & that is why they got lucky.
Other wise they might have gotten what they deserved. But if this cell
phone industry wants to make their customers phone conversations
private, then they have to scramble them. Because unless they do,
scanner listeners wil always be in on 1 of those freqs.

> Does anyone still listen to SCA commercial free FM???
> I'm thinking of buying the Ramsey SCA decoder kit,
> does anyone have any comments?

Yea,

I bought the ramsey kit a few years ago. It works. Don't believe
the BS that it can tune the several subcarrier frequencies in use. It
does have a tuning knob on the front that controls the phase-lock-loop, but
it also has a big honking analog filter in front that limits it to one
subcarrier frequency (66 khz, I think). I did an analysis using
SPICE that showed the filter was quite steep and acted to block
any other subcarriers. Ramsey will tell you how to modify the
front end for other subcarrier frequencies (at least they did a few
years ago).

A friend of mine found a guy who sells little 1 inch square SCA decoders
that fit in your radio, prebuilt. Sorry I don't remember the name,
but that decoder was better than ramseys. This was all about three
or four years ago.

Have updated error messages to provide more information. Basically
an error 4 means the device is already open. If no other apps are
running that use sound, it means your wave driver does not support
full duplex. For Sound Blasters, full duplex drivers are available
on their web page at http://www.creat.com.

I don't know about two years, but the fellow who developed the system that Uniden is using to track the Motorola systems told me a couple of weeks ago that the Ericsson patents are much tougher to get around. There are a couple of people working on it, and apparently making progress, but it hasn't been done yet.

Well I bought one at Wal-mart, of course the speaker is not modified.
My friend bought one (SC150 that is) also, from Racing Electronics which
claims to be audio modified. We tested them side by side and could not
tell any difference between the two. I wouldn't waste my time with
modifying the audio output. I also have a BC3000xlt--sure wish I could
modify its audio.

351. Opinions re. Ramsey Downconverter kit

Randy,
I own one as well, and I don't think it's a dud at all. For one thing, it's 1000 channels, with fairly wide coverage.
But, one of the best things about it is the Optoelectronics OS-535 daughterboard you can put in it to interface it with your computer. Imagine virtually unlimited channels, hot-selectable configurations, and about 120 channels per second scanning rate (with Probe v3 software).
In short, I think it's a great scanner. :)

Sincerly, and good Scanning,
Robert McIntyre

Try 156.350 mhz, this freq. is for USCG Traffic in N.Y. Harbor. You will hear
ferries and other water craft check in with their departure from a specific
place and their intended destination. Traffic will respond with the any craft
they should be aware of in their general area.

Source record: 198714

Phil,

What your hearing isn't a image, but rather your neighbors are using a European cordless phone or a European room monitor. I checked a European freq allocation chart and it gives the 148-149 MHz range to devices that operate with under 100 Mw of power. Some other freqs where you might find cordless phones are in the 1.700 MHz range, these phones are generaly from South America.

Good Luck

THE 69TH ANNUAL ATLANTA RADIO CLUB'S HAMFESTIVAL

The Atlanta Radio Club's Hamfestival on June 21-22,1997 is
the Southeast's premier hamfest.This hamfest is brought to you
by the Atlanta radio club,with the help of many of the local
radio clubs here in the metro atlanta area.This is our club's
69th annual hamfest,and with your attendance we hope it will be
our biggest and best to date.
This years event on June 21-22,1997 will be held at the
Atlanta City Hall East-Exhibition Center,675 Ponce de Leon Ave.This is
the same great site as last year's hamfest,which is near the downtown
area,and very easy to get to,and plenty of free parking.
On the days of the hamfest,we will be usings our clubs repeater
(W4DOC 146.82 Mhz minus 600Khz offset) on top of the Nations Bank for
talk-in.This repeater is used every Sunday night 8:00 pm for the
Atlanta Radio Club's net.If you are in the area your presence on the
net is welcomed.
For much more information about our Club and Hamfest plese check
out our web page at http://www.saf.com/arc.The club's BBS at
770-850-0546 has a lot of info also, or send email to dickb@akorn.net
our regular address is ATLANTA HAMFESTIVAL
P.O. BOX 942150,Atlanta Ga. 31141-2150
No matter what your interest in the radio hobbies are,you will find
you came to the right place.Amateur Radio,Shortwave radio,Scanners,
Satellite radio,Emergency radio,Marine radio,Military surplus
radios,etc.AM,FM,SSB,CW,PACKET,RTTY,SLOWSCAN,FAX,DX,ATV,AMTOR,EME,whatever
your interest this is the place to be.If your into building or
homebrewig equipment,radio or computer this is the place to find those
hard to find parts and gizmos.
The computer hobbies are doing better than ever and these interest
will be well covered at the Hamfest.
Buying,Selling,Trading,Swapping,Dealing,Bartering,Giving will all
be happening at the hamfest,probably some begging also.Whether your
coming with money to buy,a load of goods to sell,or just looking
around this is going to be a great hamfest.

The Atlanta Radio club has our regular meetings the first Thursday
of each month.These meetings are at 7:30 PM,located at the Georgia
Power Fedral Credit Union, 4900 Ashford-Dunwoody Rd.this is near the
I-285 loop on the north side of the city.
The Atlanta Radio Club is a non-profit organization wishing to
promote Amateur radio to all interested.
Our club president is Bill Bass W4LFC ph# 770-493-8438,his email
address is BillW4LFC@juno.com ,our vice-president is John Talipsky,Jr
KA4VQH ph#770-925-7110 his email address is johnka4vqh@juno.com ,our

club Secretary is Penn McClatchey K4PE ph#404-605-0742 his email is pmm@saf.com our Treasurer is Charles Golsen N4TZM ph#404-252-3303 his email address is cgolsen@atlanta.com ,our clubs activities manager is myself Richard Dean Young KR4IU ph#404-622-8433 my email address is rychard@atl.mindspring.com ,the opinions expressed are my own and are probably bias due to my love of the radio hobbies.
Hope to see you at the hamfest soon.

05-97

May is here already! The months go by entirely too fast...they should have about 45 days each so I could get things done. I try to get the column out on time...but each time I start a project there are at least two earlier unfinished jobs that jump into the ring with me. As I attempt to wrestle them into submission, they begin ganging up on me, more jobs join in, and the fight is on. It progresses geometrically.

Anyway, you get the idea. Nothing ever gets completed on time around my house.

Dale submitted the following details. Kansas Wildlife and Parks has been confirmed on 39.780, and is suspected to be on 151.295. Also, the Drug Enforcement Administration (DEA) is getting ready to put up a repeater in Garden City, but the frequency is unknown. Finney County Emergency Mgt. is waiting for a new repeater that will give coverage to the east end of the county. The input/output pair is 153.815/155.895. Garden City is entertaining the idea of buying a trunked system...again. His note indicates that their current system is overloaded. Earlier, they applied for a UHF frequency for the electric utility, but canceled the project. Dales indicates that the new repeater pair (Emergency Mgt.) might be shared with the Sheriff's Office, and the current Sheriff's frequency (154.725) will be grabbed by the PD. Sounds confusing to me, but that's the government for you! I guess it depends on what Garden City does with the trunked system idea.
KHP centralized dispatch is gathering momentum. Six consoles have been ordered, and Troop C tower sites are being arranged. As is often done in government, the bids are part of a package deal that include equipment for Troops C,D,E & F. Dale says, "800 MHz will be out west sooner than we thought!" Look for completion in 2-3 years.
A last minute letter from Dale had a list of new "signal 5" codes that KHP will be using. Currently they are active in Troop A, but neither he nor I can verify use elsewhere. Here they are:

Signal 5A: Known Offender Felony
Signal 5B: Known Offender Misdemeanor
Signal 5C: Known Offender Traffic
Signal 5D: Known Offender Drugs
Signal 5E: Known Offender Explosives
Signal 5F: Known Offender Fraud
Signal 5G: Known Gang activity/affiliation
Signal 5H: Infectious Disease (HIV, Hepatitis B, etc.)
Signal 5I: Illegal alien

Signal 5J: Juvenile runaway
Signal 5K: Known Offender Kidnapping suspect/subject
Signal 5L: Known Offender Larceny
Signal 5M: Known Offender Homicide
Signal 5O: Other (call dispatch)
Signal 5P: Parole/Probation
Signal 5R: Known Offender Sex offender (rape, molestation, sodomy, indecent exposure, etc.)
Signal 5S: Known Terrorist activity/affiliation
He recommends listening to the following frequencies for cloud seeding planes during severe storms:
122.850 aircraft to ground
155.100 radar ops to aircraft
Apparently they have installed another radar unit in Colby providing coverage for the northwest corner of the state.
Those of you near the Denver border might take note of what Dale discovered while in Denver. The Ericsson system there is a pain to monitor, but there were lots of other things to hear. (As I recall, there are many large suburbs there.) What distresses him most is that the State of Denver is contemplating a statewide digital (Dale says he hates that word) 800 system.
Last, he has some ideas for a law he would like to see introduced to the Kansas Legislature. It would involve the improvement of mutual aid communications for the state. He didn't have time to put any details in this letter, but I hope we'll get to see them in the coming months.

Thanks, Dale...keep the details coming our way.

Bob M. dropped off a package to me that had the frequencies and floor diagram of the Shawnee KS Emergency Center at Shawnee PD. It is manned by Shawnee ARC members during severe weather. It consists of eight control stations all acoustically isolated from each other. The antennas are on a 150 foot Cellular One pole behind the station. The diagram is impossible for me to reproduce on the Internet, so if you would like a copy send an SASE and I'll get it to you. The frequencies are next.

Now&#65533;a public apology to Bob M. and a few others. When we discussed the tour of the Johnson County Fire/EMS dispatch center, I forgot to notify those folks that are not computerized yet. I told Bob I&#65533;d make sure he and I would go there for another walk through sometime. Again, I apologize.

For those that didn&#65533;t make the tour, we hoovered up some pizza in Shawnee at about 7:30 PM, then descended on Fire/EMS dispatch about 8:30 PM. I had made arrangements with one of the old-timers there, named George (you regular listeners would no doubt recognize his voice) several weeks ahead of time to plan on us. When we showed up, I found out good ol&#65533; George didn&#65533;t get the message passed on. Suddenly about a dozen folks sauntered in and took the place over. It was no big deal for them&#65533;they enjoy tours and it was perfectly OK for us to be there. I just like to razz George when I can. (He helped train me when I worked there, so this is a little payback time!)

We found out that they have an Ericsson trunked radio for listening to various KCMO FD channels. They often do mutual aid with each other, so it is beneficial to have that equipment. They cannot transmit on them. Additionally they have the capability to monitor a few Prairie Village and Overland Park PD channels. Since Fire/EMS dispatch covers the entire county they need these toys that the rest of us would simply like to have for fun.

Hanging from the ceiling is a 50+ inch projection screen TV. They can display their CAD screen on it, the weather channel and the news, and they even guessed that they could watch regular cable TV and/or tapes on it. When asked if they ever watch Robocop or "Friends," they all said, "No, no&#65533;we would not do that."

Another tidbit involves how the ambulances communicate with hospitals. Normally, they call in on Med 10, 462.975 and asked to get patched to a particular medical facility. The dispatchers press the buttons and magically they are all hooked up. Some of the units now use a cell phone and call a certain number that automatically patches them to the correct hospital. All this goes through some electonics at dispatch so it can be recorded, of course, but otherwise it involves no dispatchers. This is probably a blessing because when it gets really busy the med channel dispatcher has their hands full. It allows them to get on with more important duties, like not watching Robocop and "Friends." (Just kidding!)

Remember the EMWIN (Emergency Manager&#65533;s Weather Information Network&#65533;or something like that&#65533;) network discussed a few articles ago? That is the system allowing anyone with a PC and a cheap interface to receive all the weather information from the weather satellites. Dispatch has a dedicated computer for that, too.

We were allowed to poke around in the equipment room, but they drew the line when we suggested they let us make some adjustments. The dispatchers there were very gracious and informative&#65533;even though we surprised them. Having worked in the Johnson County area for over 15 years, I feel comfortable saying that they are about as professional and efficient as a dispatch center gets. Thank you ECC!

Last, we hear from Dennis in Kansas City, KS. He bought the new Relm HS 200 portable scanner. He sent some of the specs along with some of his experiences with it. 200 channel, 10 banks, 10 priority channels, PL/CTCSS and DPL/DCS decoding, birdie lockout, priority scan with hierarchy and a host of other goodies. The literature says it will scan up to 100 channels per second. I�m not personally familiar with how it all works, but Dennis says with the DPL/DCS feature, he can follow KCK�s Motorola trunked system quite well. He says its like sitting in a police car. (I hope you mean the front seat�not the one behind the cage!) His note to me was written after a mere 24 hours of ownership, so he�s just getting to know it. For those of you that have one and live in the area, he found the DCS code for east patrol�"INV174." Dennis, you�re a step or two ahead of me with that radio�but if you want to let me borrow it for a month or two, I�m sure I could get to understand it better!
He said that as he collects more data on KCK�s system, he will pass it on to us. I think that with radios like the HS 200 and the Uniden BC235 the scanning world is going to get turned on its ear and become quite interesting. Thanks Dennis�keep us informed.

Thanks to all who submitted info for this month. I�m going to get this sent out today if all goes according to plan. (See first paragraph�)

Andy

The BC230 is a good radio but is only dual-conversion and
can produce lots of interference in nasty RF environments;
especially large urban areas. You should also check into the
RELM HS200. While having a few less features than the BC230,
it does decode CTCSS/DCS and has much better intermod and
image rejection besides having a backlit keypad. I personally
think the HS200 is a better value. If you are interested in
this unit, I did post a review of it a few months ago and
it can be found on my web pages listed below.
For a little more money, Uniden will be soon introducing
their new BC235XLT which promises to be a revolutionary
radio in terms of tracking 800MHz trunked systems and having
a more sensitive receiver that uses triple conversion.
Best of luck!

368. Best Base Antenna And Cable

Newsgroup: rec.radio.scanner
Date: 1997-05-04 00:00:00 UTC
From: Tommis <tommis@matrix.uti.com>
Message-ID: <336D4452.2F24@matrix.uti.com>
Source record: 198727

I Will be buying a antenna for my 40 foot tower and would like your input on buying the best antenna under $200 Also what about cable? I will need about 80 feet and looking not to cheat on the cable. will spend extra on the cable. Low band is important to me besides up to 956Mhz. Please let me know what you are using and how you like it. I live in a rual area and will be using it with the bc9000xlt. Thanks Tommis

> Otherwise, it just one person's opinion for the taking.

Randy,
Nice analysis of these two radios! I do agree that the
method of holding down the arrow keys to perform searches is
a pain, but feel this is negated by the Direct feature which
I find very handy!
One thing to keep in mind is that the Pro-60 is much better
at image and intermod rejection due to its triple conversion
and better filtering. Take the Pro-51 into larger urban
environments and 800MHz scanning is intolerable.
With your permission, I think this analysis might be useful
to others and I would like to post it on my User Opinions
page. For further details, take a look at my web page below.
Go to Radio Monitoring and find the User Opinions link. Have
a read and let me know. I look forward to your response.
Thanks and happy monitoring!

I know it is not the software, but thought I should share my results with anyone who is interested in this project. I was very interested in the l0pht POCSAG decoder, so I gave it a shot. I've build the decoder exactly as it described in the article. For testing I used PRO-43 and PRO-2026 scanners and PD - POCSAG Decoder v2.03 (shareware) software. When I run the software and adjust the volume to the certain position I get 100% of clear signal from the decoder, but about 90% of all messages, digital and alpha, are garbled. Although when I receive the other 10% of digital or alpha signal it works great, specially alpha, I can see all the messages perfectly fine. In the article they are talking about using "R2" 10K and "R3" 100K potentiometers instead of "R2" 10K and "R3" 100K fixed resistors to adjust the signal for best output. I am going to try that next. If interested I will post the results.

Please not signiture line.....

Will this work for the BC220-XLT? If not, do you know of a mod for the
220xlt that will allow full 800 coverage?

I have a new ICOM R10 that I am attempting to use with ScanCat Gold. Is anyone using this program with this receiver and if so does is work well for you? I can't seem to get mine to download or upload into the radio's memories. I can however, enter a single frequency to the radio's VFO. I think it is just a glitch or something that I have overlooked, but I have been unable to figure it out. Does anyone have any suggestions??

I have finally completed my discone, except for one part, the virtcle element. I am stuck in choosing its legth! I mainly listen frequencies within the 46 rang as well at 145 rang. What length should the verticle element be for these two frequency ranges? Sorry if this seems like a simple question.

One last thing, should I actually ground the antenna even though all its used for is receiving?

What really pulls my chain about RS (I go there for connectors and not much else usually), is if you buy something like a scanner, phone, etc., they always bring up the service contract and then proceed to hound you like a dog in heat to buy the darned thing, when you say no the 1st time. One droid went so far as to ask me if I had "never dropped anything in my life and broken it?"... Completely out of line, he got reported to 1-800-the-shack for what good it did.

382. Icom R-10 New for AR-8000

Tired of your AR-8000 and wish to trade for something new? Icom R-10, brand-new in the package. Sales slip available from US Dealer. Not interested in poor conditioned 8000 unit. Looking for equally good conditioned AR-8000 with Scout Interface and birdie mod. 800 Mhz not required. However, do want US version w/ 10 khz steps in AM Broadcast band. Dealers welcomed.

US version. R-10-05 Non-modified for 800.

Includes hard to find Icom data cable and Icom's programming software. Made to shake hands with the Opto Scout by the mfg, out of the box.

1000 memories. AM/FM/LSB/USB user selectable.

For excellent review, see article by Rich Wells.

>220xlt that will allow full 800 coverage?
>
(snip)

No, the cell mod for the 200xlt does not work for the 220xlt. You can do a virtual downconversion and recieve cell freqs, but it is not worth it. Just tune into the cell images 896-914Mhz and you will hear just as much as a 200xlt with the cell mod.

E-Mail Your Way To Riches!

Dear Friend,

We all know E-mail is here to stay. It's fun, easy and exciting! Would you be interested if we could show you a way to make well over $1,000 per week doing it?

This is not a joke. You may have seen many people trying to tell you that you can make money by joining this or that scheme! Guess what, you decide to go for it and then you get nothing but frustration and disappointment! We are here to take your frustration and disappointment into an Electrifying Adventure!

We have been marketing on-line for almost 2 years now! We have never spent one red penny on advertising and made nothing but profits. We can show you how to make money every day of the year. Many people may think this is untrue or it just can't be done. We are here to tell you that it is absolutely not true. The biggest mistake people make about marketing on-line is that they sit and wait for people to contact them. You will never make it if this is your approach and we'll tell you why. There are over 60 MILLION people on-line right now, and seven new people logging on every minute of the day world-wide and everyone is offering something. So how do you get a potential client or a new customer before your competition does? The answer is simply " Creative E-mailing" and it WORKS! I'll tell you why. You're taking your product, service or idea directly to the market instead of waiting for the market to come to you!

Here are a few testimonials we'd like to share with you (They're all 100% TRUE!):

Internet Communications, my wife and I owe you so much. We ordered your Creative E-mail System and within the first week we received over $1,150 in orders for my Internet Consulting business!
--Charles -- California

I have bought two so-called E-mail programs that cost me over $600.00 when I received them. They were extremely difficult to operate and it took me about two weeks to figure them out. Once I did, they were so time consuming it just wasn't worth my time. When I received your course it took me about four minutes to install and I was in business! Within the first 24 hours of my first E-mailing I received over $580.00 in sales over the phone. That first week I grossed over $2,000.00! I really can't believe how easy you made this, anyone can do it! Thanks!
--Dennis -- Illinios

Hello, I'm a divorced mother of two children. I wanted to thank you for helping me out. This was my first time buying anything on the Internet. I was skeptical at first but I figured I'd take a chance. This was the best chance I've ever took! My part-time business is now a full-time home-business, thanks to your

Creative E-mail System. I had to hire my two family members to help me out!
This is GREAT, thanks so much! I'd recommend this for anyone!
--Ellen -- Florida

You may have seen other people offering products "E-mail Programs, E-mail Addresses, Extractors, Etc." The vast majority of these products are very over-priced and very difficult to even use. None of them even supply you with current, up-to-date, FRESH & RESPONSIVE E-mail addresses! Our Creative E-mail System puts everything into one package to make your profits soar immediately! Even if you do not have a product or service to offer, we are going to give you over 500 how-to reports that you will have full reprint rights to! What makes our course different from anything else being offered anywhere is that we're dedicated to your success! We do not succeed unless you succeed! All of our E-mail Address Databases are created in house. We do not trade our databases with anyone because people are selling extremely bad lists on the Internet. Many of other people's databases are filled with duplicate addresses and many of them are undeliverable. We keep our own database so we know exactly what we have and we keep nothing but the best. There's no other way. We believe in producing high quality products that should be priced reasonably for your success! Read on to see the special bonuses you will receive.

******** SPECIAL 10 DAY BONUS ********

If you order within the next 10 days we will include:

1) 500 How-To Reports (You may resell these at any price)

2) Your Personal Complete Guide To The Internet -- This 175 page e-book covers every single aspect of the internet. You will never have to buy another internet book! When you complete this book, you will know more about the internet than 90% of the people online right now.

3) When you purchase our 8 MILLION SUPER responsive E-mail list we will include Mega-Mailer. It sends 250,000 E-mails per hour! All other orders will receive Pegasus Mail. It mails about 30,000 per hour.

Here's how to get the Creative E-Mail System:

All orders are delivered on CD-ROM or 100mb Zip Disk (Iomega).

============> E-Mail Databases <================

2 Million FRESH E-mail Addresses only $ 99.95
4 Million FRESH E-mail Addresses only $179.95
6 Million FRESH E-mail Addresses only $249.95
8 Million FRESH E-mail Addresses only $299.95

You will be sending your Marketing Letter to 2, 4, 6 or 8 MILLION People! To mail to 2 MILLION People by U.S. Mail at $.32 per stamp would cost $640,000.00, not including envelopes or paper! The price of 2 MILLION E-mail Addresses isn't even a fraction of the cost. And the great thing is that if you have 10 products, you can E-mail to your list as many times as you want to! Your profits will never stop soaring! Don't pay someone else to send your

advertisement out, do it yourself and save big money! The average cost right now to send your ad one time to ONE MILLION people is $1,400.00. You can send it 100 times to EIGHT MILLION people for only $299.95 and that includes Mega-Mailer that sends 250,000 per hour!

:> radio.
:
:I saw that Australians + New Zealanders would need the licenses (from
:various WWW CB resources.)
:
:They are wrong then. I will try to find out the sites and let you
:know which sites tell you so.

Here in Australia we have gone through several phases with CB radio.
For a long time the government was determined that there would be no
CB radio service in Australia so some of the US frequencies were
allocated to other services. When CB radio was finaly introduced it
was an 18 channel service with 16 of the channels using the same
frequencys as the US system plus 27.095 and 27.195 Mhz. Later it
was changed to match the US 40 channel system.

Licenses were required and went through several phases where we could
at first licence one radio at a time and then up to five on one licence.
Now CB radio in Australia is covered by a class licence and it is only
necessary to purchase a type approved radio and you are on the air.

:
:> You can listen to cell phone images on any dual conversion scanner
:> even if blocked, But you cannot on a triple conversion scanner such
:> as a PRO-60 (I know PRO-60 images around 140mhz).
:
:My experience tells me that -in my area:Italy- there are at least two radio
:services hard to NOT being received (!): the commercial FM 88-104MHz
:broadcast and, guess what, the 900 MHz cellular phones.

That's interesting. Are these 900 Mhz cellular phones the same type as
use 800 Mhz in the US and Australia? I would have thought that the
analouge cellular frequencies would have been standardised to allow
for international roaming.

:I always put a notch
:filter for FM broadcast, and it works, but I get strong interference in my
:triple conversion Uniden UBC9000XLT from a 1/2 mile far away cell site. I
:can't get rid of these annoying cellular images in the 427-440 MHz range even
:using an internal antenna and the attenuator.

Couldn't you use a notch filter for the cell phones as well as the FM
broadcast band?

When I decided I wanted a better handheld scanner I purchased an AOR
AR1000 (or was it 1500?). However I was unable to scan cordless phones
on 30 Mhz with it because of FM broadcast interferance. My PRO-2004
does not have that problem but I suspect thst the UBC3000XLT I use now
suffers from FM radio interferance to cordless phones mildly.

:My portable IC-R10 is far
:immune from both kinds of interference, and it is a triple conversion as
:well. I'm not saying the IC-R10 is a better SCANNER than the UBC9000XLT
:(they are intended for different use and, personally, I prefer the Uniden)
:but I'm stating that triple conversion isn't enough to get a good RECEIVER.
:And there is at least one triple conversion (my UBC9000XLT) that actually is
:able to receive images from cellular band.
:In the meanwhile, I ask to all readers if any modification of UBC9000XLT
:could improve its image rejection: I would like to receive cellular phones
:only when the display shows 9xx.xxxx :-)

I think the real problem with modern scanners is that they don't tune
the front end so it is left wide open. There is plenty of space inside

the UBC9000XLT so you may be able to build some sort of switchable
filter into it.

:Ciao ciao, Giovanni.

Hello, Selling BC 200XLT 200 ch handheld scanner,full cell coverage,exc.
cond.$150.00 shipped.
Please e-mail directly if interested.

400. Thanks for the info....I bought one! (RELM HS-200)

Newsgroup: rec.radio.scanner
Date: 1997-05-05 00:00:00 UTC
From: Dave Schultz <dschultz@pop.dn.netX>
Message-ID: <01bc58e9$93418460$1bd899cf@schultz>
Source record: 198594

Thanks to all who responded to my questions about the Uniden
SportCat. I initially followed the advice of some and bought a PRO-60
one day before the sale ended. After using the PRO-60 for a few days I
decided that this scanner didn't meet my needs. I quickly realized that
I need to lock out channels during a limit search. That plus the way it
munches through NiCads really clinched it. I looked at the PRO-26
but decided it was out of my price range. Radio Shack gave me a refund.

I drove to EEB on Saturday and talked to the folks there. I finally
decided on
a RELM HS-200 for $280. For those interested here are my impressions:

200 channels, 26-54, 118-174, 406-520, 806-824, 848-869, 893-960 MHz
100 freq. search lockout
100/channel/step per sec scan/search
4 AA cells or 12VDC adapters

I am new to scanners, but found this one much easier to use than the
PRO-60.
Battery life with NiCads is more than 6 hours, If any one is interested I
will test.
The display and keypad lights make the unit easy to operate in dim light.
Instead of the up/down keys on the keypad there is a selector knob on top
of the
scanner. The audio output is OK, but one gripe: with headphones there is

alot of hiss when scanning and/or squelched.

Overall I guess it is a good entry to mid level scanner. I probably wont
trade up for
a long time.

Now a question:
What antenna(s) would you recommend for the following applications:
(brands, etc.)
I have a Saturn wagon (plastic roof). would a glass mount antenna
be better than the rubber duckie?

What about a mag mount for moving from car to car?

What home use? I could install a gable mount and mast, but,
would a mag mount work?

I noticed that EEB sells Watson antennas to replace the rubber duckie.
Are the any better than factory?

Thanks for the help.
-
Dave Schultz

> Hi, I am looking for opinions, and information
> about the Ramsey Down Converter kit. Will it
> get full 800Mhz?

Yes.

The average 440 to 512MHz UHF scanner will be able to receive 840 to 912MHz.

I posted this a few months ago:

=== A few notes on the Ramsey SCN-1 800MHz converter =====

The circuit is very basic with "okay" sensitivity, but I wouldn't recommend it for DX'ing the 800MHz band! However, it is fine for local reception. A cellular phone antenna works great. Be warned: The output contains a very large (about -3dBm) 400MHz LO signal that may overload, or cause images in, or even "de-sens" some receivers. (Note: the input and output are not isolated, so the 40-400MHz LO RF energy will make it's way out to the receiving antenna)

Some Tips:

1. Buy some PCB mount BNC connectors. The kit comes with RCA phono connectors!

2. The oscillator that comes with it may cause some problems. The oscillator is a standard 40MHz TTL crystal oscillator module. The square wave output is multiplied 10 times to obtain the 400MHz L.O. The module I received was 1KHz off frequency, which shifted the output signals over 10KHz, enough to cause scanning problems. I replaced it with a *80MHz* module and some socket pins. Now the error is less than 2KHz. The 80MHz module seemed to give better results (a cleaner LO signal) and a more accurate LO signal.

3. The power supply to the multiplier & mixer circuit is not regulated and perfomance/sensitivity varies with supply voltage. You will want to adjust the supply voltage for best reception. This will make the biggest difference in performance. Try adjusting the supply voltage while receiving a signal. Mine seems

to work best on 8.35V.

4. I also placed some 0.1uF ceramic chip bypass caps at some strategic places. Mostly this cleaned up the LO signal. The specific spots were:

a. The supply side of L5 to top ground plane (you will have to scratch away the green solder mask).

b. At the +5V supply pin of the oscillator to bottom ground plane.

c. The supply side of R1 to top ground plane (cleaned up LO).

d. Solder all leads that pass through both ground planes on each side.

5. Clean up the multiplier signal. If you have access to a wide bandwidth scope, connect the "antenna" output to the scope input with a 50 ohm input. The signal level should be around 200mVp-p. *Gently* spread apart, or squeeze, L6,7,8 & 9 and adjust them for the cleanest looking 400MHz signal. They will interact, but just adjust them for the nicest looking 400MHz signal (there will be "lumps" every 5-10 cycles). The actual signal level is not too critical.

6. The board is rather big for the size of the circuit it contains (10.5cm x 12cm). It definitely should be built in a shielded case (it does generate a lot of RFI). I would recommend one of those cast aluminum cases for good RF shielding.

Wadda' ya expect for $50!

Cheers,

>supposedly gives it the 800-900 mhz range, Althoguh I doubt it works, and
>one which increases the speed). Ok 2 questions, does anybody know if the
>800mhz mod for it works?

Didn't work for me, also the posted speedup mod had wrong inforation, you had to LOWER the resistance, not add to it. Lowering the resistance too much blanked the display. When I did get a decent scan speed, I started getting a lot of noise, almost undescribable. The channel would lock in (almost any channel) and a changing frquency squeal would emit. This occured for a minute or so, almost like a capacitor was charging up, and then scanning continued.
This sometimes happened several times, finally I changed the resistor back to original value, and no more problem. By the way, this WAS being used mobile.
(Replaced it with the PRO 2026 on sale for $97 in my area)

One more thing: You're only "invading someone's privacy" if you know who you're listening to. I listen all the time and I don't make any effort to find out who I'm listening to, nor do I care. The only time I have ever known who I was listening to was when one of my friends (who is also is scanner hobbyist) was talking on his cell and I accidentally found him. Other times I am with friends of mine and they invite me to tune in when they make a cellular call, especially when the person on the other end is a mutual friend. By the way, this is usually done with an unmodifiable (10A5 date code) Pro-51 using the 2nd IF. When I had a cellular I hoped people were listening because I purposely said some disgusting shit to freak them out! I described things like farts, belches, etc. in detail, just for the loyal listeners out there! I hope to get another cellular soon after I sell this damn useless Radio Shack HTX-212 2-meter mobile I have. Ham radio can't compare to monitoring a good pursuit!! It's even better when you get to see it!!

The "PRO-2021 to 800Mhz" myth is one of the biggest old wives' tales in the history of the scanning hobby. It can NOT be done!

You can get the radio to DISPLAY 800Mhz frequencies but you can not get the radio to RECEIVE those frequencies because the neccesary front end circuitry simply does not exist.

Woah!!! You'd probably be best off looking for it in your local air traffic controller frequency. Find out what sectional of the country you are in and look up the controller for that section. You're going to need to track the beast as it's going to be like a low earth sat at 80K feet. You may even be able to visually track it?

Oh, you mean the horrible musical group U2? Well, all you'll get out of them is bad political views and noise these days. Sorry.

Since I had a hard time finding any substantiation of this from the FCC's website I wrote to the folks at Premier and asked them to confirm this. Here's their reply, which should quiet the rumors for a few minutes, I hope:

>unavailable for the moment.
>
>I have been unable to substantiate this claim by checking the FCC web site,
>which lists their daily actions. Can you confirm or deny that the AT-600 is
>in fact having legal problems like this? Are the AT-600s still shipping, and
>if so, is FCC type-approval in any sort of question?

There is absolutely no truth to the claim that the FCC has taken any legal action against either PREMIER Communications or ADI. The U.S. version of

the AT-600 is perfectly legal in this country. Neither the receiver type acceptance nor the importing certificate for the radio have been pulled by the FCC. The AT-600 continues to be imported.

This confusion began last month when we began to enounter some CPU trouble with some of the AT-600s we had shipped (one of the batches of CPUs the factory had bought was found to be defective). We asked our dealers to perform a limited recall of the radio so we could check each for one of the defective CPUs.

Our limited recall closely followed the removal of the HTX-204 by Radio Shack, but the two events are, to my knowledge, completely unrelated. One of the AES salesmen has been telling customers that the radios lost their type acceptance, but this is untrue. I was at the AES SuperFest show over the weekend, and I encountered that same salesman then. I spoke to the management of AES (who never told their salespeople that the recall was because of FCC legal problems) and the problem has been corrected. No one there will be spreading that disinformation again.

>Thank you for your time, I'm sorry if you're flooded with this sort of query
>right now. There's a lot to be said for the quick spread of information by
>USENET, but there's also a lot of misinformation out there, too.
>
>Tom Russo KC5ZYC WWW:http://www.swcp.com/~russo/

You are quite correct, Tom. The Internet is a good tool for disseminating information quickly, but is also a great way for rumors, misinformation, and lies to spread rapidly. As always, the information is only as good as its source.

By the way, below is some information on the AT-600 / HTX-204 straight from the PREMIER Communications FAQ that is on our webpage. This is the company's official stand on the situation.

* * *

Q: Didn't you make the HTX-204 for Radio Shack?
A: ADI Communications Corporation manufactured the HTX-204 handheld for Radio Shack. However, PREMIER Communications has nothing to do with this arrangement. Both PREMIER and Radio Shack bought their radios from the same factory, nothing more. PREMIER does not offer any technical support for the HTX-204.

Q: What's the difference between the AT-600 and the HTX-204?
A: The two radios are indeed very similar. However, the AT-600 has a number of features that the Radio Shack does not, including wired cloning, PC programmable, auto power on, programmable VFO range, battery voltage indicator, DTMF decode, and 200 memories in non-alphanumeric mode (as opposed to 120 for the Radio Shack version).

Q: Are accessories for the AT-600 compatible with the HTX-204?
A: Generally, yes. The radios both use the same batteries and chargers, and the same microphone and speaker wiring schemes. Since both radios are

physically similar they also can use the same protective leather cases.

Q: Why did Radio Shack recall the HTX-204 and how does the recall affect the availability of the AT-600?
A: PREMIER Communications has no knowledge of why Radio Shack recalled the HTX-204. Officially, they claimed that they were "concerned that the radio could be used for illegal purposes." What their exact concerns were is anyone's guess.
Some of the initial AT-600s did have some minor CPU problems. It is possible that Radio Shack recalled the HTX-204 because of some related problems, but it seems unlikely. The recall does not affect future shipments of the AT-600. There have been some minor delays on ADI's production line, but production is proceeding at full speed.
It is not known whether Radio Shack will be reintroducing the HTX-204.

Got this nicely made unit out of a junk pile. It revived very promptly after I fixed a power supply problem and replaced the LM386 audio output amp. It even had the 46Mhz cordless phone freqs in the memory.

It clearly works, and probably works properly, but I'm confused by some things. Any hints would be appreciated. I'd also like to know what frequencies it covers, because the user interface doesn't reject out-of-band entries until you are several keystrokes into entering a search range. I can search, and I seem to be able to program channels, but I can't grok the delay and other options.

Seems like a really nice little radio.

Response via mail would be appropriate.

>any scanner, or communications device. {CB, Ham Radio, etc...}

Examine the rear panel antenna jack on an Electra/Bearcat BC210,
BC210XL, BC220, BC300, or BC20/20 models. The labeling might
surprise you. What impedance is printed at the antenna jack label?

50 - 75 ohms

When I looked a few years ago, the RG8 and RG58 sold in my local
Radio Shack had scant braid coverage (i.e., after removing
the black outer jacket, you could see a lot of the dielectric
material through the braid).

Perhaps cable quality has improved since then.

I use RG213/U for cable runs over 20 feet. RG213/U is an "RG8/U-like"
cable with a non contaminating jacket.

Its probably a stinking pager transmitter. Maybe on 152.810. If you
only listen to UHF you might be able to get something to block that one
out. You could maybe try your frequencies that you want on the image
freq (21.? higher) but those rotten pager transmitters come out all over
the place. Also there are other ones (like in the 454-455 range). I
hate those things. I suggest check with Grove Enterprises. Good

>wonders but it has to be better than the telescoping antenna Im using now.

I'd say it will be slightly better than your telescope setup .... :)

I've had this antenna for about 3 years and it works great for the price.
Others have complained about the quality and bla bla bla; but you get what you
pay for. A suggestion of buying a top-end discone isn't a very good suggestion
in that it costs a pile more.

A few of the radial arms loosened up on me once, but this was easily remedied
with a drop of 'loc-tite' on the threads.

The addition of a cheap whip on the top for low-band does make quite a big
difference.

I am using a pretty long run of RG8 (50') and am still very impressed with the
antenna.

Was it worth $60 to me? Yes.

I also have an IC-R1 for sale, for $210.00. Mine, however, covers
from .1 to 1300 completely, with no breaks. Internal Lithium battery
replaced Mar this year. All owners manuals, reference card,
adapter/charger, battery pack (6 AA NiCAD), antenna AND factory
service manual included.

Well, replacing two fixed resistors with potentiometers did not make
any difference, I still see mostly garbige... Maybe it is because the
signal is not clean and has to much interference. If anyone knows
what's going on or have experienced the same problem, I would be very
interested to hear it.

It's a good insulator if you load the threads with it. I used a drop on flat part of the thread stem as it would press against the inner base of the receiving threads. With this, some would squish out around the first 2-3 thread screws which is pleanty to keep it in place and still allow sufficient metal-to-metal contact.

There is absolutely nothing wrong with doing this. Works fine.

Well jim,

If you ever sell a pro-43 for under 200 bucks, let me know cause I will

buy every one you can get. (if in good condition)

BTW......if you read real slow.....you will see he is trying to sell a

Pro-34

NOT a Pro-43. In my opinion, I would not give more than $100 for a

Pro-34!

hate to tell ya, but the Pro-34 is the little brother to the Pro-37. The
Pro-37 uses the same main cpu chip that the 2006 uses and has all the possibilities
as the 2006. The only problem is it uses only half of the main cpu. But

the Pro-34 is a great find ,But I agree that it's not worth 200.00. I would only spend about 130.00 as well

>be available in May.
yes we bought seven via mail order have three on hand and making the mods.
the other four have been back ordered .
the mods are fairly easly need spectrum anly to aligh afterwards.
the freq read outs were changed (done away with) an outboard IF was aded the
scan rate was changed
the pll were canned
new audio section was fitted in the aux case.
further mods will be necessary to make them usable....

In article <19970506121501.IAA27319@ladder01.news.aol.com>,
tandkmoran@aol.com says...
>
>On what specific frequencies in the 30-32 Mhz range are you hearing
this?
>What radio and antenna are you using? Where are you located? It could
be
>many things. Lowband skip is up as I write this on the morning of the
6th
>of May near Chicago, Illinois.

I appologize for the mixup of freq of which I thought cell was on.
the 30-32mhz was ham radio that I was hearing.
The area that I was hearing cell on was between 37mhz and 42mhz.
The ones that I have written in which I witnessed cell was on
37.890
39.850
40.200
40.900
41.250
42.300
42.590
I am picking this up on my Pro-26
My unit has triple conversion so I thought It was impossible for me to
pick up ghost freqs.
I am in the British Columbia, (Canada) area if that helps.

Thanks...and sorry for the screw up.

In responsing to my earlier post (appears at bottom of this message),
ad607@FreeNet.Carleton.CA (Darrell A. Larose) wrote:

>Good work, it's nice to see a public safety agency treat radio monitors
>as normal people, and not the crazed easedroppers that the media seems
>to portray us as.

Darrell, the Los Angeles City Fire Department is proud to have the
support of the community it serves. Among the most stalwart of these
supporters are the monitoring enthusiasts in Southern California.

>Just a suggestion, any chance you'll put the LAFD onto RealAudio so
>we can hear your fireground radio comms???

We have been approached by more than one commercial enterprise who has
offered to provide such a "service". They were however seeking an
official endorsement. We don't do endorsements. Never have. Not likely we
ever will.

It is also my --personal-- concern that these folks will likely (before
too terribly long) start charging for their audio rebroadcasts. I can't
blame them, they've made a HUGE investment. I for one however, will not
be a part of any plan for our Department's information being brokered for
profit by any third party.

While the Department has not stated an official position (and can
obviously not prevent rebroadcast), providers have been generally
dissuaded from rebroadcasting our radio traffic AT THIS TIME. There are a
whole host of reasons and issues that I don't care to elaborate upon at
the moment.

Our preference of eventually offering our own audio is made difficult in
that the City server on which the LAFD webpage resides cannot support
streaming audio at this time.

Again, thanks to you and others for being so supportive of America's Fire
Service!

Stay Safe!!

People use old TV tuners (the 83 channel type) found in older TV's and tune their scanner to the output frequency of the tuner, thus enabling them to recieve whatever up to channel 83 (somewhere around 900 MHz?).

However, the tuning is unstable i.e. the frequency slides all over (or so I've heard).

73,
Mike

Ever try connecting a stable oscillator and your antenna to a mixer,
then tunning the scanner to the sum or difference? I've seen this work.

Hey Ken, On the back of most Radio Shack base scanners there is a small
black cover the size of a match book. Open it up and replace the 9 volt
battery ASAP. That battery holds your memory channels if for some reason
you unplug it from it's power source. You have a very rare and fine
radio there.Visit this site if you get a
chance.

Hi Bob,
I have found a better cable that is real reasonable. Its sold as a 9913
equal but much cheaper. I measured .9db/100 @ 150MHz and 1.9db/100 @
450
and its only $.35/ft or $.33/ft in 500ft quan. Its sold by R & L
electronics out of Ohio.
Later, Dan

Base unit, traveling a lot (camper) Channel # ?, Price doesn't really
matter...Well, less than $1,000. Cellular conversion a must.
Please e-mail direct unless of general interest.

Mark,
Have a look at my web page below. Click on Radio Monitoring
and find the link to Getting Started. Before we go further,
we'll need to know what price range you are looking in.
Today's units go from about $100 to $2000 for something
new depending on what frequency ranges and features you want
and whether you'd prefer a base or handheld unit.
Almost all scanners will pick up cordless but few will
pick up cellular except via a byproduct of the receive
process which allows you to hear "images" of the true
frequency. And yes, listening to either is a federal offense
punishable by $10,000 or so and/or 5 years or so in prison
and who knows what else they care to throw at you. Of course
if you're stupid enough to get caught, it's simply Natural
Selection at work! ;-)
If, after more investigation, you have more questions, and
I'm sure you will, feel free to e-mail this newsgroup or me
directly! Good luck!

Strong signals,

Ideally about 5 foot for the 46 meg. range. 4 foot will work about as well.
the horz. disk part or elements will cover the 144 meg. range.

Message-ID: <19970506021400.WAA27649@ladder01.news.aol.com>
Source record: 198560

The Staten Island Ferry uses the VHF marine radio for it's communications. Channel 19 156.950 Mhz is the "house" frequency. Bases are St. George in S.I.
& Whitehall in Manhatten. The boats are usually called up on channel 13 156.650 Mhz or 16 156.800 Mhz and asked to "go to house". Ferries are called by name ie. Barbari, Lehman, Kennedy, Legion, etc.. I also have a frequency in my files of 158.730 Mhz for terminal operations but have never tried to monitor it. Happy listening!

Tom

I have not used the hidden antenna however I have used a piece of coax split in two. Use the middle conductor and the outside conductor in a vertical position. Also one of the telescopic antennas from RadioShack works good, keep in fully extended. Just my experience.

The gov't hates anything that allows citizens to find out how corrupt they are.. Even if it was a $10.00 AM Radio if they were talking there it would be illegal for you to listen when they know they could get screwed by someone listening.. Just ask any congressman who has used an Analog Cellphone bet they don't use it anymore :)

Too bad that Politicians all lie... Sounds like a nice job lie and raise money with those same lies.. Damn I love that idea SCREW THE CITIZENS GIVE LIARS THE POWER

NOTE: If you don't like my statement tough I don't really care cause its my opinion

REMEMBER:: Big Brother will be watching you soon might be already

Forgive me if there's already been a thread on this. But I keep hearing on shortwave radio something about "you can become a micro-rebroadcaster." It's presented to the listener as legal, and apparently has a range of 5 miles.

Is there a FAQ you can refer me to? I'd especially be interested in frequencies/modes (ie. narrow FM?) that are allocated to this activity, so I can pick them up with my scanner.

Thanks in advance,
Joe

Could someone explain what "The vertical element" in the discone means?
I thought ALL the elements are vertical. Correct me if I'm wrong!
Maybe he's talking about a ground plain?

NO NO NO NO NO NO NO NO NO NO NO NO!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Loc-tite happens to be a very good insulator. I used to work at an
electronics manufac where the QC dept. had no idea what they were doing. They
decided to use loc-tite on some of the screws that were used for RF grounding
purposes. Sigh..... The plant is all but a skeleton now.

>
>Was it worth $60 to me? Yes.

I've also got the Rat Shack discone and find that it's a pretty good antenna.
I haven't had it in the elements for any length of time, but it's done a fair
job of reception. Before I made a 1/4 wave coathanger antenna for my 2 meter

HT, I used the discone to transmit on for a couple of months. It worked quite well for that purpose. I had it on a 20 foot pole in the back yard. Of course, THERE IS NO GAIN IN ANY DIRECTION. I still have yet to add the top element on it, so I can't help you out with that.

I am disappointed with the cheapness of the lower elements. Mine twist very easily. I've been thinking of getting some stainless steel rods from somewhere (not sure where) and putting some threads on them and replacing the cheapo/easily breakable rods that are on there. I suppose that will wait until I break one of them.

hope that helps..

You wrote...

The cleveland went to a digital motorola system that is unscanable. I am pissed about it along with lots of people I know. To find out more find a October 95 issue of popular communications and it will tell you all the info you need. Now I scan the burbs ! and I will tell you it is not like Cleveland..

If you should go to a city council hearing where public questions are allowed you might voice your concerns about such things as...

1. Losing the "check" side of the checks and balances involved in the public being able hear how and if the police are spending their tax money. If they pooh-pooh this idea, ask if a secure unmonitorable radio system wasn't one of the main selling points used by the supplier.

2. Cutting citizens watch dog groups out of the loop

3. Private security firms no longer being able to coordinate their activities with their local district.

4. How does the new system provide for aid with other jurisdictions and communities that are not on the new system.

5. Have them ask the officers if they are still able to recognize individuals voices over the system. I watched their sales video and everybody sound like everybody else, sometimes you could tell male or female, but that was about it.

You should also point out that this was a permanent move, as its illegal under federal law to manufacture radios able to "decode" digital signals, or for the citizen to attempt to do so. Welcome to Motorola Astro. Happy Scanning

Different sats use different frequencies. Everything from HF (Shortwave) up into and beyond Microwave. Did you a specific sat or service in mind? A few birds can be heard on handhelds with decent duck antennas or back of the set whip antennas, but most will require an outside antenna of some sort, if not a "pointable" directional antenna. Try some of the navsats up and down 10 Khz from 150.000 Mhz. If you have sideband reception use that. Tune around slowly for open carriers and weak beeping signals. Listen for a few minutes. If the freq keeps slowly drifting up or down if have heard your first bird! The Grove web page has an excellent breakdown of US Government / Military birds on UHF (225-400 Mhz). Some of the Amateur Radio sats can also be fairly easily heard. Try 137-138 Mhz in NFM mode, you will be listening for weak FAX signals. Those are weather sats. Good luck.

On what specific frequencies in the 30-32 Mhz range are you hearing this? What radio and antenna are you using? Where are you located? It could be many things. Lowband skip is up as I write this on the morning of the 6th of May near Chicago, Illinois.

>if this seems like a simple question.

Since 145 is pretty close to being a nice multiple of 46, a single
element should do nicely to enhance both, although the 145 probably
isn't a problem to start with.

For a 1/4 wave verticle, the formula is Length (ft) = 234 / Freq
(MHz). So L=234/46.

>One last thing, should I actually ground the antenna even though all

532. Battery and PRO-2006?

Newsgroup: rec.radio.scanner
Date: 1997-05-07 00:00:00 UTC
From: NODOTHERE.sternk@alumni.cs.Colorado.EDU
Message-ID: <5kokba$9tm$1@csnews.cs.colorado.edu>
Source record: 198398

My PRO-2006 just started beeping at me and flashing the "BATT" light. I find this interesting seeing as how this unit does not have a battery and is plugged into the outlet (same one I'm using to feed my computer so I know it is working).
I'm guessing there is an internal battery used to hold the frequencies when the power is cut and it is dying. I cannot find the box my unit came in (wherein I would find the manual which would hopefully explain what is wrong to me). Does anyone know for certain what is wrong with my unit and what I can do about it?
It still scans, it's just annoying to use now with the beep.

533. When did hams get 30-34 MHz?

Newsgroup: rec.radio.scanner
Date: 1997-05-07 00:00:00 UTC
From: schlemba@ix.netcom.com
Message-ID: <5kok8q$4pf@sjx-ixn8.ix.netcom.com>
Source record: 198399

I see alot of explanation for a question on cell-like phone calls heard in the 30+MHz range. Since when did we decide these were ham QSOs? An image of a 10 meter phone patch? Not likely. IF images of other ham bands....maybe. What about the possibility of federal VHF low band users with autopatch? How many of us have heard phone patches on the UHF business band or the Railroad channels? Same principle, equip cheap land mobile radio systems with patch capabilities at the base unit.

Just my $.02

544. Antanna Farm - 800mhz alternative.

Newsgroup: rec.radio.scanner
Date: 1997-05-07 00:00:00 UTC
From: ronkatz@interlog.com
Message-ID: <336f9200.457138@news.interlog.com>
Source record: 198410

I recently installed 4 Cellular glass mount antennas for my scanners/radios and found it worked better then the what I used to use before on my last vehicle. I had magnetic mounts and permanent holes drilled through the roof for the Larsen NMO type mounts. With 3DB antennas (same as the two way radio one we all see) All were correctly installed.

The 4 cellular phone antennas are just for my 800mhz radio/scanners and out perform the original setup. Best part about it is that I was able to replace the 3db curly type whips with 1/4waves (short stubby ones). This type of antenna is less visible and invites less curious types who may want my radios more then I do.

Wow what a difference from the Larsen commercial 800 radio antennas. Further investigation I determined that the Cellular phone glass mount antennas or at least the ones I bought used a Beldon double shielded cable. Not only does it appear to have a better outer braided shield. It also contains below it, an aluminum foil giving it virtually a 100% shield. This helps for cable leakage but what about line loss? Well its got to be better, Signal strength remains the same if not better then the older mounts and 3 db antennas. Most of all my vehicle does not look like an antenna farm any more.

If your looking for a good 800mhz antenna and want to maintain a low profile, try cellular. As for transmitting through it, I think it is limited to a few watts.

Now I need to find a way of hiding my VHF antenna.

545. Space Shuttle

Pierre, I think you need to visit the FCC web site and read more information on the new DTV standard and the change over that will be happening over the next decade.

According to some articles I read, The FCC has still not decided whether to re-allot the TV band to use channels 02 through 46 or channels 07 to 51. The FCC's plan is to take away channels 60 to 69 from TV as soon as possible and later, take away the rest the of it when the change over is completed around 2006. Of course, after they do that, they plan to auction most of it off. I for one would like to see both TV channels Five and Six turned over for FM broadcasting. Maybe use Four or Five Megahurtz for Micro stations and the rest for new commercial and non-commercial stations.

Of course, there is lots of talk about TV going digital, but what about FM radio. The Low VHF TV channels could be used for new digital FM radio since the existing plan to bring digital radio has been partly scuttled. The planned use of 50 MHz of band width in the 2 GHz band got screwed up when about half of that was allotted to something else.

Your statement on number Two is correct, existing TV broadcasters would not give up their VHF Channels voluntarily but the FCC can say otherwise.

Number one is also true but if manufacturers are required to put this new expanded FM band on their new radios, it wont be long before many can listen. It may take another 10 years but its better then nothing. And if commercial stations were authorized to broadcast on this new band, the new radio sets will come out that much faster.

Lets make microbroadcasting legal!

Hello Baba,

Do you have the same symptoms on several different paging channels?

Try *reducing* the level of RF into your receiver by collapsing the antenna and/or introducing some attenuation, or even moving the receiver around.

Pager signals tend to be strong, especially on 929-932 megacycles.

Generally, digital decoding works best when you have the minimum signal into the receiver necessary to make things work. More than that and some distortion may be introduced somewhere.

And remember you must catch the complete "preamble" at the beginning of the "batch" so the software can sync up.

You must know for sure you are receiving POCSAG at a speed your setup can handle, not FLEX or some of the older GOLAY or NEC formats. Most paging anymore is POCSAG, especially on 900. Try tuning several other paging channels.

Sometimes you are in an overlap coverage area, receiving signals from two transmitters on the same frequency at the same time. This may be difficult to hear. You can solve this problem too by reducing your antenna to where it only hears one transmitter. If the signals are approximately equal in strength you will not experience the capture effect, rather you may have heterodynes confusing your setup.

Paging systems put out a whopper of a signal into a tiny receiver with essentially no antenna, with that receiver sometimes buried deep inside buildings or basements, and up against our fat bellies which are effective RF soaks. That whopper signal into a sensitive receiver with an external antenna well can overload the receiver.

Assuming everything else in your system is OK, some of the above may help.

Regards ..... Steve

If the HT1000 is not HOT (stolen) you can take it to any Motorola service
center for programming. They don't charge that much. They also have all the
accesories you could ever need. Also you could try any Two-Way shop that
does Motorola gear.

Thanks for the info. Is it hollow and semi-rigid like 9913?

I used 9913-like cable to feed one antenna but prefer not to
use it again.

9913 cable and clones do afford lower attenuation but are difficult
to bend, require special connectors, and can accumulate
moisture inside because they are hollow.

LMR400 looks promising, though.

>There is absolutely nothing wrong with doing this. Works fine.

All I can think of is those stupid schmucks in QC at C-COR (whoops, I said the name of the company....don't ever buy any C-COR cable TV amps!) loading up every screw that is loose with loc-tite. I suppose if you used only a little to hold the threads and allowed most of the threads to get a metal-metal connection you'd be alright.

Sigh....C-COR..... those were the good old days..... They drilled anti-static into us so much it was rediculous. One of the guys I knew got a fuse from the stock room for his power supply that he had inadvertently shorted. The chick in the stock room had a fit when he walked away with the fuse in hand WITHOUT A STATIC SAFE CARRY BAG!!!!!!!!!!!!!!!!!!! OOHHH NOOOOOOOOOOO !!!!!!!!!!!!!!!!!!!!!!!

I used to like finding an amp come down the line with parts in the wrong place. It's not the assembler's fault though. Even though the boards were silk screened with the parts labeled and numbered and everything. I particularly liked one unit I had with TWO leads going through ONE through hole. The person that put the first part in may have just missed the part placement. BUT THE SECOND FOOL THAT HAD TO PUSH THE LEAD OF HIS THROUGH HOLE COMPONENT THROUGH A HOLE THAT ALREADY HAD A LEAD IN IT SHOULD HAVE BEEN HUNG UP BY HIS NADS!!!!!!!!!!!!! Sigh...I'm done yelling now.

Special connectors? Just any connector designed for RG8 will fit 9913.
They are both the same Diameter. 9913 isnt all that rigid, try hardline
if you want rigid. Any place you can use RG8 you can use Beldin 9913...

Could someone with a suitable reference look up the frequencies
for the Washington State Patrol (Western Washington / Seattle,
if that matters)? I would appreciate the help. The freq's I
have are not correct, and I don't know where to look to find them
(reliably!).

Thanks

Dave gekko95@ix.netcom.com

I work at a radio shack. The radio was recalled because of a "regulartory problem". It had nothing to do with power. In the manual it told how to enter a code to expand the receiver.

I found out from a customer that got one from me that there is a code to open up the transmitter to transmit on almost any thing.

He can transmit on the aircraft band, uhf pub serv and more more more.

>... Just any connector designed for RG8 will fit 9913.
>They are both the same Diameter....

Jim,

Belden 9913 employs a 10 ga. solid copper center conductor which
is slightly larger than the stranded center conductor used in RG8/U.

I had to file down the 9913 center conductor to fit inside the
center pin of the more common RG8-style N connector.

Amphenol makes two styles of male N connector:

#82-61 = Type N male for RG8
#82-202-1006 = Type N male for 9913

They are sold through Digikey, Amateur Electronic Supply, and other
retailers.

Sounds nice and innocent, but she failed to mention what the entire
content of her first note to me was...how about her comment: "Are RS
employees taught to rip off their customers, or is it something
in their water?" That appears, to me anyway, to be an antognistic
remark. She sent a second e-mail to me that rambled about
her physical disabilities, people without souls, Northern Telecom,
and a few other unrelated subjects. What was more unusual than that
was the fact that she complimented me on my writing skills in the same
note in which she bombasted me. I truly don't know what her intent
was, but at least she didn't use any curse words.

Andy

OK, I just saw the May Electronics Now article. It's a writeup of the PD203 Pocsag Decoder shareware program and the 741 interface that goes with it. It's good that this is being exposed to more people, but it's nothing that people on this newsgroup haven't seen before.

I really need a program like Scan Cat Gold etc. to drive an AR300A.

If you have a program that you can spare a copy of, please mail it off to me at david084@flash.net

I really want to get back to using my 3000A, but I will need a new program to do this.

Thanks for your help!

David M.

Here is an excerpt from a reply I received to a query as to a scanner which will track EDACS/Ericsson Ge systems:

Uniden at this time does not have any plans that we in custoemr Assistance are aware of to design a scanner that will track the Erickson System. We do know that there are going to be several more units, in the furture. But we believe that they will only track Motorola. Thank you though for your interest.

595. R-10 vs Scout

Newsgroup: rec.radio.scanner
Date: 1997-05-07 00:00:00 UTC
From: David Howard <dhoward@airmail.net>
Message-ID: <2E867E7A86380EBF.E571C41CAFA88CEA.0E5A7C1B63576B10@library-proxy.airnews.net>
Source record: 198461

Well, the title kind of explains it. I do have a known, working Opto Scout as well as my new Icom R-10.

I cannot get the R-10 to reaction tune from the Scout. The Scout receives the proper freq and indicates so on the LCD display. The R-10 just sits there not showing the proper freq. In fact, it never changes freqs.

I know that the R-10 uses a 3.5mm stereo plug in the CI-V port. R-10 parameters settings are as follows as per the technican at Opto:

CI-V address = 01 to 7F (doesn't matter to the R-10 rcving data from the Scout)
CI-V Baud = 9600
CI-V Transceive = ON

I know the Scout uses a 2.5mm mono plug for its CI-V port. Scout is set for CI-V on power up.

Icom Customer Service, told me I only needed Ring and Sleeve from the R-10 to the Scout, which I have wired to the 2.5mm mono plug. No reaction tuning to the R-10. (By the way, I tried Tip and Sleeve--same results).

So what am I doing wrong guys? Need these two jewels to shake hands and work.
Please offer me some suggestions.

Thanks very much.

shumes0843@aol.com (SHumes0843) writes:
>He can transmit on the aircraft band, uhf pub serv and more more more.

More accurately, he can "jam" the aircraft band. But since the transmitter
is FM modulated and all the receivers are AM, there may not be much
communication taking place in that direction. Also, unless the HT
has an AM detector and knows enough to use it in the aircraft band,
reception won't be very wonderful either.

Hello fellow netizens,

I've been playing with my BC-3000XLT, looking for any mods possible (extended frequency coverage, etc.). Though no one really talks about it, this scanner indeed has an EEPROM. It's size is 2K bytes and it's used primarily to store channel frequencies and other programmable data. Since the BC-3000XLT has 400 channels, that leaves 5 bytes per channel, which sounds reasonable. The question is what are the other uses of this EEPROM, and can reprogramming it extend the frequency coverage. here is one response I got:

>i think you have to reprogram the eeprom.
>cellular security does it look for their ad in scanner mags

and then:

| The Cellular Security Group is out of business and will no longer perform
| cellular restorations. Reason: lack of legal resources.

I have no access to a service manual or schematic, but I'm sure there's someone with REAL INFO on this subject. Well, is there any kind soul out there willing to share info with me? I'm sure it would be an interesting (and fruitful) endeavor...:-)
If you're too shy to post on this newsgroup, direct email would be fine.
Cheers!

Best regards,
techno

(P.S: please email me directly in addition to posting here, so no responses are missed. Thanks!)

Would you like to learn electronics? You have alway wondered how it's working? You want to be able to repair your own electronic devices? Do you think that it's necessary to go to high school to understand electronics?

If you answered yes to one of those questions, don't search anymore, the Injunior Club is there. Injuniors Club offer the possibility to learn electronics by yourself and for low cost. Based on new technologies, the Injunior Club offers a variety of products that permits you to explore and discover by yourself the wonderfull world of electronics. Soon the Injunior Club will put to the market a serie of CD-ROM that will tech you in simples terms the basics of electronics.

The Injunior Club promotes the contact between its members. Each members will have access to a directory of other active members. The member will be able to discuss the difficulties and trouble he encounters with other members. An online service on the internet is also avaliable. The members will be able to consult one of or technician in case of a trouble with one of our product

IF YOU WANT TO DISCOVER ELECTRONICS, INJUNIOR CLUB IS FOR YOU!!!

INJUNIOR CLUB

Right.

>> and it is dying.

Right again.

> Open it up, you will probably see one to replace. Most likely the size
> of a quarter, and can be bought from Radio shack.

sigh

RJ: I appreciate your eagerness to help. However, in the future, you
will be of more help if you confine your comments to areas in which
you actually have some expertise.

NODOTHERE.sternk:
Set in the rear panel of the unit you will find a black plastic door.
Remove one Philips screw to open it.
Underneath you will find a standard 9V battery.
Replace this.

In the meantime, keep the unit plugged in even when it isn't turned
on. My experience with the 2006 is that it does not use the battery
in that circumstance. Also, leave it plugged in (and turned off)
while replacing the battery.

610. My POCSAG results (was Re: POCSAG Problems?)

Newsgroup: rec.radio.scanner
Date: 1997-05-07 00:00:00 UTC
From: jdc@cci.com
Message-ID: <E9tJnz.HFE@sunsrvr6.cci.com>
Source record: 198476

I tried all the free POCSAG pager decoders. The best results were with "poc32." Look for the zip file poc32eng.zip.

Poc32 can decode pager tones from a sound card and/or a Hamcomm op-amp interface. Multiple pager signals can be decoded, but you need more than one radio. It can also generate pager signals when hooked up to a transmitter. All in all a good piece of software.

> handheld that has this feature or is it easier to pack an inexpensive
> portable radio made especially for this purpose?

NWS uses a *single* tone, 1050 Hz, not a dual tone or tone
pair sequence like, for example, "Quick Call", (which, like
"PL", is a trademark.) As far as I know, 1050 is NOT
one of the Quick Call standard tones; the closest I have
found reference to is 1047.1 Hz, known as "NB".

It would be interesting to know if 1050 would trip 1047.1 !!

612. Pro 43 worth it?

Newsgroup: rec.radio.scanner
Date: 1997-05-08 00:00:00 UTC
From: steve-101@worldnet.att.net

I saw the Pro-43 in a pawn shop locally. They had a $199 tag on it, but the guy says he'll sell it to me for $175. I offered $150 and he said ok. Is this a good price for the Pro-43? It looks in new shape and has an antenna, but no power supply adaptor.

> air show.

I took my Opto Scout Model 40 to the New Orleans Air Show last
November. I don't know if this is typical of all airports (this was a
Naval Air Station), but there was something constantly transmitting
that made the Scout useless. I don't remember what the frequency
was.

The Monitoring Times web page has frequency list for the Blue Angels
and Thunder Birds:

http://www.grove.net/hmpgmt.html

You might also want to look up airport information at the following web
site (enter Andrews for the airport name):

Oh gee...oh gosh...

I have had four scanners working in my Jeep for so many
years now . Down to three now. use an 800 antennae for the
800 scanner. but if i could find room for another one, i'd
do it. The floor shift disallows me putting in up to seven
in the jeep....

Oh.

yes....of course.

I did not want to drill holes and make it known to any who go
by that I have "radios" inside.

so i got a great outside antennae to hook up and it works
fine. I get stations away from me up to sixty miles. And
I am in the San Fran Bay area....I can get Sacramento off the
radio if I get up high in the East Bay Hills...used to, they
are no longer on 154.19

but i still can get fire out in the San Juaquin Delta area
and east with it on 154.13 if I am in the Co Co valley.

Three scanners. 800 works nice.

Grove sells the kit...never regretted paying Bob that money
he charged. found out later I could have done it myself.
But when income is dependent upon all four working, you pay
the price to take the journey....

Go to Grove.net www site and see...or pay for it and then
extend it out again...one becomes three. maybe four too...

Bob,
>The cable is almost an air core, it has a small plastic cord that spirals up the center.
There are 2 types, the $.35 stuff with a solid center conductor and the $.45
stuff with braided center conductor. I think this stuff is called 2013
or 2213 but im not sure,
if you talk to Roger and mention my name he will know what you want.
Standard PL259 work with this stuff, I think it is about the same size
as RG8.
Later Dan

No they can not as far as I am aware. Not like the AR8000.

> I
> listen to several AM stations 1 Kc off....

Probably you get more treble, or high frequency that way because
the passband is moved, so that the higher frequencies are closer to the
middle of the IF passband. This would not hold as true for FM, as
the deviation in the direction away from your offset will be distorted.
It depends on your channel width in your scanner. Often you can get
away with 5KHz off, certainly 2.5KHz, you can get signals on 10KHz
boundaries with a 12.5KHz increment, but not further than that.

MS Access doesn't like these files. As the other person said, they are SYBASE format. Nothing I have likes them. They are in ASCII, tho. But broken up into 8 or so differently formatted lists.

I have to make a correction here. I made a typo in my original
posting. It only transmits FM mode, not AM. It will RX in AM mode in
the aircraft band, but not transmit AM. Sorry if I caused any confusion
here.

Can anyone help me with VHF Aero Military frequencies? I have a Bearcat 890XLT scanner that is capable of receiving the 225-400 MHz band, but so far I have not been able to hear anything there (aside from the scanner's own self-generated noise). I live not too far from Selfridge, but nothing heard from there either. Any tips??? Resources on the 'net for frequency lists??

Thanks,
John.

Either should work fine connected to an antenna outside on the roof or higher. You could recieve sigs on the hand held though. I'm talking about amateur radio by the way.

These problems are very reminiscent of problems with the MDT signals intercepted with the same interface. The problem is probably caused by your connections to the audio output.

You should try connecting to the discriminator output instead. Its signal has not been munged by the audio amplifier. Try it, I'm sure it will help.

The HTX-204 by Radio Shack does have AM receive capability and automatically switches to that mode in the aircraft band. It will transmit in that band; however it only transmits in AM mode, so it will do no good for using as a aircraft radio.

It will transmit out of band with the ADI AT-600 mod on VHF and UHF, but will not transmit on 800 or 900 Mhz. Cell receive is blocked, even with the mod.

123.35 Ottawa flying club
122.85 Esso
123.0 Shell
129/85 Esso Aviatat

As far as the performers, the following are supposely the pre-set channels in
the Snowbirds (there actually are more than 3 of them), but they may or may
not use any one of these at a specific show:

Snowbird Frequencies:
Air to Air 141.8500
Channel 1 275.8000
2 295.6000
3 310.8000□
4 227.6000
5 243.4000
6 240.5000
7 378.5000
8 266.3000
9 294.5000
10 322.8000
11 245.7000
12 316.5000
13 344.5000
14 356.6000
15 236.6000

16 283.9000
17 363.8000
18 289.4000
19 245.0000
20 239.8000
21 278.8000
22 227.6500
23 266.3100
24 294.7000
25 321.7000
26 344.4000
27 356.6000
28 236.8000
29 282.8000
30 245.5000
31 239.9000
32 299.9000
Emergency 381.8000
Ground Crew 413.0250

From what I remember of last year most of the performers used one of the tower frequencies.

Good luck
--
Dave Holford.

>RJ

Almost every AR1000 I've seen was off-freq about 5 to-15 Khz. The set
screws on the little IF transformers inside can be adjusted, for the brave
of heart. Different IF's are for different bands, I used to have this info
written down, but no more. It may be out of print (?) but Howard Bornstein
wrote quite a nice book about this radio. I miss mine sometimes, one of
the best airshow sets around.

private
>>to DIVULGE!!!

"Public Safety" is NOT Public Domain, it's well covered under the communications act of 1934. Dont reveal the actual contents of what you hear on Police/Fire bands to third parties. I may be wrong but I think at least some aspects of amateur radio are similarly protected (you cant use what you hear for profit).

Well almost, NWS uses single tone not two tone sequential. Tone is 1050
hz. Program A-B for both 1050 hz. Works great. Enjoy !

Well this is very very interseting Mr Scanner Norm Schrein says production
Hopefull y is to start today in the Phillipines on the trunktracker model 235
XLT...

Now Ken am I reading this right you have had a shipment of the trunktrackers?

Something is very very wrong here how could Communications Electronics Inc
have any shipments of the trunktracker.

Ken was that one for evaluation or a whole shipment for resale?

Also,
you do get them through UNIDEN AMERICA right?

Jeff

NO, that rig has tight front end filters even if you can take the
microprosser out of band you wont hear anything....Thats why its so
intermod proof...

Ah, aircraft radios transmit using AM, that's why it switches to AM on receive in that band. Not a good idea to use it in this service anyway since it's probably not type-accepted for that use, therefore illegal for that use.

From: Spunk <login@themall.net>
Message-ID: <01bc5b9b$97bf81e0$de872299@thegale.ptd.net>
Source record: 198359

Greetings,

I am leading a project aimed at doing FLX decoding in
software. We do not
want to use FlexStack if we can help it. It appears
FlexStack uses 12.5K
of ROM and over 1K of RAM when inplemented with a TI 5591
decoder (full
Alphanumeric decoding of course). Are these figures in
line with others
involved with the same design? Is there a smaller code
solution alternative out there? We do
not have enough program or ram memory space in our
microcontroller so if we are
forced to start over I would prefer not to use the hardware
solution and
choose a micro capable of decoding FLX and running the User
Interface. Any
suggestions on what micros to investigate? Speed? ROM/RAM
size? Added
features like RTC, Event Timers, ect. Any help would be
most appreciated.

TIA

Cross-posted to: rec.radio.swap,rec.radio.scanner,rec.radio.amateur.equipment,ba.market.computers,scruz.market

Hi, Its spring cleaning time and thus time to clean out the shack/computer
room of the stuff that doesn't get used enough (or at all)...

I have the following forsale/trade:

1) Icom R71a receiver with remote and manual - $450 obo
2) 2 unopened Kingston 32M parity simms (not EDO) - $350 obo (for both)
3) Archive 2G SCSI dat drive in external case - $250
4) Quantum 730M FastSCSI hard drive (internal) - $150
5) Fujitsu 512M FastSCSI hard drive (internal) - $100
6) 33.6Kbps modem internal (ISA) - $50
7) External SCSI 3.5" case (must be sold with #4 or #5) - $50
8) Apple Powerbook Duo 210 (upgraded to POWER PC)
800M drive, 16M ram, 19.2K modem, scsidock
16 grey screen, 3 batteries, 2 power adapters - $700
(older type "B" keyboard)

I'm looking in the following in trade:
1) Solid State HF rig (Icom 735 or better) accessories a plus
2) 2M/70cm amplifier
3) 2m/70cm base antenna
4) AOR 8000 or similar scanner

Thanks,
Josh Goldsmith

Is that like getting more "talk power" on your CB?

tyler

PS: if you want more tx/rx range, connect a decent antenna to it.

Hey Barry, if you say there is no mistaking '2 meters' in English, what do I do
about that ham radio band I broadcast on called '2 meters' ?

Try again kangaroo boy.

G'day and all that backwards ass stuff.

I'm reading this in alt.flame.spelling....

In article <33728fd6.471126@news.fastlink.com.au> barryoXX@fastlink.com.au (Barry O'Grady) writes:

|>'Enery th' 8th wrote:
|>
|>:>> well, maybe in Australia, but here in the US it *is* "check".
|>:>
|>:>Spelling it "cheque" is King's English. We Americans are the ones who
|>:>spell it incorrectly. Lot's of other words too. Like neighbor/neighbour,

Does Lot own "of"? STOP USING APOSTROPHES FOR PLURALS when it's
not right. There are very few cases where it's correct. Apostrophes
indicate possession or contraction the vast majority of the time.
(With pronouns, apostrophes are used for contraction only.)

|>It is useful to have differant spellings when two same sounding words

Including your "differant"?

|>have differant meanings. In real english there is no mistaking 2 meters

And you were taught that "English" should not be capitalized, I'm sure.

|>to mean distance since distance is measured in metres. likewise, writing

And sentences.

|>a check in real english will not be confused with a money cheque.
|>
|>Mr Webster must have decided that the only way to get Americans to spell
|>correctly was to allow any spelling.

I share your concern here, but only for true misspellings. I consider
the -er/re, -og/ogue, and -or/our variants to be appropriate in their
respective countries. However, there are many unjustifiable abuses
of the language, both on the Net and in the real world.

its v. it's
whose v. who's (pronouns do not take apostrophes; only contractions)
lose v. loose
apostrophes for plurals (apostrophe's for plural's)-:
speach
sentance
bizzare
there v. their v. they're

your v. you're

ad nauseam.

Doesn't sound like blackmail to me, what was the threat? He just wanted
to know what your friends might think. Probably someone recognized your
adress as a call sign and decided to show you what he knew.

You seem awfully defensive about it, but the truth of the matter is no
one here would know where your posting or what other NG's your reading
if you hadn't told us about it!

> If any of you wish to check my newsgroup postings, please do so.

Uh, I'd read up on this one my friend. If the account is in your name
you ARE responsible, if a family member should decide as a joke to post
some child pornography to a NG. You may find yourself in deep caca. Your
"disclaimer" at the end would not mean a damn thing in court if the
above were to happen.

>introduction to electronics.

Wow, We need a new group alt.hate.the.shack. I have the funny
feeling that most of you just love to complain and probably would not
know what to do if your local Radio Shack wasn't there.

And do you really believe that Radio Shack should have master
technicians in each store where the pay is $5.25 an hour? Come on, I
think you will agree that most Radio Shack employees will do their
best in helping you. They are just trying to make a living like the
rest of us. I think that some of you believe that every Radio Shack
employee just loves to go to the computer and give you blank stares...
Chances are you are asking for something that you would need a four
year college education to even know about. And if it's something as
simple as a cap or a transistor and they still go to the catalog then
they they are probably checking to see if it's one they carry or if
it's one they have to order FOR YOU. Give them a break and let them
do their job.

Long Live The Shack!

Shackman

689. Other Info On Pager Freqs

Newsgroup: rec.radio.scanner
Date: 1997-05-08 00:00:00 UTC
From: Jim Robinton <robinton@avherc.sanders.lockheed.com>
Message-ID: <33720FB3.429E@avherc.sanders.lockheed.com>
Source record: 198380

I recently picked up the video guide from R/S (please spare the R/S comments they sell it ok). This unit appears to get its information from transmitions on pager frequencies (probably otherwise unused transmitter time). I also ran into someone here that has a pager that picks up some of the same sorts of information (news, sports, wx), so this seems to be making sense.

When I called the 800 # to subscribe (right now 75% thru their 30 day trial period) the guy at the other end told me that the services I did not order would expire on May 15. This immediately raised my attention...how did he know when my 30 days would be up ?? If the unit picked up the pager signal it could clock the 30 days, but how did he know ?

He admitted that the unit transmits back to the paging network when it first establishes contact. He said this only happens ONCE. But it occurs to me that they could quite easily decide to collect my viewing habbits etc with this mechanizm. Also why would they put hardware into a box like this to transmit back for this one time thing. Seems like a recurring cost that you would do almost anything to engineer out.

1. Has anyone else looked into this. The unit appears to scan to find its recieving frequency. The setup indicates a freq value which I assume is something that will tell you the freq by a translation table (or value loaded by the SW into a PLL).

Does the unit transmit other than the "Once".

2. People here in the scanner group seem to know the protocol used for paging message (POCSAG). Does that same protocol also give any of this other information (embedded?) or do they us something else.

3. I live in southern NH, does anyone know what freq they are using in this area. I suppose I could find it with a scanner since I can tell when it is recieving data (I think the indicator means it is recieving its data vs just data from the channel). I suppose I could watch to find the same duty cycle.

4. I wondered if they downloaded new versions of software via the same method they download the programming. Although I really like the unit's programming capabilities (one touch etc) there are many things that I can think of to improve its usefullness.

Thank you in advance for those of you who post thoughtful responses...My policy is not to flame...join me in making the news group better.

/Jim /N1CRZ

697. Help with Scout 40 / PRO2006 / OS456 / AOR8000 Interfaces

Newsgroup: rec.radio.scanner
Date: 1997-05-08 00:00:00 UTC
From: a1a00051@bctel.ca.antispam
Message-ID: <5kr84s$e53$1@news.bctel.net>
Source record: 198482
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have a PC, a PRO2006 and an Optoelectronics Scout Model 40.
I am considering getting an OS456.

With the OS456 I want to be able to do the following:

1. Load frequencies collected by the Scout into my PC.
2. Load frequencies from the PC into my PRO2006.
3. Reaction Tune the Pro2006 from the Scout.
(I know this will work)
4. Also perform items 1 and 2 above with the AOR8000
that I'd LIKE to own. :-)

According to...

The Computer-Aided Scanner FAQ
Version 1.1
by Michael Alexander, Copyright 1996

Section D: Interfaces
Product: OptoScan 456 and OptoScan 535

"The OS456 and OS535 include built-in CI-V to RS-232C serial interface converter for application in which a receiver is connected to a computer. Its purpose is to convert the CI-V interface voltage levels to RS-232C levels compatible with most personal computers. This feature eliminates the need for an external interface converter box."

Does this mean that I can daisy-chain a Scout or AOR8000 off the OS456 in order to move frequencies from Scout to PC and also move frequencies from AOR8000 to and from the PC? Has anyone gotten this to work? If so, what software do I need?

If this is not the case, then to accomplish all four goals, do I need to purchase one of the following interfaces in addition to the OS456?

Optoelectronics CX12AR
Optoelectronics OPTOLINX

One last question. With the OS456 installed in my PRO2006, is the PRO2006 still able to function as an ordinary PRO2006 when it is disconnected from the PC's Serial Port?

I just recently had a situation much like this.

I went into the corner gas/convienance station, got some gas, oil, etc. Asked the girl behind the counter if she knew what was wrong with my car, (Rough starting when hot) and do you know what?

She did not have a clue!

Now, she was nice enough, even offered me a free car wash with my fillup, but who the heck was she to be working there, when she had no idea what was going on with my car?

Sheesh! Just like Radio Shack!

I am looking for a good mobile scanner that will fit into a standard
radio opening in a car. Does anyone know of any available? I want to
be able to listen to all the various utilities frequencies as well as
CB channels 9 and 19.

Bryan Mohr (bryan@herp.com)

Bearcat has (or did a couple of years ago) a flat rate repair on their scanners. About $30 - $40 as I recall. And they fix whatever is wrong and re-align everything too. Service was quick and easy when I last tried it. I recommend that route...

Whether or not this person does what is suggested, has nothing to do
with his Ham radio hobby or scanner hobby for that fact. Because what
one does in their personal life is no ones business. From listening to
Hams on my scanner & SW radio I am sure there are those who live on the
wild side, but when it they operate on the radios, they are the most
repectable people. I do not think Hams will care what one does in their
personal life, as long as they carry themselves in the correct manner
here or on Amateur radio.

Why don`t you just SHUT THE HELL UP ! I never read anything quite as STUPID ! Just because somebody says something about what you are doing, YOU blow a gasket, and decide that it is blackmail. You know, blackmail has some very set legal definitions, and you don`t say that you were coerced for money, or asked to do anything you didn`t want to do, in return for them "keeping quiet" about these facts. If you don`t believe me, then talk to a LAWYER about it, and he will tell you the SAME GODDAMN THING ! IT IS NOT BLACKMAIL. Personally, I don`t give a damn if you post to alt.QUEERS. But I DO resent having to listen to your endless, mindless BLATHER about a "blackmail" that ISN`T.
You know, this guy knows you well enough to know that it is very easy to jangle your chain and get you to make a fool out of yourself all over the internet (which you have done an admirable job of). YOU are the one that is going on and on about posting to these groups, NOT him! He must be having a really good laugh watching you tell it to the world ! It is more than comical ! Why don`t you post this about 100 MORE times. There are few folks in lower Slobbovia that haven`t seen it yet ! You have to make sure everybody KNOWS, right ? As they used to say on the Bugs Bunny cartoons - "WHAT AN ULTRAMAROON" !!!

->
->Steve
->----------------------------
->steve-101@worldnet.att.net
->----------------------------

Steve,
If the radio is in perfect operating condition(test it before you pay for it), then $150.00 is an excellent price for this very fine scanner. You will not be disappointed in it as long as it works properly.
Phil

709. Frequencies on CD?

I have some Popular Communications magazines I would like to sell.
These are from Nov. 1982 thru August 1992. About 65 issues in all.
Missing some. If you are interested, please email me and I will send you
a complete list. Am asking $50 for the whole lot.

Scott

720. One Antenna -> 2 Scanners

Newsgroup: rec.radio.scanner
Date: 1997-05-09 00:00:00 UTC
From: tcoles@tor.hookup.net
Message-ID: <5ktsdr$f6t$1@loki.tor.hookup.net>
Source record: 198245

Well not two scanners, but one scanner and one Scout. I would like to know if I can easily hook-up one antenna (mobile, on the car) to both the Scout and AR8000. I use Reaction Tuning, so the ability for both devices to have an external antenna is important while in a car. Any ideas? I'm sure that this has come up before.

Thanks.

Todd

> changed? Thanks, Tony

Your referring to a "Automode" bandplan perhaps ?

The R10 as sold in the UK does not have an automode bandplan downloaded and it will not default to any particular mode or step size when entering a frequency. When no automode bands are selected the "auto" option is not available when selecting modes.

You can however upload via PC a bandplan to it with specific modes and step sizes associated with particular frequencies - there are 15 available "bands" however this is insufficient really to allow all modes and step sizes to be allocated accross the complete coverage (the AR8000 uses something like 127 different changes as supplied from the factory although can be altered). It does however allow modes and step sizes to be allocated to the frequencies you perhaps listen to most and these can be ammended at any time via PC.

All the best

I tried to keep my Radio ShackPro 2040 scanner in my office near my computer. When I turn the computer on I get alot of interference. I am using the antenna that came with the scanner. Would an external antenna allieviate the problem. I am considering a scanner antenna from Radio Shack mounted to my chimney. I really only use it to listen to the local PD and Fire calls. What kind of grond do I need to supply for lightning protection. Any suggestions/ better ideas appreciated.
Thanks
Tim

>If you could point me in the right direction I'd appreciate it...

I address causes and solutions to a related problem in the current issue (May 1997) of Monitoring Times magazine.

Also, from the FAQ "REPAIR TIPS: BEARCAT SCANNER RADIOS:"

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[...]

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

Some facts on *digital* 900 Mhz phones:

- Conversations are much more secure than non-digital cordless phones
- Range is usually better than 49 Mhz phones (at least 2x better)
- Almost all suffer from 'sidetone' (your voice echos when you speak)
How bad it is depends on the phone. Most people can get used to
it in a few days.
- Static is non-existent for the entire usable range of the phone.
As you approach the limits of range you begin to experience
digital drop-outs (missing parts of the sound) but no static.
- Spread spectrum phones generally have the best range.

Dave,
I too need more info on this unit but I have some basic
features listed in my Scanner Model FAQ. Have a look at
http://www.qsl.net/n2mca/MODEL.HTM/
Good luck!

748. pro-2005 mods

Newsgroup: rec.radio.scanner
Date: 1997-05-09 00:00:00 UTC
From: Me <ajmcph@ecr.mu.oz.au>
Message-ID: <01bc5c9e$ff4918e0$0f02000a@barbara-mcphee>
Source record: 198273

Hello again,

I've just bought a pro-2005 scanner. I know that I need to make it scan in 30 khz intevals to get all cellular phone frequencies. The guy who I bought the scanner off has assigned frequencies around the 800 mhz range in 30 hz increments as the 400 channels. So I guess this works although there are no channels left. This seems to me to be a somewhat ridiculous method.

Could someone who has done the pro-2005 mods write me and tell me if it worked and how they did it.

Another question I have is, if a diode is clipped to allow 30 hz increments, will 30hz be displayed as a 'step' option on the display.

Thanking you in advance,

Adrian.

I have a Nintendo64 system, with an extra controller (2 totatl), and the Mario64, WaveRace64, and PilotWings64 games, also a strategy guide for Mario64. System is absolutely mint...with all original boxes and instructions. Am interested in trading for a Yupiteru MVT-7100, 7200, 9000, or an AOR 8000 scanner. Or am interest in trading for 2M ham equipment..particularly a 2M mobile.

Source record: 198277

As a previous poster mentioned, the 9-volt battery is normally in the compartment on the back of the Pro-2006. If an Opto board has been added to the scanner, the battery was moved to the inside / rear of the scanner. You'll need to remove a cover.

It is useful to have differant spellings when two same sounding words
have differant meanings. In real english there is no mistaking 2 meters
to mean distance since distance is measured in metres. likewise, writing
a check in real english will not be confused with a money cheque.

Mr Webster must have decided that the only way to get Americans to spell
correctly was to allow any spelling.

I am looking for State Police/Patrol frequencies to listen to along
the following route:

US-151 Dubuque, IA to Cedar Rapids
I-380 Cedar Rapids to Iowa City
I-80 Iowa City to Des Moines
I-35 Des Moines to IA/MO state line
I-35 Missouri line to Kansas City, MO
I-35 Kansas City to Wichita
I-35 Wichita to KS/OK state line
I-35 Oklahoma line to Okla. City
I-40 Okla. City to OK/TX state line
I-40 Texas, including Amarillo
I-40 NM/TX state line to Santa Rosa, NM
US-54 Santa Rosa, NM to Las Cruces, NM
I-25 Las Cruces to Albuquerque
I-25 Albuquerque to Santa Fe
NM-68 Santa Fe to Taos
US-64 Taos to Raton, NM
I-25 Raton to Pueblo, CO
I-25 Pueblo to Colorado Springs
US-24 Colo. Springs to Vail
I-70 Vail to US-40
US-40 from I-70 to Rocky Mtn. Nat'l Park
US-34 from Estes Park to I-76
I-76 Ft. Morgan to CO/NE state line
I-80 from CO/NE line to Omaha, NE
I-80 from Council Bluffs, IA to Des Moines, IA

Basically, my wife and I like to listen to something while driving and
sometimes it helps spot speedtraps too..

I'll be glad to forward any info I receive to anyone who is
interested...

Thanks for any help you can provide!

Jason and Stacey

767. Opto Scout and OS456 Question

I REALLY need your advice before I rush off and
buy the wrong thing.

Can you use the CIV port on the OS456 to move
frequencies collected by an Opto Scout Model 40
into the PC that is connected to the OS456?

Has anyone done this?

..Gary

I have literaly thousands of mods for Ham Radios and Scanners.
In the next week or so I should have all my mods on line for download.
I'll give the web address to those of you that want to begin, however in
the mean time I will attempt to send them manually to you via email.

Communications Electronics Inc.

1-313-663-8888

You need to call from your fax machine handset or call from a phone on the
same line as your FAX/MODEM and set the software to maual receive and then
click the button to receive while hanging up your phone when the tape
tells you.

Andy

Message-ID: <3360E624.53B4@concentric.net>

Hi everyone. I have a Pro-62 scanner and would like to know if
purchasing an external antenna would help with reception and if so any
recommendations of type/model of antenna and where it can be purchased.
Thanks for your help.
--
J. W. Beamon

My only recommendation is that anything mounted outside your house will
greatly improve your reception......anything metallic......a true scanner
antenna would be great too.

Well Steve, I can't really answer your question, but have experienced similar......I have an old..1980's vintage, analog cell phone, it is not active, yet I can pull up either of the two local carriers, and make credit card calls if I wish. Anyways, on the way to a rather urgent call, in a highly populated area, i picked the phone up to use it, only to become involved in someone else conversation. It didn't last long, and I also would be curious as to why this might have occured...

Source record: 198333

Hello all,

I have a Uniden Sportcat which I use for monitoring RR freqs, 160MHz.
Can anybody recommend a good mobile antenna and/or guidelines to
choosing one. Doesn't the freq requirement(s) influence the length of
the antenna? Thanks in advance.

this is just a remark I was only relaying what the FCC told me to us to
beable to view the dBases. i think as they are the ones who released them
that they should know what will and will not work

I did try DBase and lotus found lotus to work better

Hello All,
I am looking for anyone with a manual for the Uniden Bearcat BC-1200XLT.
It's a 100 channel/11 Band Scanner. If you have manual, or any info about
this fine toy please e-mail me at wildbill@carolinacommerce.com as I
rarely have access to newsgroups.
Thanks!

this is just a remark I was only relaying what the FCC told me to us to
beable to view the dBases. i think as they are the ones who released them
that they should know what will and will not work

I did try DBase and lotus found lotus to work better

781. UBC-3000xlt Hidden functions

Newsgroup: rec.radio.scanner
Date: 1997-05-10 00:00:00 UTC
From: easycom@infomaniak.ch
Message-ID: <3374C8DE.26BE@infomaniak.ch>
Source record: 198088

They are hiden keys about the Uniden UBC-3000xlt.

- push "scan" when you turn the power "ON" :

ON direction of Scanning
OFF direction of Scanning

- push "MANUAL" when you turn the power "ON" :

The scanner turn immediately "ON" without welcomme text.

-push "DLY" when you turn the power "ON" :

Change to 2sec the delay
Change to 4sec the delay

- push "E" when you turn the power "ON" :

"ON" key beep
"OFF" key beep

- push "LIGHT" when you turn the power "ON" :

Light "ON" (without 15sec delay to turn "off")
Light "OFF" (delay 15sec before the light turn "off" auto.)

- push "AUTO" when you turn the power "ON"

Sort ON ?
Sort OFF ?

- push "." + " 1 " when you turn the power "ON"

Test -1 + turn off the power when you see this message.

+ push "LMT" + "HLD" and turn the power "ON"

You are in the "test-1" menu.

you can change the number with "LMT" for down, and "HLD" for UP.

" " " " "LO" to "HI" to "n" with " SRC " .

It's the destination code for coverage ???? I don't no.

you can leave this menu with "SCAN".

- push "." + "2" when you turn the power "ON"

Test-2 + turn "OFF" the power when you see this message.

+ push "LMT" + "HLD" and turn the power "ON"

You are in the "Test-2" menu.

in the dispay you see: "rd" (read) "00 00" for example.

you can change "00 00" for "01 FF" (example) with "LMT" or "HLD"

This is EXA-code for memory-adress. (00 to FF).

If you press the "DLY" key, you change the "rd" mode to "Edt" mode
(Edit-mode. !!!!! MODIFICATIONS ARE STORED !!!!!!!)
You change from "Edt" to "rd" with the "TRBO" key.
You can change the "Bank 1" to "Bank 2", "Bank 3"..... With the key
"1" to "8" .

If you change the frequency memory in the normal mode, the EXA-code
change when you see in menu-2 mode.

Fonction for this menu, Control ?????

Leave this menu with "SCAN" key.

- push "." + "3" when you turn the power "ON"

Test-3 + turn "OFF" the power when you see this message.

+ push "LMT" + "HLD" and turn the power "ON"

You are in the "test-3" menu

The "UBC 3000" stay in the display. All keys are looked.

This menu is for change the text or cancel ??? I don't no.

Leave this menu by turn the power "OFF".

- push "." + "4" when you turn the power "ON"

Test-4 + turn "OFF" the power when you see this message.

+ push "LMT" + "HLD" and turn the power "ON"

you can change the mode with key "1", "2", "3".

you can change "LO" to "HI" with " SRC " .

This is unknow menu. Coverage ????????

- push "." + "5" when you turn the power "ON"

save "OFF" (battery save off ???)
save "ON" (battery save on ???)

- push "." + "6" when you turn the power "ON"

select "OFF" (you can't change the AM-NFN-WFM in normal use)
select "ON" (you can change the AM-NFM-WFM in normal use)

push "E" + "1" when you turn the power "ON" = fonction of "test-3."
push "E" + "4" when you turn the power "ON" = fonction of "select".

Does anybody know of a modification that can be made to the Icom IC-47A 440-450MHz Ham Transceiver that will make it also receive in the 460 - 470 MHz range (specifically want to monitor 460.xxx frequencies).

Brussel,maandag 5 mei 1997.

Beste vriend William,

ik heb je bericht gelezen op de Internet Newsgroups.

Ik was van plan een Kenwood Transceiver te kopen en ik ben

ge�nteresseerd door je radioapparaat.

Kan je me enkele aanvullende inlichtingen doorsturen, A.U.B. ?

Hier zijn mijn persoonlijke gegevens:

Francesco(EMAIL:fperta@ulb.ac.be)

Hoogachtend.

Check out Grove's web page. (http://www.grove.net) I bought a new
PRO-43 from them less than a year ago. They are not refurbished they
are brand new in the box. They are from the last production run so they
will not accept the cell mod but I did not let that stop me. I wanted a
scanner that covered the 220 band and the PRO-43 fit the bill. I love
mine and would not part with it. I don't know how they come to have a
stock of new PRO-43s and I didn't ask.

785. Long lasting scanner

Newsgroup: rec.radio.scanner
Date: 1997-05-10 00:00:00 UTC
From: Jay Cai <caix0014@gold.tc.umn.edu>
Message-ID: <Pine.SOL.3.91.970510150022.12855A-100000@gold.tc.umn.edu>
Source record: 198138

I just bought a new RELM HS200, and it works great. I'm interested in some of the long-term aspects of this scanner. According to the instruction manual, it uses non-volatile memory to store the channels. If this is the same type of non-volatile memory used in modems, and if my memory is correct, don't these have a limited life-span of about 10,000 storage cycles? (I think I read this in my Supra modem's manual, e.g. using AT&W stores info into the non-volatile memory). Has anyone actually experienced a non-violatile memory breakdown?

Another thing is, with all electronic equipment, lots of on/off cycles may put increased stress on the chips inside. I was wondering if it helps to disconnect the AC/DC adapter instead of turning off the scanner with the on/off knob, since the knobs may be the first to break down.

Usually what is the first thing that breaks in an old scanner? Any other comments or suggestions?

Jay

These questions may or may not apply in theory. But in reality your
scanner will last virtually forever. Only real problems come from
mechenical systems. Volume, squelch, keypad ETC. In theory LCD, LED
Transistors everything has a limited life, but you will expire first :)

I keep my PRO-2006 right next to my computer. I'm using an external
antenna.
I did put some RF chokes (came with a computer monitor) on my interface
cable from my computer to the Opto 456 board in the scanner. It seemed to
help some. Overall I don't get much interference except on weak signals.

Anyone know of any suppliers of a rubber duckie 800MHz dedicated, professionally made antenna for a hand held scanner? Something similar to a Motorola MTS2000 antenna (800 MHz version), only with a BNC rather than whatever Mot uses on that radio (though I'd like to know if you can tell me). I'd prefer to have the BNC built in rather than to have to use an adapter, and I'd really rather not see any of the metal at the connector, but perhaps I'm getting too picky (what's new?). If anyone has any suggestions or knows of a dealer, let me know.

The frequencies are: 259.700Mhz
270.000Mhz
296.800Mhz
all are AM voice, hope this helps

John,

I'm holding the printed version of the faxed back copy on my desk right
here at this moment. They may have stopped doing it, I dunno. I am not
advertising for their company. I just thought that others might want to
check it out, since we all have to wait for the release. It got me pretty
psyched about receiving the new model just reading through it. I dunno
try it again, maybe they were having technical problems or something.

Andy

I don't know about from Germany to USA, but anywhere to Canada you just declare it as Amateur Radio equipment and pay not duty. This is true for anything that could presumably be used as amateur equipment. ie: I brought in a discone from the US and declared it as such. No problem.

Cheers!

use a cellular antenna with a tnc-bnc adapter
it works great on 800mhz

Visit www.scanware.com for a DOS program that will read these files.
They also have the same (I think) files broken down by state at that
site.

Hello,
See my posting of "Space Related Frequencies" posted on April
27th for many more frequencies. You can most likely find it by
searching on "www.dejanews.com" using the topic or my e-mail address.
If you need help or need it e-mailed to you let me know. Please try
to find it via Dejanews first as if anything this gives you more
experience using the internet.

Best Reguards,
Jerry

Centurion makes duckies cut for just about any band you want. They used
to sell directly but I don't think that is still so ... perhaps a dealer
can order one.

Just counted forty-one posts on this nonsense, since 8 May! Many were multiple daily posts from self described victim.Is this the kind of word salad chat this NG is for, or is it for the exchange of communications product and services information? If it has become a forum for the rantings of an apparently unstable person, SEE YA. I for one am not going to wade through almost half a page of crap.

821. Bearcat bct-12

Newsgroup: rec.radio.scanner
Date: 1997-05-10 00:00:00 UTC
From: vr23@cornell.edu
Message-ID: <3373bcb8.97526780@news.zippo.com>
Source record: 198174

Hi!
I have the following question regarding the Uniden Beartrack Bct-12 scanner(?) Is it worth purchasing? My main goal is to keep myself, while i'm in excess of the speed limit, away from cops - i want to be notified if there are any around. Will this device do the job? How does it work if more than one cop car is present? Is it any good in an urban environment or is it meant to be used on secluded roads? Will I be able to actually hear police conversations? Are cops required to keep it on all the time or do they turn their radios off when lurking for speeders? And lastly, am I better off buying a scanner?

Please excuse the fast-paced posting, I just felt like being concise and not wasting any bandwidth. (Sounds really stupid, considering all hte web traffic going on out there. Maybe they will give out tickets for fast downloads soon as well <g>)

Thanks a bunch,

Vic vr23@cornell.edu

902 to 928 mHz can be newer cordless
phones (not digital or spread spectrum types if you are intercepting
them), wireless cctv transmitters between camera and monitor or VCR
(audio pickup), wireless stereo audio, amplifier to speakers or
headphones, or similiar consumer electronic devices. Good info and links
at

Vic,
The best defense these days is still a radar detector. I
would only use a BCT-7/10/12 and/or scanner in addition to the
detector. You can not depend on radio traffic from cars or
planes nor the highway patrol mobile extender/repeater alerts.
Buy a top-of-the-line detector like a Valentine or Bel
and take your chances accordingly.

Sonny,
While not a dedicated 800MHz antenna, the ducky that comes
on the new Icom IC-R10 performs quite well at 850MHz and up.
In my recent handheld antenna review, it placed 2nd or 3rd
out of 27 others in the bands between 850 and 960.
It is quite "attractive" and the rubber coating does
extend down over the BNC connector.
The Welz WS1000 antenna scored very well in this range too
but I'm not sure how well you could get ahold of this antenna
since the radio isn't marketed here in the US. I think it
would be easier to contact an Icom dealer and get one of
theirs.
Best of luck!

Brian,
You are correct. I have since been corrected in the proper
use of the R10! ;-) I was only partially familiar with the
options available via the CI-V port. I am now aware of the
Cloning software which is used via the earphone jack to
program the bandplan(ala AR8000).
You win some...you loose some...;-)

Maybe they don't work on Tonka-Toys. Makes sense to me.

Really: were they a full-service station?

Was she wearing see-through overalls?

Did she have a name tag on her breasts

You see, my guess is that the female was a worker who
"takes money and says 'thank you' and gives you a long
look" only.

I guess you have a bone to grow and you need support to help
it up....wrong place to go.

anyway...the girl was doing her thing and that was not being a
mechanic. For that they have a union to deal with.

Now, what is the purpose of your post? What can we learn from
how you see RS as similar? I am not sure that message is there,
but in order to know more, we need to know more about why you

assimilate a RS'ian glimpse-back over this matter which is so
heavy on your mind.

good advice: stand up and give your brain a breather.

> Has anyone done this?
>
> ..Gary

Yes. It can be done. I'm using WaveLinks from Percon Corp which
will do the download. I've got one of the first OS456 boards made so I had
to add a jumper on the OS456 board.

I called Opto and they said they made a change on later boards. With a
little direction from Opto I was able to do the mod myself. I can't recall
exactly where the jumper goes, but if you have a later model OS456 or
call Opto for the mod, you can download the data. The jumper simply
passes data from the RS-232 port to the C-IV port.

838. Picking up Frequencies that scanners should NOT PICK UP!?

Newsgroup: rec.radio.scanner
Date: 1997-05-10 00:00:00 UTC
From: dragon@netshop.net
Message-ID: <5l0ksn$g8t$1@noc.van.hookup.net>
Source record: 198202

I have a general question regarding scanners that pick up frequencies that
are outside of their designated allocation numbers.
(example; on my pro-26, It states,
Range freq.steps(khz)

59.7500-71.7500 6000
72.0000-75.9950 5
81.7500-87.7500 6000
etc.

Now, the freq. I am after is 76.5000 of which I can get if I override the
systems defaults and change the 6000khz step to a 5 khz step. Am I getting a
true 76.5 or is this a dead freq for my scanner?(IE.The crystal in my pro-26
unable to get this freq.)

If this is a true (true in the sense that if something was broadcasted on
this freq...I would get it)freq. for my scanner, why is the default a 6000khz
step and not a 5 khz step....why not have all the freq. default at 5khz and
then allow the user to change this to his/her likeness?

any info would be helpfull.
thanks.

Seems like I may have over looked the fact that the 800mhz frequencies I have posted as Fire Department is also used by the Police. I may be mistaken but I think that the licensee of the frequencies is the City of London and Its for the city and Emergency services use. I'm sure someone will correct me if I'm wrong here.

Sorry for the confusion you got me here...anyways this is what I have for london

I recently purchased a Scout frequency counter but did not purchase the optional antennas or filters. Are they worth the $$$s? Which ones are worth getting?

I recently saw either a web site or a posting in this group that had some excellent SO CAl freq's including LA News Copter Freq's.

Can some one either give the web address or repost the freq's.

I am pretty sure it was a site.

Thanks

protector@earthlink.net

847. Bring over scanner from Germany?

Newsgroup: rec.radio.scanner

I have a friend in Germany who is coming to the U.S. soon.
If he buys an AOR AR-8000 scanner in Europe and brings it over
will he have any problems with customs?

Thanks in advance,

Andrew

Eric has been involved in a lot of trouble making on his own. He instigated
the frank burns guy on rec.radio.cb, and has been caught forging news group posting. Due to this, I doubt he really wants to draw any attention like you mention or else the skeletons in his own closet may be found.

Who cares PERIOD???

this is just attention starved Eric trying to get attention again.

Funny, he forges posts all the time & stirs up trouble on the scanner
& CB newsgroups (where the Frank Burns character is from) then he is
surprised that others do it to him.

This is what I got from a two month TDY to Ft. Huachuca last summer. All freqs were confirmed active.

Border Patrol
163.725 Lemmon 1 repeater Statewide
163.775 Information Statewide
165.875 Surveillence
165.850 Repeater
165.975 Repeater
413.700 INS Command
163.700 Mule 2 repeater
169.600 simplex operations
168.975 simplex operations (listed as Anti-smuggling freq)
163.675 simplex operations
163.650 Mule 1 repeater

I think it's hilarious that "FRNKBURNS" can get such a rise out of Eric
and cause him to go ballistic on here, simply by sending him e-mail!
FRNKBURNS does something simple and gets a huge reaction!

Just like the real Frank Burns on the CB.

: >-Steve

: Oh gee...oh gosh...

: I have had four scanners working in my Jeep for so many
: years now . Down to three now. use an 800 antennae for the
: 800 scanner. but if i could find room for another one, i'd
: do it. The floor shift disallows me putting in up to seven
: in the jeep....

: Oh.

: yes....of course.

: I did not want to drill holes and make it known to any who go
: by that I have "radios" inside.

: so i got a great outside antennae to hook up and it works
: fine. I get stations away from me up to sixty miles. And
: I am in the San Fran Bay area....I can get Sacramento off the
: radio if I get up high in the East Bay Hills...used to, they
: are no longer on 154.19

: but i still can get fire out in the San Juaquin Delta area
: and east with it on 154.13 if I am in the Co Co valley.

: Three scanners. 800 works nice.

: Grove sells the kit...never regretted paying Bob that money
: he charged. found out later I could have done it myself.
: But when income is dependent upon all four working, you pay
: the price to take the journey....

: Go to Grove.net www site and see...or pay for it and then
: extend it out again...one becomes three. maybe four too...
:

--
I say screw the am, who needs it? the scanner is more
entertaining. I have mine hooked up to my radio antenna, fm is still
great,and I find myself turning it down to catch scanner action.

The fax back number for the Bearcat 235XLT Trunk Tracker owners manual
is 313-213-1000. The fax number you dialed 313-663-8888 is for
ordering a Bearcat Trunktracker or any other Bearcat scanner.

I will have our staff add a pointer on our main fax number directing
people who dialed incorrectly to call 313-213-1000 for the Trunk Tracker
information.

Steve,
What pawn shop? While you are dilly dallying around, I'll go get that Pro-43.
$150 is a tremendous price for one of the best handheld scanners around. I've
got one, and would love to get another if I could find one at that kind of
price.

871. UBC3000xlt hidden functions

Newsgroup: rec.radio.scanner
Date: 1997-05-11 00:00:00 UTC
From: easycom@infomaniak.ch
Message-ID: <3375770C.2BEE@infomaniak.ch>
Source record: 197985

They are hiden keys about the Uniden UBC-3000xlt.

- push "scan" when you turn the power "ON" :

ON direction of Scanning

OFF direction of Scanning

- push "MANUAL" when you turn the power "ON" :

The scanner turn immediately "ON" without welcomme text.

-push "DLY" when you turn the power "ON" :

Change to 2sec the delay

Change to 4sec the delay

- push "E" when you turn the power "ON" :

"ON" key beep

"OFF" key beep

- push "LIGHT" when you turn the power "ON" :

Light "ON" (without 15sec delay to turn "off")

Light "OFF" (delay 15sec before the light turn "off" auto.)

- push "AUTO" when you turn the power "ON"

Sort ON ?

Sort OFF ?

- push "." + " 1 " when you turn the power "ON"

Test -1 + turn off the power when you see this message.

+ push "LMT" + "HLD" and turn the power "ON"

You are in the "test-1" menu.

you can change the number with "LMT" for down, and "HLD" for UP.

" " " " "LO" to "HI" to "n" with " SRC " .

It's the destination code for coverage ???? I don't no.

you can leave this menu with "SCAN".

- push "." + "2" when you turn the power "ON"

Test-2 + turn "OFF" the power when you see this message.

+ push "LMT" + "HLD" and turn the power "ON"

You are in the "Test-2" menu.

in the dispay you see: "rd" (read) "00 00" for example.

you can change "00 00" for "01 FF" (example) with "LMT" or "HLD"

This is EXA-code for memory-adress. (00 to FF).

If you press the "DLY" key, you change the "rd" mode to "Edt" mode

(Edit-mode. !!!!! MODIFICATIONS ARE STORED !!!!!!!)

You change from "Edt" to "rd" with the "TRBO" key.

You can change the "Bank 1" to "Bank 2", "Bank 3"..... With the key

"1" to "8" .

If you change the frequency memory in the normal mode, the EXA-code

change when you see in menu-2 mode.

Fonction for this menu, Control ?????

Leave this menu with "SCAN" key.

- push "." + "3" when you turn the power "ON"

Test-3 + turn "OFF" the power when you see this message.

+ push "LMT" + "HLD" and turn the power "ON"

You are in the "test-3" menu

The "UBC 3000" stay in the display. All keys are looked.

This menu is for change the text or cancel ??? I don't no.

Leave this menu by turn the power "OFF".

- push "." + "4" when you turn the power "ON"

Test-4 + turn "OFF" the power when you see this message.

+ push "LMT" + "HLD" and turn the power "ON"

you can change the mode with key "1", "2", "3".

you can change "LO" to "HI" with " SRC " .

This is unknow menu. Coverage ????????

- push "." + "5" when you turn the power "ON"

save "OFF" (battery save off ???)

save "ON" (battery save on ???)

- push "." + "6" when you turn the power "ON"

select "OFF" (you can't change the AM-NFN-WFM in normal use)

select "ON" (you can change the AM-NFM-WFM in normal use)

push "E" + "1" when you turn the power "ON" = fonction of "test-3."

push "E" + "4" when you turn the power "ON" = fonction of "select".

Eric,

I have just finished reading through the various accusations you have made against me on various radio-related Usenet newsgroups. This is in regard to your claims that I am somehow associated with other America Online members whom you have stated publicly are engaging in harrassment against you.

Please listen closely; I will only state this once:

I am in no way associated with any other America Online members you have mentioned on these newsgroups, specifically "FRNKBURNS" and "HLKINGSTON." Your assumption and public statements that our America Online screennames are all eminating from the same America Online account is incorrect. My account is in no way connected with theirs, nor am I associated with these or any other individuals whom you feel are harrassing you in any manner.

Furthermore, I have nothing to do with the childish games which are apparently taking place between you and some of the other citizens band radio operators, amateur radio operators, and Internet/America Online users in the Phoenix, Arizona area. My geographical location is nowhere near Phoenix, Arizona and I have no interest in what is apparently an ongoing feud between yourself and these other individuals.

I have never made any sort of inflammatory, insulting, or derogatory statements against you on any forum, public or private. Of the two Usenet newsgroup postings which I originated and which you commented on directly, neither of them was in any way defamatory against you. One was my comment on your ridiculous "BLACKMAIL ATTEMPTED" thread in which I simply stated that I found it humorous that America Online member "FRNKBURNS" could garner such a
heated reaction out of you simply by posting his remarks on a public newsgroup. Your assumption that I must be in some way associated with "FRNKBURNS" simply because I found your reaction to his remarks humorous is absurd and erroneous. The other thread, "SMELLY HAM OPERATORS", was simply my opinions concerning the lack of personal hygiene exhibited by many amateur radio operators, based on my own personal observations. I never mentioned your name, nor does this even apply to you unless you're one of the above-mentioned group of amateur radio operators.

In closing, I would ask that you cease and desist from accusing me of engaging in actions or collaborating with others in actions for which you have no proof to back up your claims. These accusations are false, and it is my opinion that you would have a difficult time backing up your statements in a court of law if charges were to be brought against you for libel and/or defamation of character.

876. Which to buy? Icom R10 or AOR8000

Probably the best source for So Cal freqs.. including news coverage is
a book called Scan Fan. I've loaned mine out right now, and dont' have
the author's number, however I know that it is available at Jun's
Electronics in Culver City and at Henry Radio in West LA.

You can't beat this book for $20.00

Steve

My 7000 does the same thing. At one time I read about a relay that
stays on and when you turn it off and back on it goes back to normal
for a little while then it gets distorted again. When I get some money
up I'm gonna send mine in for repair. Until then it sits on a
shelf...kinda a waste.
If anyone can find a fix PLEASE post it here for all of us.

Ben

Well now, Eric, you certainly have managed to stir the masses in rec.radio.cb and rec.radio.scanner, haven't you? Of course, this was probably your intent in the first place, because it seems as though every time you post one of your whiny little messages in rec.radio.scanner or rec.radio.cb, there is a horde of people who post replies telling you what a pathetic dork you are. According to my dictionary, "blackmail" involves attempting to extort money from an individual under threat of public accusation or exposure of illegal or immoral acts. I have read the E-mail from "FRNKBURNS" which you posted, and nowhere in the E-mail is there any threat to expose illegal or immoral acts unless you send FRNKBURNS X amount of money. In fact, there is no mention of payment or money anywhere in that E-mail message! So what led you to the conclusion that FRNKBURNS was trying to blackmail you? Isn't that called "drawing your own conclusion?"

As for your assertion that you are not responsible for your family members using your ISP account, let me ask you this: as a licensed amateur radio operator, aren't you responsible for any third party traffic which you may handle as a service to your family members? If one of your family members were to violate FCC regulations as a result of a third party traffic transmission, what would you tell the FCC then? That you weren't responsible for violating FCC regulations because it was your family member(s) that used your callsign in conjuction with the exchange of third party traffic? The same logic applies in this situation, I believe. You can come up with a million excuses as to why you are not responsible for what your family members do while they are accessing the Internet using your ISP account, but unless you have a special agreement with your ISP, YOU are the one that is responsible for any information that is transmitted via the Internet using your account, including blackmail allegations.

Come to think of it, Eric, maybe FRNKBURNS could file a lawsuit against you for defamation of character, since you really have no legal grounds for claiming that he tried to blackmail you. Perhaps you'd better think about THAT possibility while you wring out the tears from your crying towel.

898. Antennas

Newsgroup: rec.radio.scanner
Date: 1997-05-11 00:00:00 UTC
From: "David M." <david084@flash.net>
Message-ID: <3375C5AE.E68@flash.net>
Source record: 198060

I have a question for those of your who are familiar with aluminum antennas and how the oxidize in the outdoors:

I have a huge, and formerly fantastic Radio Shack TV antenna, it is the largest that they sell. It has been out in the atmosphere since last october. About two, maybe three months after inital exposure, the antenna began to operate very poorly. I have repeatedly replaced the transformer, and just last night, the entire cable. I have cleaned the couple of connection points where the antenna fits together, however, there are millions of other connection points where each segment of the antenna connects to the main boom. I took down the antenna and washed it with a mild soap recently in hopes that something could be cleaned off of those connnection points, but still, the signal level is half of what it once was.
Im certain that the problem is oxidation of aluminum at the many other points that are non-removeable. Does anyone know what to use to clean these connection points with? Has anyone had similar experiences with big huge TV antennas? If so, how did you fix the problem of loss of signal after exposure to the environment???

Please reply via email to david084@flash.net

I know there must be a fix for this problem, but so far, I have not discovered it.

Jack,
I own a relatively new Escort Courier 9100 900 mhz phone. After a few weeks, I have experienced a significant amount of static when receiving and placing a call -- so much so that I do not use the phone. Thinking it might be a weak battery (4.8 vdc, 600 mAh) I have removed it and have had no luck trying to find a replacement. Radio Shack will special order one, but I'm not sure if that is the problem. Any suggestions would be appreciated.

Ron

Just image reception there fellows. 902-920 MHz is one of the amateur
radio bands. Also shared with a lot of Part 15 junk, of which cel phones
do not qualify. Triple conversion receivers often do image reception very
well. I am surprised that the gov hasn't decided to outlaw triple
conversion in receivers for that reason. Oh well, I guess that I
shouldn't give them any ideas, EH?

New to this forum and have been spending the last couple of days checking out the postings.

Would like information from anyone on the Uniden BC235XLT Trunk Tracker...

Is it out on the market yet, how well is it working, etc.?

Thanks in advance for the input.

Bbbzzzz! Sorry, WRONG answer. Vanna has your door prize on the way OUT THE DOOR!

(BIG grin)

You got the two items mixed up. The other gentleman was asking about the HTX-242 MOBILE 2m radio, while you were thinking of the HTX-204 HANDHELD 2m / 70cm radio. :-)

As I understand it, the BIG reason why the 204 was so rapidly removed from the market was that it was easy to modify it (how, I have NO idea) to scan up and listen to the infamous "cell phone" frequencies. Which, as we all know, is a big, Federally-mandated "no-no". (sigh)

Anyway, if there IS a mod for the 242 MOBILE radio, I also would like the information, I would love to be able to talk back to my work on the radio, instead of just LISTENING to them. (Flames cheerfully ignored on this subject.)

Your mileage may vary. :-)

YEs, of course. My same-o, same-o move. One in where the
four channel am/fm stereo cassette player was....and in went
the BC 600... you cannot put a newer version of the bc's in
such as 760 xlt due to the protrusion from the adaptor for
BNC to rca plug:

bought a small am/fm radio and when it gets to a point that
I am delivering dubs, no need to listen to the scanners all
over...just a few freq's in the city in at that time.

Lucky people with Column Shifters....more room for radios.

:Does anyone know where I can pick up wireless mic. freqs?
:
:Thanks.
:
:Norm

I don't know anywhere that lists them, but I have gathered a few over the years.

Wireless mics are permitted to operate anywhere in the 88 to 108 Mhz FM broadcast band provided they are not on the frequency of a local broadcast station.

Some other wireless mic frequencys I have found are;

36.700, 37.600, 202.100, 202.200, 202.300, 202.400, 202.900 Mhz.

The 202 Mhz frequencies seem quite popular with the better commercial wireless mics.

What is it with these guys? They'll spend $2K on a new HF rig with a gold-plated code key plus another $4K on a tribander and tower, but they're too damn cheap to spend a couple bucks on deodorant and new underwear. Every hamfest I've ever been to has been dominated by these fat, balding, middle-aged men with beer bellies that hang at least a foot over their (usually free hanging) belts. Half of them have BO so bad you'd swear they haven't showered in a year and the other half smell like they just dumped a load in their pants!

It's called "personal hygiene." Learn and practice it.

Hiya kids! Yet another amateur on the block. I accidentally picked up my own cordless phone frequency when I was talking to a friend, and thought, gee! that's kinda cool. The only proble was that the signal was scrambled. Bummer. The question is, is there anything out that to descramble it? I have yet to find any PC software that will do it, or any hardware... does anyone out in TVland know of anything that I could use?

Any help is appreciated, and an E-mail or a posted response would be just ducky.

Thanks in advance.

From: Graham Barber <gbarber@griffin.co.uk>
Message-ID: <33759C51.6FE0@griffin.co.uk>
Source record: 198114

I have the above scanner installed with loft aerial and reception is superb.

I consider myself reasonably intelligent but just cannot understand the programming of frequencies to memory banks, no mater how many times I read the book.

If I have say 3 local frequencies that I want to scan, and all are closely spaced do I place each of the 3 frequencies into memory? I simply want to scan the 3 freq's only without all the others in between.

Is there also a site for scanners where lists of frequencies are available?

Would be most grateful for anyones assistance.

Thank you

Graham Barber

955. Time has come tp buy a base unit.

Newsgroup: rec.radio.scanner
Date: 1997-05-11 00:00:00 UTC
From: T-Man@Bigfoot.Com
Message-ID: <3375c668.618871@news.storm.ca>
Source record: 198121

I have decided that it is now time to buy a base scanner for the home. The handheld is just seeing to much abuse being moved from house to car and back. I have not looked into buying a base scanners in while, actually since the days I purchased my handheld 4 years ago. I am willing to pay for a decent model. I know the Pro 2006 looked like a great model and almost bought it. My question is what are scanners, scanner makers make models similar to the 2006? Of course I would like to have a access to a wide range of frequencies and cell mod is "not" a priority.

Thanks.
T-Man@Bigfoot.Com

956. IC-7000 Rough sound ?

Newsgroup: rec.radio.scanner
Date: 1997-05-11 00:00:00 UTC
From: pake@lin.foa.se
Message-ID: <pake-1105971434250001@pake.lin.foa.se>
Source record: 198122

My ICOM IC-R7000 has a very rough sound.
Coming slowly after a few minutes of start up. Not every time.
Nearly unreadable after a while.

If I turn it off and then on its ok a few minutes , and then
rough again.

Where exact is the solution to the problem ?

/Per-Ake

It could be 900Mhz cordless telephones, or images from the cellular
ban located at 869-894Mhz. I usually find these images between 895.010 and 916.500Mhz.

>
>
>Some facts on *digital* 900 Mhz phones:
>
>- Conversations are much more secure than non-digital cordless phones
>- Range is usually better than 49 Mhz phones (at least 2x better)
>- Almost all suffer from 'sidetone' (your voice echos when you speak)
> How bad it is depends on the phone. Most people can get used to
> it in a few days.

Have an Escort phone and I have NO sidetone on it.

>- Static is non-existent for the entire usable range of the phone.
> As you approach the limits of range you begin to experience
> digital drop-outs (missing parts of the sound) but no static.
>- Spread spectrum phones generally have the best range.

Unless you have lots of equipment and knowhow there is no
way anyone is going to listen in on a digital spread spectrum phone
like the Escort. (Of course the gov. has both but Joe Blow with
his scanner doesn't.)

Jack

961. McDonalds.

I am searching for the McDonald's output frequencies. One is
155.70. My shut-in friend wants to listen to the people
in the drive-thru across the street.

A direct response to snuffy@execpc.com would be appreciated.

The most common frequency pairs to check are:

30.8400 --- 154.5700
31.0000 --- 170.3050
33.1600 --- 154.5100
33.4000 --- 154.5400
35.0200 --- 154.6000 *
154.5700 --- 170.2450 *
154.6000 --- 171.1050 *
457.5375 --- 468.3875
457.5500 --- 467.7750
457.6000 --- 467.8250
461.0375 --- 466.0375
460.8875 --- 465.8875
461.0875 --- 466.0875
469.0125 --- 464.0125 *

If they're using "3M" or "GM" headsets then you need to search
from 920-922 Mhz Wide FM for the speaker frequency and from
903-905 Mhz Wide FM for the headset frequency.

An ariticle on Fast Food monitoring appeared in the August 96
issue of Monitoring Times. It can be view online at the
following URL http://www.grove.net/fastfreq.txt

This list covers most Fast Food chains across the entire US.

Hi,

The NJSP has been using the State's 800 Mhz Motorola trunked system
for several years. They use subfleets A1-6 in southern NJ, B1-6 in
northern NJ, and C1-6 in central NJ.

The new Trunk Tracker scanners by Uniden would be able to follow the
New Jersey State police effectively. I have sucessfully tested a
pre-production model on the Troop A systems several times.

Refer to the New Jersey State Police section in my South Jersey
Scanner Page at http://www.erols.com/jcardani/np00.htm

You will find frequencies, codes, and trunked talkgroup information
in both Motorola and Uniden Trunk Tracker format.

hope this helps,

Joe

966. Alternative Frequency Counter!

Newsgroup: rec.radio.scanner
Date: 1997-05-11 00:00:00 UTC
From: dmitton@mulberry.com
Message-ID: <5l4oee$22c$1@gollum.kingston.net>
Source record: 198132

This is not a commercial announcement, just an informative observation of something I purchased yesterday.

I was at a Ham Flea Market and found a new hand-held frequency counter being offered for sale! It is significantly cheaper than the Opto model(s) and appears to work quite well. It is manufactured by Mitronics (Korea I think). It appears quite sturdy, its housed in a black aluminum chassis.

The details can be found at http://www.falls.igs.net/~rftech/ or at rftech@falls.igs.net ... once again, I have no affiliation with this company, I'm just a customer.

I purchased the "lowest" model, the MIC-10C28. I've been tinkering with it since yesterday and it seems to do just what I want ... I have no previous experience with this type of instrument so I have nothing to base its functionality on.

All I've used it on so far is my kids walkie-talkies, my cordless phone and my cellular ... OK in all cases ... I had a moment of confusion with the cordless ... the counter got a little confused if the hanset and base are close to each other and to it ... now that I think about it that sorta makes sense.

The talkies are JUNK ... the frequency drifts all over the place ... no wonder the kids have trouble using them ... and my AR2700 scanner has trouble staying locked on ... makes sense too.

The cell phone is bang on ... it will grab its frequency from several feet away ... about 20 feet line of sight here in the house.

For Canadians they have/had a deal on yesterday where they paid the taxes ... thats 15% where i live so it was an even better deal. If anyone is interested I'll post any additional operational "stuff" I notice about it.

Why didn't you post the real CHP web site address? Why should we have
to go through a link on your site? (One written with a hardwired IP
address, ferchrissake?)

Here are the *REAL* URLs:

http://www.chp.ca.gov/ CHP home page

http://cad.chp.ca.gov/ computer aided dispatch media info center
(covers all state areas that are on-line)

http://cad.chp.ca.gov/lacc.htm info from the LA area dispatch center
- this is what David's site links to,
but there's a LOT MORE here (such as
other areas within the state)

I would like to inform all Scanner Listening, Shortwave, Ham, Amature radio users and listeners, of a mailing list that caters to these topics!

If you are interested in joining the list, simply follow these instructions ...

Send am email message to majordomo@honk.org and in the body of your message type in the follwoing.

subscribe ott-scan your@email.address

You will be sent back a message with an authorization code. You will be required to send the auth code back, in order to be added to the list. (This is to filter out unwarranted subscriptions).

You will be validated right away, and added to the mailing list.

My ott-scan mailing list listings are closed off to the public for your piece of mind. This way people cannot see who is on the list. This way, your email address will not be given out.

If you have any questions, please feel free to contact me.

Have Fun, and Happing Listening!

James Poulin
Ottawa, Ontario Canada.

I've got a BC3000xlt for sale that's just over a year old. It's only been used three or four times and is in new condition. It works as advertised but I'm getting into another hobby and need the money. So I'm selling the 3000 for a fair price of $255. I'll pay for UPS.

It comes with the original box, manual and various paperwork. I'll throw in my printout of the various tips and tricks for the 3000.

If you're interested, please e-mail me as I don't lurk on this newsgroup as much as before.

I am selling my Bearcat 8500 XLT with CTCSS chip installed as I never listen to it anymore. 500 channels, alpha/numeric display plus the standard BC features. Excellent shape, manual and some scanner books included, looking to get about $275 for it. If interested, make offer.

Thanks and 73, KE4QKN

: and all that)

There is a US version as well as an international one. A US dealer
can probably only sell you a US version.

986. BC3000xlt hidden fonctions

Newsgroup: rec.radio.scanner
Date: 1997-05-12 00:00:00 UTC
From: easycom@infomaniak.ch
Message-ID: <3377495A.6CB6@infomaniak.ch>
Source record: 197949

They are hiden keys about the Uniden UBC-3000xlt.

- push "scan" when you turn the power "ON" :

ON direction of Scanning

OFF direction of Scanning

- push "MANUAL" when you turn the power "ON" :

The scanner turn immediately "ON" without welcomme text.

-push "DLY" when you turn the power "ON" :

Change to 2sec the delay

Change to 4sec the delay

- push "E" when you turn the power "ON" :

"ON" key beep

"OFF" key beep

- push "LIGHT" when you turn the power "ON" :

Light "ON" (without 15sec delay to turn "off")

Light "OFF" (delay 15sec before the light turn "off" auto.)

- push "AUTO" when you turn the power "ON"

Sort ON ?

Sort OFF ?

- push "." + " 1 " when you turn the power "ON"

Test -1 + turn off the power when you see this message.

+ push "LMT" + "HLD" and turn the power "ON"

You are in the "test-1" menu.

you can change the number with "LMT" for down, and "HLD" for UP.

" " " " "LO" to "HI" to "n" with " SRC " .

It's the destination code for coverage ???? I don't no.

you can leave this menu with "SCAN".

- push "." + "2" when you turn the power "ON"

Test-2 + turn "OFF" the power when you see this message.

+ push "LMT" + "HLD" and turn the power "ON"

You are in the "Test-2" menu.

in the dispay you see: "rd" (read) "00 00" for example.

you can change "00 00" for "01 FF" (example) with "LMT" or "HLD"

This is EXA-code for memory-adress. (00 to FF).

If you press the "DLY" key, you change the "rd" mode to "Edt" mode

(Edit-mode. !!!!! MODIFICATIONS ARE STORED !!!!!!!)

You change from "Edt" to "rd" with the "TRBO" key.

You can change the "Bank 1" to "Bank 2", "Bank 3"..... With the key

"1" to "8" .

If you change the frequency memory in the normal mode, the EXA-code

change when you see in menu-2 mode.

Fonction for this menu, Control ?????

Leave this menu with "SCAN" key.

- push "." + "3" when you turn the power "ON"

Test-3 + turn "OFF" the power when you see this message.

+ push "LMT" + "HLD" and turn the power "ON"

You are in the "test-3" menu

The "UBC 3000" stay in the display. All keys are looked.

This menu is for change the text or cancel ??? I don't no.

Leave this menu by turn the power "OFF".

- push "." + "4" when you turn the power "ON"

Test-4 + turn "OFF" the power when you see this message.

+ push "LMT" + "HLD" and turn the power "ON"

you can change the mode with key "1", "2", "3".

you can change "LO" to "HI" with " SRC " .

This is unknow menu. Coverage ????????

- push "." + "5" when you turn the power "ON"

save "OFF" (battery save off ???)

save "ON" (battery save on ???)

- push "." + "6" when you turn the power "ON"

select "OFF" (you can't change the AM-NFN-WFM in normal use)

select "ON" (you can change the AM-NFM-WFM in normal use)

push "E" + "1" when you turn the power "ON" = fonction of "test-3."

push "E" + "4" when you turn the power "ON" = fonction of "select".

Try the following scanning web sites dedicated to the DFW area. The first one has an extensive list of frequencies available for download. The second I just discovered, and I haven't had a chance to take a good look at it.

http://www.interplaza.com/scandfw/
http://web2.airmail.net/lblant1/pubsafe.html

Irving is converting over to a trunked system, but their current UHF "T-band" system was still in use the last time I monitored. BTW, monitoring DFW airport and the local TRACON traffic is something else, especially since the FAA redesigned the air traffic system for the DFW area.

I've flown with a scanner quite a few times, carried it on board in my carry on luggage, and never had a problem at security. Be sure your battery is charged up so you can turn the radio on for the security people, if they ask. As far as using it on the aircraft during flight - well, there have been a lot of discussions on this and other newsgroups concerning that. Everyone seems to have had different experiences with flight crews when trying to use on board. Don't attempt to use it during take-off or landing - you will, more than likely, be asked to put it away during those times if you do.

If you're here during bad weather, be sure to catch the amateur radio SKYWARN nets:

Dallas County: 146.880
Irving City: 146.720
Tarrant County: 146.940

The only DFW airport frequencies I can remember off the top of my head are:

Tower - East 126.550
Tower-West 124.150

I don't have any other frequencies with me at the moment (I'm at the office), sorry. Try the listing from the first web site.

Enjoy your stay in the area!

Eric,

Those freqs are used when the astronauts are in space suits outside
the shuttle. They are also backup freqs for the TDRS satellites.

My records show 279.000 rather than 270.000 MHz as indicated above.

Happy scanning,

Jon

That does not necessarily help with regard to performance of an 800 MHz duckie. A duckie antenna is the worst choice for VHF lo ... nothing is going to perform well there.

Q: How many news group subscribers does it take
to change a light bulb?

A: 1,331:
1 to change the light bulb and to post to the news
group that the light bulb has been changed
14 to share similar experiences of changing light
bulbs and how the light bulb could have been
changed differently.
7 to caution about the dangers of changing light
bulbs.
27 to point out spelling/grammar errors in posts about
changing light bulbs.
53 to flame the spell checkers
156 to write to the list administrator complaining about
the light bulb discussion and its inappropriateness
to this news group.
41 to correct spelling in the spelling/grammar flames.
109 to post that this news group not about light bulbs and
to please take this email exchange to alt.lite.bulb
203 to demand that cross posting to alt.grammar,
alt.spelling and alt.punctuation about changing
light bulbs be stopped.
111 to defend the posting to this group that we
are all use light bulbs and therefore the posts
are relevant to this mail list.
306 to debate which method of changing light
bulbs is superior, where to buy the best light
bulbs,what brand of light bulbs work best for this
technique, and what brands are faulty.
27 to post URLs where one can see examples of
different light bulbs
14 to post that the URLs were posted incorrectly, and
to post corrected URLs.
3 to post about links they found from the URLs that
are relevant to this grouph makes light bulbs
relevant to this group

33 to concatenate all posts to date, then quote
them including all headers and footers, and then
add "Me Too."
12 to post to the list that they are unsubscribing
because they cannot handle the light bulb
controversey.
19 to quote the "Me Too's" to say, "Me Three."
4 to suggest that posters request the light bulb FAQ.
1 to propose new alt.change.lite.bulb newsgroup.
47 to say this is just what alt.physic.cold_fusion
was meant for, leave it there.
143 votes for alt.change.lite.bulb.

Hello!

In little under a week, I will be visiting the following suburban areas of
Chicago. Was wondering if anyone out there could provide me with some of
the basic frequencies such as police and fire for the following:

Hoffman Estates

Schaumburg
Downers Grove
Lombard
Naperville
Oak Brook

Du Page County Sheriff
Cook County Sheriff

Any information would be greatly appreciated. Thank you in advance.

Paul

> Makes you wonder if the American individuality can also be a bit of a
> wrench in the works?

NTSC color was designed in the late 40's/early 50's to be compatible with the existing b/w TV sets. PAL and SECAM were designed decades later. So we had the benefits of color TV long before the rest of the world. A technically inferior system is the price we paid for early availability -- decide for yourself if it was worth it. Quite a few other countries also use NTSC, notably Japan, Canada, Mexico and much of Asia and South America.

As for the English vs. metric systems, we're not the only holdouts -- the English system is also used by Upper Volta, so it can't be all bad!

Have I beaten this horse dead enough?

What the hell is wrong with you people
I work at the Shack, and granted, it's not the greatest job
pay wise, but I enjoy tech stuff and it's a good place to
play with new stuff. And as far as knowing anything, alot of
my employees are not as knowledgeable as a tech, but that's not
what they are. They are sales people. Dumbass.
Tandy Corporation has very good technicians, not at the stores,
but in the repair centers. And have you ever worked at Radio Shack?
Then Shut up if not. You don't even begin to understand how much crap
we have to go through to make you bunch of nerdy losers happy.
I would much rather be out hacking fones or doing THIS than worrying
about YOUR stupid "parts problems". So get a life and a little
understanding, and move out of your parents basement.

Ever thought of NiMH (Nickel-Metal-Hydride) batteries, or even LiIon
(Lithium Ion).
For NiMH battery voltage and chargers are (almost) equal to NiCad. Energy
is
a little higher. LiIon has more energy/weight and energy/volume, but you
will need another charger etc. Cell voltage about 4 volts (and also a
charge/discharge protection)

Arjan Strijker

BE VERY CAREFUL. I was experimenting with different tones on my "wideband" VHF HT and I set off the old Civil Defense siren down the street (now used for severe weather). It took over 30 minutes for the city (?) to turn it off. My scanner indicated the police dispatcher was flooded with 911 calls. (OOOOps)

You forgot the blackened teeth and bad breath mixed with last weeks garlic - especially when they try to talk confidentialy and get inside your cone of "personal space"!

Oh - I forgot to add the odd fart from eating too many onions with the hot-dog this morning!

Notice too the extra long little finger nail on the right hand. A special tool used for unpacking 4 of the 5 primary appertures of the face, cleaning yesterdays meal from between the decaying teeth.

>Anybody got a ScottPAK I can borrow? The Atlanta Geekfest is coming up!!!

Joking apart, (Who was joking?), We caught on guy at Longleat Amateur Rally in England a few years back, how had just stolen a handportable 2metre rig. He *was* a smelly little thing in more ways than one.

We gave him the choice of either accepting our "Instant" punishment or await us calling the police and reporting him for theft. (He was caught red handed with the goodies hidden in his bag!) He opted to accept our "Instant Justice"

We emptied his pockets and discovered that he had a large amount of cash on him. We marched him down to the Disabled Amateur Radio Amateurs Charity's stand, where we suggested that he made a very large but totally *voluntary* donation.

When the charity workers saw him feeding all of his ten pound notes into the box, they wanted to know his name and address so that they could acknowledge his very generous gift. We suggested that he wanted to keep his generosity annomous. He was then escorted to his car and then escorted off the Rally grounds.

His callsign was circulated to all exhibitiors. (If he is reading this, A G6... from Oxford - yes your callsignb is still on the black list!)

That was 10 years ago and he gave over 100 pounds (about 160 USdollars) - every penny he had on him - the word got around fast and that year saw one of the lowest thefts form the stands.

1008. RS Extension Speaker

>See if you can spot it (like I have).
>Please note that the path is exactly the same (in all cases). This
>indicates a single user aliasing as 3 people.

You really need to learn more about how the system works, Eric. I almost feel sorry for you, displaying your ignorance in a public newsgroup like this.

I'll tell you one more time: ALL posts eminating from AOL have the SAME path because they originate from the same master server. Duh!

>So, without further comment from IKNOWRADIO, HLKINGSTON or >FRNKBURNS...
>Any action you take against me will result in all of this information
>being used in an appropriate manner.

And what is that, Eric? Please, do tell. We're all waiting with baited breath to hear what some little "student" in Arizona is going to do to us.

>Also note, these accounts are finctitious (mail bounces back). This
>further indicates that the user is trying to remain annonymous.

Chalk up another false statement from Eric Oyen. You have NEVER had mail bounced back from me because you have NEVER sent me mail.

>A copy of these headers is being forwarded to security@aol.com for
>investigation.

Don't expect a response. These folks have better things to do than bother with little unimportant crybabies like you. But if they were to take the time to respons, they would tell you the same thing that I'm telling you: the accounts are in NO way connected. Your other buddies out there in Phoenix may or not be associated with one another; I'll let them argue it out with you. But I have no affiliation with either one, nor with anybody else.

I really feel sorry for you, Eric. Poor little meathead.

1012. Re: Open Letter to Eric Oyen (N7ZZT)

Apparently getting that "backed in a corner feeling", our old pal Eric Oyen said:

>I meant it when I said I had NOTHING to lose.
>Why don't you talk tp a P.I. and do a background check?

Wouldn't be worth the time or expense. Trust me, you're not that important, Eric.

>You might discover that I don't own ANYTHING, that I am DEAD, That I am
>DISABLED, currently a STUDENT, etc.
>Get it?

Yeah, I get it now. You're a pathetic little unemployed nobody. Possibly crippled. No life. Nothing better to do besides sit on the computer and the radio all day, drawing a government welfare check and causing problems for other people.

>I know the law in these matter VERY well.

If you knew the law, you wouldn't be posting on a public newsgroup, accusing people of "blackmailing" you when you have no evidence to back up your accusations. Ditto for accusing people of harrassing you via e-mail and posting under multiple addresses. Very foolish to make public accusations against others when you cannot back up your statements with proof.

>Threatening me with legal
>action might get you deeper into debt.

I'm not "threatening" you with anything. I'm just trying to help you by warning you of the consequences of your actions if you continue to make false, libelous, and defamatory statements about myself. I tried to tell you nicely, Eric. I explained in a very calm and civil manner that I am in no way affiliated with the other individuals whom you seem to have a problem with. You chose to disregard this information and continued to make false statements. You do so at your own risk.

Most MDT terminals operate on various 800 trunked radio systems. Fulton County Police have some in some cars (DUI Task Force) and APD has some as well. DeKalb County seems to be the biggest user of the terminals. Again, they all operate on the agencies TRS.

I hear that Cobb CO. wants to try some out on their type II system but they haven't installed the hardware in the communications ctr. yet.

Hello!?!?!?

We're talking bowling here... lifting a 15 lb bowling ball twice
every five minutes, interspersed with hoisting a 5 lb pitcher of
beer every three minutes... it might be physical exertion, but I'd
hardly call it exercise.

David,

Find a local automotive cleaning supply's company and get some
Aluminum Brightener and wire wheel cleaner.

Clean and redo all your connections, then seal the whole mast with
a clear coat Crylon finish, Finish the job by sealing your coax connections
with the appropriate sealler putty.

Waylon...

Tonite while searching the bands I found some type of police traffic on 418.675. I am in Middlesex Co. in NJ. can anyone tell me who this was? FBI, DEA? It seemed to be a 3 or 4 car team following a truck. All the while hoping this truck would get on the NJ Turnpike as they had the State Police at 3 different locations ready to stop this truck. They went out of range before I could hear what happened. Now I am simply curious on who they actually were.

Thanks for your help.

1037. Avoiding Cellular on BCT-7?

Newsgroup: rec.radio.scanner
Date: 1997-05-12 00:00:00 UTC
From: rtmills@ix.netcom.com
Message-ID: <33769149.27605461@nntp.ix.netcom.com>
Source record: 198002

Anybody know if there is a good way to avoid picking up cell tower conversations when using a Uniden Beartracker 7?

Perhaps some kind of filter or something?

Anytime I'm near cell towers, I start picking up cell transmissions (I guess due to the BCT-7 being a double conversion scanner) and when I'm driving I'm annoyed by it.

If I use my RS PRO-43, I get by with almost no cell interference in the trunked 800mhz range I am listening to for police - just happens on the BCT-7.

Grove has told me they are not aware of any such filter - thought maybe you guys have found a way around this.

Thanks
-Toby

1038. Re: IC-7000 Rough sound ?

Newsgroup: rec.radio.scanner
Date: 1997-05-12 00:00:00 UTC
From: Rick Pemble <pemble@ix.netcom.com>
Message-ID: <01bc5e7d$a2eb8c00$4dd1bbcd@pemble.ix.netcom.com>
Source record: 198003

Well, I had a problem with my R7000 a few months ago. After a while, the sound
turned garbled. My symptoms were that if I 'popped' the power off-then-on real
quickly (or real slowley, the intersting thing was that if it was done
quickly it would still exhibit the same characteristic), the sound would be
good for a few minutes than rapidly go to garbage.

I found the problem and fixed it. My problem was a bad electrolytic
capacitor in the IF section.
It is a 1uF cap - C135. This is the coupling cap for the unity gain amp
provided by IC6A.

So in my case, replacing C135, a 1uF electrolytic capacitor, on the IF
board - which is located at the top of the IF board to the right of IC6,
fixed the problem.

Both of the comments posted sounded like my problem. But these things can
all be different.
In my case, the audio went garbled and would come good by cycling the power
on-off.
Since it would come good with a quick on-off, I knew it wasn't a thermal
problem and guessed
that it could be a capacitor charge problem.
I determined which mode (AM-FM -FMN-SSB) it was doing this on and then
traced the audio back using an o-scope untill I found where it crapped out.
C135 was the bad dude.

Soldered in a new one (MIL-Spec and not radio-shack) and I was back on the
air in a few.

This may-or-may-not be what you all are experiencing, but it may help

good luck

Rick W4RP

Woody <rafman@kerrlake.com> wrote:

I think he does work for the cell phone industry.

The government does not want people to have an encryption method that that they can't decode. There is little difference between the cell phone Lobby and the government. One is paying the other.

I too have often wondered why Cell Phone Industry used nbFM when other methods were available. They aren't concerned for our privacy. I totally agree they are only interested in how to make a buck. And maintain the "appearance" of privacy. Also think about it...The NSA probably had a hand in what was allowed to be used. The digital phones CAN also be monitored. PCS is just a method to get more out of the bandwidth that they have. Did you know that when you leave the tiny coverage area of a PCS phone that it reverts to plain ANALOG?

By the way I just bought a Cell Phone from Ameritech they have the best deal for personal use . (And the best coverage in OHIO). 1 month free airtime and no connection fee. I tried to get Airtouch to beat the deal but they could only come close.. about 5% higher overall if you use it less than 50 minutes/Mo. They have a slightly cheaper per minute rate if you haggle with them for an hour but the monthly fee is 2.00 bucks more. Thus Airtouch becomes cheaper than Ameritech ONLY IF you haggle and get their best rate and ONLY IF you talk more than 50 Minutes per month. 50 minutes is the crossover point. I'm not a big user just wanted something for my wife. My kids use it endlessly in the car since it's free for a month. And you can return it anytime in the month. But don;t expect a better deal from Airtouch I tried...

A had a VERY interesting conversation with an Airtouch Manager after I haggled with her saleslady for a while. Finally , she said we have NEVER been Nor EVER WILL be less expensive than Ameritech. We believe we have better service Etc..Blah blah blah. I asked " If you have better service then why were you closed last night at 7:30 when I first came by and aren't open on Sunday either?" Some "Service" and their phones are junk and cost more! What she was saying is they can always find some deep pocketed Lawyer or Drug Dealer not concerned about price to buy their junk. Anyway I'm sticking with Ameritech they seem to be better for Analog and the digital System in Cincinnati has little coverage.

See for youself. If you want a head start ask about the Chamber of Commerce deal.(called the "Chamber Deal" for short.) It's better but not near as good as what you can get at Ameritech without the hassle..

Or ask for the Airtouch AAA automobile club deal , wrong again!

Good luck. I don;t have any ties to the communications
industry...other than my hobby and ICOM R-7000 receiver!

>Like I said in rec.radio.amateur.misc, if you don't like it, sue me! I
>have nothing to lose.

Except for maybe your house, your car, your bank accounts, stocks, bonds, future earnings, etc. Libel and defamation is not something to fool around with, Eric. Especially in consideration of the fact that we live in a highly litigous society.

>Otherwise, stay out of my life. (interesting that your path is EXACTLY
>the same as HLKINGSTON@aol.com and FRNKBURNS@aol.com)

Unfortunately, you are about as misinformed regarding the Internet as you appear to be about the defamation laws. I'll let you in on a little secret, Eric...ALL AOL accounts have the same path since they ALL originate from the same domain!

Go back to school, Eric. Your ignorance of even the most basic concepts is embarrassing, to say the least.

After owning this scanner for 8 months, I finally got around to try recording with it. Trouble is the manual isn't very precise about this, so I experimented and here's what I found:

The "line out" jack on the front of the scanner is an internally attenuated signal that can go directly into the "MIC" or "AUX" jack on the tape recorder using a straight patch cord. The signal strength of this output is controlled by the scanner volume control. This means when I use this jack to record I can't record without having the scanner speaker on also. (I suppose I could insert a dummy plug into the "Ext Speaker" jack silence the scanner speaker, but I,m not sure this is OK for the scanner speaker circuit - comments?)

If I use an "Shielded Attenuating Audio Cable" (RS #42-2152A) plugged into the "Ext Speaker" jack on the front of the scanner and into the "MIC" jack on the tape recorder, the volume control still controls the record level but the scanner speaker is off - "silent recording."

The RCA jack on the back of the scanner is a switch circuit that will cycle the "Record" mode on the tape recorder when connected to its "REMOTE" jack. I had to make the cable for this, wasn't available at RS. This switch closes each time a channel that is programmed to RECORD comes active. The two output jacks on the front of the scanner are always active, you can record from these any time..

Listen and Ye Shall Hear!

> dead about a week ago.... Thanks for the help

The trunk is still quite active, however there seems to be a bias towards
the 866 & 867 frequencies. For reference, the Atlanta trunk is:

856.4625 .4875p (-) inactive
857.4625- .4875 (p) phone patch
858.2375 .4375 .4625- .4875 .7625 .9375
859.2375 .4375 .4625 .4875 .7625 .9375
860.2375- .4375 .4625 .4875- .7625 .9375
866.0625 .3125 .8625
867.1875p .3125

Hi people!

I'm taking a trip to Dallas, TX and need some frequencies.

I'll actually be staying in Irving, TX right outside of the airport, I believe. If someone could be so kind as to pass on local police frequencies, city police, and anything else of scanning interest in that area, I would appreciate it. Also, frequencies for DFW (international?) airport would be great too.

By the way, has anyone had any trouble transporting their radio equipment via airplanes? I've flown around, but never brought my gear. Have you carried the equipment onboard? Or put the equipment in a suitcase? Let me know.

Thanks!

P.S. I leave thursday, so a response before then would be helpful!!

I have both units.
I find the 8000 for me a better scanner, but the R10 is not bad.
If you live in a area with a lot of cellular traffic and pick up a lot
of intermod you might want to go with the R10. You can get software
like scanware that works great witth the R10.

Pleeeeeeeeeeeese give the possibilities a more succinct
answer: like "where are you going to be in the USA?"

it's a petty big place and you can get lost.

There are many www sites for police agencies.

go to http://www.altavista.com
search for "police radio frequencies"

major cities listed with lots of stuff for your entertainment.

there are more, but this will get you warmed up.

What state or city will you be at?

bill conduit
etc.

1071. Uniden EXP 905 - digital? (was Re: 900 MHz cordless phones)

Newsgroup: rec.radio.scanner
Date: 1997-05-13 00:00:00 UTC
From: spammers@mustdie.com
Message-ID: <wsandersEA4o5o.Bzu@netcom.com>
Source record: 197836
Cross-posted to: alt.consumers.experiences,misc.consumers,rec.radio.scanner

I just bought a Uniden EXP 905 - although the box has various blurbs about "secure voice communication" and digital-blah-blah, I wasn't expecting a fully digital phone, certainly not spread spectrum. The phone was marked down to $110 at the local Target. I took it home and I cannot pick up any trace of the voice channels on my scanner, either between 902 - 905 or between 915 ad 918, where the manual says the frequencies are. I can pick up some vaguely digital-sounding signals, but no single strong signal. So what's going on here? Is the phone really a spread spectrum in disguise? Is my scanner busted? (I can pick up what seem to be other 900 Mhz phones in the vicinity in the bands mentioned above.)

The phone seems fine - it's nice and loud which not all wireless phones are. Range is a couple hundred yards or so with the antenna inside on the second floor next to a window.

-w

Hello,

I am going to visiting suburban Chicago in less than a week. I was wondering
if anyone out there would happen to have some police and fire frequencies
for the following cities:

Hoffman Estates
Downers Grove
Oak Brook
Schaumburg
Lombard
Lisle
Naperville
Wheaton

Cook Co. Sheriff's Dept.
DuPage Co. Sheriff's Dept.

Any information if the form of a simple list, would be greatly appreciated!
Please e-mail directly to my account, as I don't get on the newsgroups on
a daily basis.

Thanks!!!

Tom,

It would have to be a pretty wide filter...most of the spread spectrum
phones use a window of frequencies several megahertz wide...

I have a Radio Shack spread spectrum phone and am able to detect no
trace of it with my PRO-4045 scanner.

Greetings,
I have a Bearcat 200xlt that I use quite a bit in the car and am wondering if there is a way to run it off of the car's 12-volt power. Will it work to simply plug a 12-volt car adapter into the recharging outlet on the battery (My gut tells me this will do bad things to the battery...).

Any help would be greatly appriciated!

There's a Uniden EX 905 in my J&R catalog for $139; if this is your phone, it's advertised here as a 900 MHz digital, and also as "30-channel autoscan," but no mention of spread-spectrum.

Unless you have a digital scanner, those vaguely digital-sounding signals you're hearing are probably coming from your phone, but that's the closest thing to voice-band audio you're going to hear.

Sounds like your scanner (and your phone) are operating as they should.

No need. I've already published a huge list of IFs covering
hundreds of scanners -- both old and new models. See "IF Compendium,"
in the Scanner Equipment column of May 1996 Monitoring Times magazine.

Reprints of articles from Monitoring Times are available
for $3.00 each from:

Grove Enterprises, P.O. Box 98, Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

Note: I don't get any part of the $3.00.

There are a lot of Atlanta area MDT systems that can be received using the
Motorola MDC4800 receiving program / scanner interface that seems to be
discussed on this newsgroup every so often.

This is by no means a complete or correct list, but you might want to
try the following frequencies:

(All frequencies in MHz)

851.7625 Public safety (Gwinnet County???)
852.6375 Gwinnet County
852.8375 Gwinnet County
853.1125 Atlanta City
854.8875 Fulton County
855.7125 DeKalb County
855.9625 Unknown public safety
857.2625 Dekalb County

The following non-police systems use the same Motorola protocol:

453.950 Marta (haven't seen any real traffic yet...)
855.2875 Unknown package delivery company
855.8375 ARDIS system

Using a different program posted to this group you can view
RAM Mobile Data's Mobitex traffic on:

939.2625 - 939.3750 (block of 10 channels; 12.5KHz spacing)

And some systems that are not using the Motorola or Mobitex protocols:

854.1275 User unknown
856.2375 User unknown

That should be enough to get you started.

Watch out for an asymetrical wide fm filter in some of the units which
makes listening to any WFM broadcast a bit distorted.

It would appear to me, from previous postings by this individual Masa, that the original appender's intent is to simply find ways to hear cellular phone images by making use of the radio's IF. No where is there mentioned that the information gained will be shared. The original appender can bust his/her hump and collect and collate this information themselves or simply fork over the measly $3. Mr. Parnass was only trying to help this individual and I'm sure the whopping $3 is sure to make the shareholders of Grove Enterprises jump with joy at this added income.

And no, I am in no way affiliated either personally or professionally with Grove Enterprises.

> >Note: I don't get any part of the $3.00.
>
> No but the more profit Grove earns the better it is for those who earn
> money from Grove.

Oh please. Are we forgetting where we live? You do live in the United States do you not? If you do not than you have no right to begrudge a company in the US. If you are in the US, then the operation of the capitalist system has obviously

eluded you. Whereas some companies take it to the form of piracy, I do not intend to hold Bob Grove and those who work for them and have done much for our hobby in anywhere near the same light.

As you can tell, it's late and I'm tired...not only physically but also of those who intend on spoiling our hobby with this pointless bickering and nonsensical ravings. A lot of good that does us who come here to share information and help each other.

Good night!

Date: 1997-05-13 00:00:00 UTC
From: bc6qc@cuny.campus.mci.net
Message-ID: <bc6qc-1305971749210001@s01-pm24.snaustel.campus.mci.net>
Source record: 197865

Would anyone have a list of frequencies used by the Big Apple Circus?
They apparently have all kinds of radio equipment ranging from wireless
mikes and intercoms to radios that they use for personal comms (instead of
telephones).

Thanks,
David

1101. Nickel Metal Hydride vs Ni-Cad

Newsgroup: rec.radio.scanner

If I can wade through the Blackmail, Radio Shack, FBI, personnal attacks crap, I have a question seemingly about the newsgroups topic.

Does any of you dealers plan to have any BC235s at Dayton?? I thought I saw someone say they might actually have some. If so, please e-mail as I was hoping to get one there quicker than wauiting for one of the 4 I have ordered. First come, first (and only) cash.

Tom

ATTENTION - DAYTON ACTIVITIES

all interested radio hobbyists and all PARG MEMBERS

The Phantom's Amateur Radio Group International (PARG) will be holding their annual Dayton meetings this year during the Dayton HAMVENTION weekend, May 17, 1997.

All PARG members should meet on the PARG repeater (443.575 MHz, with a PL of 100 HZ). This frequency has been cleared with HAMVENTION officals & is also listed on their web page (HTTP://www.hamvention.org) in the un-official activities section.

The PARG - Dayton activities this year should include the annual PARG dinners held friday & saturday nites, amoung other activities as have been done in the past.

At the PARG dinners, a few of the topics of discussion will include the internet, lids, repeaters, and interference. Featured speakers will include:

Larry F. Johnson, K7LJ, PARG Co-founder
Justin Bousquet, AD7O, PARG President
John Mackey, Jr., KA0SSF PARG Secretary & Co-founder

At the time of this writing, it is still un-clear if Rick Larsen, KD0XD, PARG Midwest Division Co-chair, will be able to attend. If Mr. Larsen is in attendence, he will present on the most recent activities of the PARG midwest division in addition to the already scheduled topics.

Also, due to actions in the past on various repeaters in the Dayton area during Hamvention weekend, the PARG Interference Committee will be active during the Hamvention weekend in Dayton. The exact level of activity from the PARG Interference Committee is not yet clear. (actively pursuring or simply monitoring is yet un-decided)

For more information please go the the PARG web page: HTTP://www.teleport.com/~mscott/dumb.shtml or e-mail: Jmackey@usa.net. The Dayton Hamvention web page is HTTP://www.hamvention.org.

73's John Mackey, KA0SSF, PARG Secretary

What more can you say about a radio that comes out of the box with:
76 - 200, 300 - 700, 800 something to 999
144-148 TX, 430-450 TX
5 watts out
112 memories
alpha numeric memory
CTCSS encode
DCS encode/decode
DTMF memories
Auto ranging on simplex

And with the tip of a soldering iron:

136 - 174 TX
420 - 470 TX

Giving you a marine radio, business radio, public service radio, GMRS radio, industrial radio, etc.

You ever try ordering your food at McDonalds over their headsets?

Steve

I'm glad you like the radio.
I don't do to the fact it can only monitor one band at a time.
I have had over 10 ht's in 3 yr period. This was one I had for about
3 weeks. You like anyone else has a right to the radio they pick.
Have fun with your rig......

I've worked in retail for a LONG time. You should realize that sales people aren't just people that ring you through the till and tell the cashier what to charge you, they are to help consumers get the items they need so the consumer is happy and will come back...

EVERY "sales person" I've ever talked to in a radio shack has not been of much help unless they look in some kind of book or get back to me (which rarely happens). Every sales person in every store in the country SHOULD have what they call "PRODUCT KNOWLEDGE". The radio shack people do not have "PRODUCT KNOWLEDGE" beyond the obvious functions of the average telephone or answering machine etc.

The prices in the store do not reflect this either. I find that radio shack is priced higher than a specialty shop, and the specialty shop has better service and better product knowledge. Radio shack pays idiots like you with little product knowledge basically nothing, and keeps a larger proffit margin. Don't you realize that? You are working for peanuts + commision and they take the rest home.

>Then Shut up if not. You don't even begin to understand how much crap

Beware: you will probably not be very satisfied with your ar8000 until you get the
"wandering birdies" problem fixed (replacing the crystal), and depending on your
usage pattern, you may also be haunted by the 'squelch stuttering' problem.

Then, if you fix these, you may as well kiss your warranty goodby (unless you can
find a dealer to do these and support the warranty afterward)

Farnell carries tagged AA Nickel Metal Hydride cells with a capacity of
1.2AH, at about twice the price of their standard (tagged) 0.6AH NiCd
cells. Order code is 536-970.

Perhaps...but you must realize that very few specialty shops exist when compared to the numbers of RS stores. RS is everywhere...Podunk, Maine to Tentflap, California. Just as in a 7-11 type store, the prices might be steeper than other places, but it isn't always easy to find all those "other places." The slightly higher prices allow RS to have all those stores. Would you rather have a discount on a radio that you must drive 200 miles to buy, or pay a bit higher price and get if from the store around the corner? It depends on the individual. Also, the prices are the same in every store, which alleviates the hassle of bargaining. (I know that some folks enjoy haggling, but many don't.)

I guess you have to look at the reason RS exists...which is to make money. (What fool would go into business with the intent to lose money?) RS makes a great profit, they have literally millions of customers, and they are growing all the time. They must be doing something right.

Just my observations of things as the world goes by...nothing more.

Scanner frequencies for this years Indy 500 can be found at:
www.indyweb.net/~bravo/index.html

These scanner freqs are updated all the time and are current. When you get to the page, go to the links section, and then go to scanner freqs. I have personally tried the frequencies and they are pretty accurate.

The same thing can be said about how they keep up there yards. Over the
years I have been over to several hams homes. Most of them have been
overgrown with weeds, dead grass, and bird crap stains. I hope that none
of them have kids. It would be a shame to populate the world with more
of these types.

I bought a AOR AR2700 which according to the guy who sold it to me, the back of the radio, and the manual has "0.5 - 1300Mhz Coverage NO GAPS"...

Well that isn't so. It does have gaps, right where cellular is.

Before I take this back, is there an easy way to get the cellular freqs back on
this scanner?

Thanks,

RJ

I would like to introduce you to a new tool : The Digital Experimenter.
The Digital Experimenter is a usefull tool that you can use to desing
digital circuits and to debug a malfunctionning circuits.

The Digital Experimenter includes basic input and display functions that
permits the designer to concentrate on the application instead of the
display.

Display circuits (such as BCD 7 segment displays) can take a lot of
space. With the Digital Experimenter, you have four BCD 7 segments
displays avaliable so you don't have to bother about the space they
use. There's also an 8 bits binary display, two bounce free logic
switchwes, 8 data switches, fixed and variable square wave frequency
generator. You also have access to four SCHMITT Triggers.

As you can see, there's a lot of usefull tools that the designer often
needs. All these functions are on a PCB that plugs directly on a
beadboard. If you want to know more about this wonderfull tool, come
visit our homepage at:

http://www3.sympatico.ca/ldee/injueng/

Or email us at:

mailto:ldee@sympatico.ca

It is still illegal even if you are the licensee for both bands.

Reason: Although a ham needs no type acceptance to convert a radio for a
non-ham
band to a ham band he may use, type acceptance IS required for any rig
used on a
non-ham band.

This I know, having been the station licensee in 4 different radio
services and a
1st Class RTL course,(which I completed, but was too young & too broke
to become

a full 1st Class RTL'ee), and am now studying for my own SW broadcasting license,
which is the only other radio service in the US that type acceptance on the rigs,
(it must only pass a specs inspection, according to Uncle Spam... er I mean Sam).

non-ham band.

This I know, having been the station licensee in 4 different radio
services and a
1st Class RTL course,(which I completed, but was too young & too broke
to become

a full 1st Class RTL'ee), and am now studying for my own SW broadcasting license,
which is the only other radio service in the US that type acceptance on the rigs,
(it must only pass a specs inspection, according to Uncle Spam... er I mean Sam).

1152. Air Freq Abbreviations???

Newsgroup: rec.radio.scanner
Date: 1997-05-13 00:00:00 UTC
From: jms20@po.cwru.edu
Message-ID: <19970513143724239302@x-wing.lit.cwru.edu>
Source record: 197932

Greetings,
I have begun listening to the frequencies used by Cleveland Hopkins
airport and have a couple of questions regarding the abbreviations that
are being used in the frequency list (downloaded from
http://www.airnav.com). The list is

UNICOM: 122.95
ATIS: 127.85
CLEVELAND GROUND: 121.7
CLEVELAND TOWER: 120.9
257.8
124.5
CLEVELAND APPROACH: 124.0
360.6
123.85
126.55
CLEVELAND DEPARTURE: 118.15(054-233)
118.9(234-053)
CLEARANCE DELIVERY: 125.05
CLASS B: 118.9(SE)
124.0(W)
125.35(ENE)
360.6
EMERG: 121.5
243.0
PTC: 125.05
RAMP CTL: 130.97

Would some kind soul please lanswer the following:
(1) What is the UNICOM frequency used for?
(2) What is Clearance Delivery?
(3) What does Class B refer to? (different aircraft types perhaps???)
(4) What is the PTC frequency?
(5) What is the difference is between 'ramp control' and 'ground'?
(6) Why are there multiple tower frequencies? (backup perhaps?)
(7) What is the difference between all the listed approach frequencies?
(the departure frequencies are dependant on runway direction but
the approach freqs don't have this designation...)

Thanks for any help you can give me!
-John

From: tandkmoran@aol.com
Message-ID: <19970514205101.QAA03935@ladder02.news.aol.com>
Source record: 197737

My comments apply only to frequency allocations / users in the United States, I have little allocation data for the rest of the world on low band. Sounds to me like what you are hearing are images of cell phones, though low band skip from other countries remains a possibility. There are no Amateur Radio allocations between 30 and 32 Mhz.

37.89 - Not an allocated frequency
39.85 - Not an allocated frequency
40.20 - US Federal Government (Mostly Army & USAF)
40.90 - US Federal Government (Army Convoys & Army Aero Ops)
41.25 - US Federal Government (Army Missile Tests)
42.30 - State Police Agencies Mobiles
42.59 - Not an allocated frequency

Its a BEARCAT BC100XLT and used its worth maybe 75 bucks in mint shape.
Its always nice to recover what we have spent on used gear but if thats
what you paid you got took! Thats more than this radio sold for new at the
time it was discontinued.

Which brings up something I've been wondering about with these radios. Lets say I own a PRO-60 and I'm searching 138 to 144 Mhz in the AM mode using 25 Khz steps. Are the cellular images strong enough to mess up my search? I want to know because the Indiana Air National Guard F-16 jockeys kicking butt in the Hilltop MOA are a WHOLE bunch cooler to scan than corporate clones getting their voice mail.

Brett Reinbold wrote:
>
> I was wondering what is the range in miles, of the average handheld
> scanner? What about the average base scanner? Thanks!

Handheld scanner's have the same sensitivity as base scanners,
assuming that the overall quality is the same. I find that modern
receivers have a "minimum squelch breakthrough" of about -115 dBm
through lab testing, which is very good.
The trick to getting longer range is with the antenna.
Rubber Duckies have no gain- if you
are interested in receiving a powerful signal over a couple of miles
or a weak signal over hundred's of feet, consider attaching a
better antenna to your receiver.
You can make very inexpensive indoor attic or outdoor antennas using
formulas readily available in amateur radio books. Check out
your local Radio Shack (no flames please) for booklets on how to
become a ham. These booklets include theory that guide you
with cutting the element lengths to make resonant antennas, which
do have gain.
Best Regards & Good Luck,
Al

The 2045 may be easier to use but the 2042 does what it is
suppossed to do as a radio. It has better sensitivity,
selectivity and image rejection than the 2045. Simply put...
you get what you pay for. You'll have to decide what is more
important...ease of use or performance.

The 2042 also give you the option down the road of connecting
to your computer should this ever strike your fancy!

Good luck!

1169. R10 vs AR8000

Newsgroup: rec.radio.scanner
Date: 1997-05-14 00:00:00 UTC
From: CHANEL CORDELL <CHANEL@GROVE.NET>
Message-ID: <337A3509.8ED@GROVE.NET>
Source record: 197749

The AR8000 will outperform the R10 in distance and sensitivity. The AR8000 is easier to use than the R10. Although, the R10 modes are more easily accessible then the AR800. The R10 english version of the manual has several left out or wrong procedures. The AR8000 shpments are being halted be the FCC until the units are changed so that they cannot be modified. This will probably happen to the R10's when they find out it is a hardware mod and not software.

I hope this information has been helpful, if you have any questions please contact us at {704}837-7081.

Best regards,

The Grove Scantenna is an omni-directional antenna, that would be great
for picking up the Mir Space frequencies. This antenna is compatible
with the BC9000.The BC9000 would be better than the BC3000.

For more information go to www.grove.net.

I hope this information has been helpful, if you have any questions
please contact us at {704}837-7081.

Mobile Data Terminals. They are used in some areas by police to run license
and registration information, etc. rather than doing it over the air voice.
Basically a terminal in the car links to the computers at the police station
over a radio link.

1191. GMRS Guide Released

Newsgroup: rec.radio.scanner
Date: 1997-05-14 00:00:00 UTC
From: bkobb@nova.org
Message-ID: <bkobb-1405970715060001@ab1-004.dial.nova.org>
Source record: 197789

The Tenth Edition of the GMRS (General Mobile Radio Service) NATIONAL REPEATER GUIDE is now available from the Personal Radio Steering Group, Inc. The new edition describes all known or licensed GMRS repeaters -- more than 3,400 in the U.S.

Repeaters are essential to the enviable nationwide coverage of GMRS. They retransmit users' signals for effective communications. GMRS repeaters are typically operated by private individuals, user cooperatives, or local volunteer teams. GMRS repeaters represent an estimated $9 million in infrastructure investment.

1997 is the fiftieth anniversary of the GMRS, the oldest of the FCC's private wireless services intended to support personal and family communications. Today, GMRS is one of the fastest-growing private wireless radio services, with more than 16,000 licensees. The Personal Radio Steering Group, (PRSG) founded in 1980, is the national advocacy organization for GMRS licensees.

The 270-page GUIDE assists the GMRS traveler in obtaining local travel assistance or to report local highway emergencies. GMRS users can also use the GUIDE to assist with resolution of local interference problems.

Listings in the GUIDE are organized by state and major urban or regional areas. For each repeater, information on operating channel, station address, coverage range, and contact person mailing address and phone (to request operating permission) is listed. Additional information about control tones (usually needed to activate the stations) and special operating characteristics is also shown where available.

The GUIDE includes a cross reference by operational names. These specialized names are often used to identify local user groups and cooperatives. The GUIDE also includes an extended discussion of the desired GMRS operating procedures developed over many years by the national user community.

Information in the GUIDE was collected from the FCC licensing database, then extensively supplemented by input from many hundreds of FCC licensees and repeater operators nationally. The widespread support of this publishing project demonstrates GMRS users' willingness to share their stations to provide local travel assistance and to report travel emergencies.

Among the PRSG's hundreds of print and online information products are the bi-monthly PERSONAL RADIO EXCHANGE newsletter and extensive licensing and GMRS operating guidelines.

Copies of the GMRS NATIONAL REPEATER GUIDE are available from the PRSG at the address shown below for $25 (including shipping).

> Sorry if I offended anyone.

Glenn,
I can understand how the proposal to buy the information "rubbed
[you]
the wrong way". Such things raise my hackels too. But Mr. Parnass is
and has been a good contributor to this group and that is what I like
to keep in mind. He writes a nice monthly column for Monitoring
Times[MT]
which many of us depend on for radio reviews we can trust. To get the
article Mr. Parnass mentioned, the $3 would be going to Monitoring
Times...a company which, for the lobbying and support we get from it
in the form of Bob Grove himself, deserves our support as much as
possible.
One thing to think about is that since Mr. Parnass writes the column
for Monitoring Times, once submitted, it becomes the property and
copyright/intellectaul property of Grove Enterprises. This means Mr.
Parnass would be unable to give us this info for free since he has given
up his rights to it. I'm sure if he had not submitted this info to MT,
he would have freely shared it with us for our benefit....as he does
with his many FAQs.
I must admit that it was not your posting along that sent me on a
"tirade". I apologize to you if I came across too harsh. The original
append to which Mr. Parnass answered borders on what I'll term illegal
activity. Certain individuals seem to think the only reason to have a
scanner is to listen to cell and cordless phone converstaions which we
all know is illegal. I get tired of all the postings I see on this group
related to this activity. What people do on their own time in private is
no concern of mine. When you bring it into the newsgroups, you are
broadcasting to the world. A fact which seems to be forgotten, not only
by cell-telephone users(who are mostly oblivious to the fact that they,
are using a radio and not a secure landline) but by those who post here
as well.
We all know that there are CTIA reps and snoopers who are actively
capturing all this info to help prove their case that we are all
"electronic stalkers" who deserve to have our equipment taken away.

These individuals are only helping to hurt our hobby and this by itself is enough to turn my stomach.
I want to thank you for your comments and taking the time to respond appropriately. I am pleased we were able to air our respective grievances
and hopefully come to an understanding without having to resort to the petty bickering and childish name-calling that is so prevalent in these newsgroups.
Take care and happy monitoring!

Strong signals,

I am not an expert either but I believe the block is in the firmware
(whatever that is) and cannot readily be altered .
Mine is the Australian version and is not blocked.
The software is available from the Winradio website and is the same
for each country except for language variations so I am sure the block
is not software based.

Thanks to all for your help. But this WFM theory would make me wonder if
it is the image of cell phones or a cordless that really is spread
spectrum. But I must wonder how many people who hear about digital
privacy buy a cordless because it has DFigital Codes & think that the
codes scramble your converstion.

I would have to agree with Chuck. I've tried to pick up my own
conversation with my Yupiteru 7200 and so far can not detect anything.

: >there are millions of other connection points where each segment of the
: >antenna connects to the main boom.

Unless I'm very much mistaken there is no reason to worry about good
electrical contacts between the elements and the boom. In fact some
arials even have the elements electricaly insulated from the boom.

The boom does not play any part in receiving the signals, it is
merely there to physically support all the elements.

In most designs of TV aerial ther is actually only one element in
the aerial that actually receives the signal. The rest are basically
set up to concentrate the signal on to that 'Driven' Element. I don't
fully understand how this works, but I think thet the signal induces
electrical eddies in the 'Parasitic' Elements, and these electrical
eddies then efectivly re transmit the signal on to the Driven element.
The boom takes no part in this. So there is no reason for a direct
electrical connection between the elements and the boom.

: >I took down the antenna and washed
: >it with a mild soap recently in hopes that something could be cleaned
: >off of those connnection points, but still, the signal level is half of

>same charging system as a Ni-Cad??????

I don't recommend it. Ni-MH uses a different charging system than
Ni-Cd. Ni-Cd are somewhat more tolerant of over-charging than Ni-MH.
If you overcharge a Ni-MH battery even once you'll notice a
substantial difference in capacity. That's why they use different
chargers which are sensitive to the voltage/current charge curve the
Ni-MH battery has.

Further, although Ni-MH batteries will hold a greater charge (more
mAh) they don't have as many charge/discharge cycles as Ni-Cd has.

Ummmmmm..... NOT GONNA HAPPEN!!!!!!!!!!!! Your scanner will NOT receive spread spectrum communications unless you have the NSA model which sells for considerably more than your yearly income and is only available to government agencies who are "protecting the people."

NFM DISCRIMINATOR CHIPS - BASEBAND AUDIO - SQUELCH GATE DATA
==========

There is a growing interest in tapping the baseband audio
out of various scanners for decoding of a variety of esoteric
signals, including CTCSS, SCA, FSK, RTTY, FAX, etc. By and
large, such signals cannot be taken from TAPE REC jacks,
headphone jacks, and EXT SPEAKER jacks because of the voice-band
filtering that is done between the volume control and these
output jacks.

Therefore, it is necessary to tap the "baseband audio" directly
at the output of the discriminator chip for your scanner. Table 1
shows a list of scanners, the discriminator chip(s) used in the
scanner, circuit symbols of those chips, and three pins of general
interest on the chips: RF-Input, Scan Control, and, of course,
the baseband audio (discriminator output) pin.

Even though your scanner may not be listed below, try to find
its discriminator chip, and chances are it will be listed with
one or more scanners below, the pins of which will be the same
for your unlisted scanner! Corrections and additions to this
list are requested. See my mail and other addresses at the end
of this file.

For hookup information, see just below Table 1.

TABLE 1: SCANNER DISCRIMINATOR CHIP PINS OF INTEREST

HOOKUP PROCEDURE
==========

If you need the raw Discriminator baseband audio signal for
external purposes, the best way to access it is via a jack
installed in a convenient, unobtrusive location on the scanner.

1. Install an RCA or other jack in a desired place on the
scanner's external case, typically the rear panel.

2. Connect the shell or outer frame part of the jack to scanner
chassis ground.

3. Connect the (+) leg of a 2.2-uF tantalum capacitor to the
Discriminator output Pin. (Capacitor should be tantalum,
but can vary in value from 1.0-uF to 10-uF at a voltage
rating of 25-50vdc.)

4. Connect the center conductor of a shielded coax (RG-174, etc)
or shielded mic cable to the (-) leg of the capacitor.

5. Connect the shield of the cable at this end to a nearby PCB
ground trace or spot.

6. Connect the center conductor of the other end of this cable
to the center or hot lug of the jack.

7. Connect the shield of the cable at that end to the ground lug
of the jack.

8. Fabricate or buy a shielded patch cable with one end to mate
with the new jack on the rear of the scanner at that end....and
the other end to mate with whatever jack is on the tape recorder,
processor, decoder, or whatever device is to be connected at the
other end.

"SCAN CONTROL" AND SQUELCH PIN DATA FOR
UNIDEN SCANNERS and Realistics made by Uniden
==========

Uniden does their darndest to make it difficult to
hack their scanners. You guys have some work to
do. Here's the deal: Even though all NFM
discriminator chips have a SCAN CONTROL pin,
Uniden doesn't always use it! Some Uniden
scanners have a separate Squelch circuit with the
SCAN CONTROL pin on the discriminator unused! You
have to find the real Squelch circuit, and then
determine the Logic for that circuit. It's easy,
but differs from one scanner to the next, and I
can't cover them all. I need your help.

See Table 2 below for a good reference. By and
large, those with scanners of Uniden origin have
to tackle the preliminaries in this fashion:

1. Locate the NFM Discriminator chip - you will
find the Audio pin from Table 1. It remains valid.

2. Determine if the SCAN CONTROL pin on that chip
is used. (Follow its trace out on the PCB)

A. If so, then determine the logic order. If
the SCAN CONTROL pin is used, then we can
use it!

B. If the SCAN CONTROL pin is not used,
then locate the real Squelch circuit.
The schematic and block diagrams in
the service manual will be helpful.
Uniden uses chips like NJM2902,
NJM2904 & NJM3403 to generate Squelch
logic. Use your voltmeter to find a

spot where the Squelch logic is 0v and
5 or 8v, depending on the setting of
the Squelch control. Table 2 shows
details for those Uniden-made scanners
with which I am familiar.

TABLE 2

Hold down the MANUAL KEY at the same time you are holding down the # 2 & 9 keys, and turn the scanner on. This will errase the memory.

John, I also have a BC200XLT and what I was able to do was to go to Radio Shack and buy a cigerette lighter plug with multiple ends that you can attach to the cord. One of them will fit the battery on your 200, make sure you have the polarity set right. It works fine for me.

1214. Re: Other Info On Pager Freqs

Newsgroup: rec.radio.scanner
Date: 1997-05-14 00:00:00 UTC
From: Zjoey549952@aol.com
Message-ID: <5lb2vv$7d9$1@news01.deltanet.com>
Source record: 197812

The first thing I would do is stick my frequency counter w/rf meter next to it for a few days and see what was coming out of it.

It does seem ridiculous to make a transmitter for a single use. Someone is shoveling something here...

If it indeed talks back, it's probably a two-way pager format. I don't know if POCSAG or FLEX or whatever is the most popular for two pages. There is probably no other service they would be using except a paging system; building a custom nationwide network just for the purpose of these little electronic TV guides would be ludicrous.

The other possiblity is that the drones at RS recorded the serial number when they sold it to you.

Joey

4 meg 72pin parity ........ $ 25
30-pin memory SIMMS: 256K 60 or 70ns ($4)
80ns ($3)
100ns ($2)

OP AMPS... I have a bunch of op amps and comparators
that I've been collecting during the last couple of years.
They are new, never used, and are marked. In most cases
I also have the literature with characteristics, pinout, and
suggested circuits. There are singles, duals, and quads,
with about 50 or so in the DIP form, and another 20 or so
in surface-mount form. Some are hi-frequency (up to 900
mHz), others are micro-power. You get the whole lot for
just $10 + shipping, probably another $2-3.

------------- UV - EPROMs for sale ---------------
These are 27C512 EPROMs, erasable by ultra-violet light. The
catalog price is a little over $10, but will sell them at $3.50 each,
plus shipping. I have 22 available....

---------------- P O W E R S U P P L Y M O D U L E S ------
I have several power supply modules available. These are
complete, requiring only the DC input voltage. The modules
contain the necessary IC regulator and caps or coils as
needed. These are new, never used. The boards have the
input and output terminals marked.
```

1.) 2" x 2" PCB with regulator, transformer, etc, installed.
8V to 16VDC input, +12V / 1A out.
6 units available at $8 each, plus shipping.

2.) 24pin DIP regulator-on-a-chip. No external components
are needed! Up to 40VDC input, +5V/1A out.
3 available at $5 each, plus shipping.

.............CPU CHIPS............
AMD 386DX40mHz. A great way to speed up those older boards!
Only $ 8
.
.............MODEMS..............
2400 baud external modem with power supply. The easy way to
add a modem, since you don't have to open your computer to
install it! Only $ 9.
.
2400 baud internal modem card. Only $ 5
.
2400 baud PCMCIA fax/modem card (9600 fax). Only $17
(only 2 available)

14.4K baud PCMCIA fax/modem card. Only $29
. (only 2 available)

14.4Kbaud internal fax/modem card. Only $25

add postage to listed price.
e-mail me if interested...

New Scanner User FAQ

In light of the repititious nature of newsgroup activity and the abusive replies that sometime follow, I took it upon myself to create this "FAQ" to help cut-down on unnecessary activity and provide helpful hints for those new to the "scanning scene". I am not Big Brother...nor am I attempting to regulate control or moderate this newsgroup. It is simply another way for us to share information in an efficient manner.

If it is received positively, I will make every attempt to post it on a regular and timely basis to ensure all beginners have a fair opportunity to see and make use of it.

This document is divided into the following sections :
What's Illegal
Cellular-capable Scanners
Another Cellular Note
Look Before You Post
Don't Ask What The Best Scanner Is
The Hottest Models
Scanner Models FAQ
Scanner Dealers FAQ
Frequently Asked Frequencies
Your Scanner On A Plane
Magazines & Newsletters
Some Good Scanner Web Resources
Courtesy

What's Illegal

In its simplest form, US Federal laws(Communications Act of 1934, Electronic Communications Privacy Act of 1986, Telecommunications Disclosure & Dispute Resolution Act of 1992, Digital Telephony Bill of 1994) make it illegal to

1. Repeat what you hear to anyone but the transmitter or intended receiver of the transmission
2. Use what you hear to aid in the commission of a crime
3. Use what you hear for personal gain
4. Listen to transmissions relating to the following services : cellular phones, cordless phones, public land mobile systems, paging services, satellite/microwave/studio-to-transmitter links and broadcast point-to-point relays.

Recent developments in the Gingrich fiasco have also prompted Congress to revise its interpretation of certain laws. They now claim that it is illegal, and thereby punishable, for any person or company to alter a radio so that it may receive cellular frequencies. For several years now, several companies and businesses made good money by selling you a cell-capable scanner, then had you ship it back to them for modification at a modest cost. The FCC has put an end to this.
There may also be state or local laws which you should make yourself aware of. Most pertain to usage of a scanner outside of your home(some locales make it illegal to use in public or in a vehicle of any sort.)

Cellular-capable Scanners

Provisions to the above mentioned laws make it illegal to produce or import for the purpose of sale, radios which are able, or can be easily modified to pick up cellular phone frequencies.
Therefore, after April of 1994, no new scanner for sale in the US is capable of receiving cellular phone frequencies. The only way to find a scanner capable of receiving cellular is to buy one made before this date which has or can be modified, or to import one from a dealer in Canada, Europe or China/Japan. If you choose to import, you do face the risk that US Customs will detect said radio and they do have "legal authority" to confiscate it without reimbursing you for said loss since it is considered contraband.
One minor exception to this was the AOR AR8000 which can have its frequency bandplan modified via PC software. The US versions come with a bandplan that blocks the cellular frequencies. Simply downloading a bandplan without this block restores this range of frequencies.
Developments with the Gingrich fiasco have prompted the FCC to ban sale or import of the AR8000 since it falls under the "easily modifiable" category.
So in short...don't bother asking which new radios can receive cellular or can be modified to do so. There are no hardware or software keypad tricks to modifiy new radios sold in the US. Period! Buy a used one which can be modified or take your chances and import one.

Another Cellular Note

Be advised that there are some individuals who make an entire hobby out of listening to cellular/cordless phone calls even though it is illegal. They will inform you, and rightly so, that you don't need a cell-capable scanner to hear cellular phone calls on cell-blocked scanners.
By making use of image frequencies(which are harmonic byproducts of the receiver conversion process) you can hear the audio on frequencies which are within the tuning range of the scanner. The exact frequencies on which you will hear these images are dependent on the individual radio and the type of circuitry it uses so will therefore vary from radio to radio and manufacturer to manufacturer.

Look Before You Post

If you hang around the newsgroups for any length of time, you're bound to see the same questions asked repeatedly. Even the staunchest supporters of the hobby get tired of answering the same questions over and over again. Those of lesser maturity will even assault you with less than civil verbage.

My advice is to do your homework first. Follow the newsgroup to see what is going on. See what the recent developments are. Get a pulse for what is happening in this constantly changing hobby.

The probability is that someone else has asked the same thing you did in the not so distant past on the very same newsgroup. Start by pointing to http://www.dejanews.com/ with your web browser. This very nice service allows you to search the recent newsgroup archives. Simply type in what you are looking for and see what shows up. The more recent postings show up first with the original poster and the subject header listed. Be sure to try word variations(e.g. if searching for postings on the Radio Shack Pro-60 scanner, try Pro-60, Pro60, and Pro 60)

Looking for more information on a radio or accessory? There are tons of web sites out there with lots of information for free! Start by pointing to http://www.yahoo.com/ with your web browser. This is just one of many web search services allowing you to locate web pages containing items of your specification. As mentioned earlier, when performing a search try using variations to maximize your chances of finding what it is you are looking for.

Don't Ask What The Best Scanner Is

Almost once a week, someone will post a message that says something like "Which scanner should I buy" or "I want the best scanner there is" Well, well...that's a lot like asking "I want the best car". What does that mean? Best as in cheapest? Best as in gas mileage? Best as in fastest? Best as in crash protection? Ask ten people and you'll probably get ten answers. Having done this, the asking party is no closer to an answer than they were before.

And it's amazing how many are surprised when they get responses that list appropriate radios and find out they usually cost $500 - $700! This only goes to show that they had no idea what they were getting into and had done no research on their own. To all these people, I would like to offer up some fine deals on real estate in southern Florida.

After using DejaNews to keep up with recent developments and which radios are well-liked and which aren't, and Yahoo to look up manufacturer specifications on radios of interest, you're probably ready to post to the newsgroup to get details from the people who have actually purchased and used them.

Tell everyone what it is exactly that you are looking for. Give specific details and features. Tell what price range you are looking in. List the radios you have been researching. List the pros and cons from your "educated" point of view.

You'll get many replies from people who will give you their point of view. Try not to take any one person's answer as gospel. Be wary of those who proclaim "stay away from Acme Scanners...they're all crap" etc. You

should be able to get a feel for the true nature of a radio...whether it's a good one, mediocre or a real dog. Some responses may even list other radios you might want to consider.

The Hottest Models

To get a good idea of the today's hottest models, who makes them and how much they're going for, I have created a web page listing this information.
Here's a link to this page : http://www.qsl.net/n2mca/HOTTEST.HTM

Scanner Models FAQ

A very useful FAQ written and maintained by the author lists a large number of scanners both past and present. You'll find a listing of manufacturers and their current models, along with specifications and inside tips.
Here's a link to this FAQ : http://www.qsl.net/n2mca/MODEL.HTM

Scanner Dealers FAQ

Another FAQ written by yours truly lists a large number of dealers who carry scanners, communications receivers, HF gear, books, accessories, you name it! There are addresses, phone numbers and web pages listed. This is a great way to find out what's on the market along with pretty pictures and specs of all the hottest radios. And when you're ready to buy, all the information you need is right here. And using mail order, you can expect to save 10% to 20% over what you'd pay locally.
Here's a link to this FAQ : http://www.qsl.net/n2mca/DEALERS.HTM

Frequently Asked Frequencies

For a FAQ containing a list of frequently requested frequencies, try this link : ftp://oak.oakland.edu/pub/hamradio/docs/misc/scanner.faf

Your Scanner On A Plane

Federal Aviation Regulation(FAR) 91.21, Portable electronic devices, paragraph (a) states that "no person may operate...any portable electronic device on any...U.S.-registered civil aircraft".
Paragraph (b) goes on to list exclusions to paragraph (a) which includes (1) portable voice recorders, (2) hearing aids, (3) heart pacemakers, (4) electric shavers or (5) "Any other portable electronic device that the operator of the aircraft has determined will not cause interference with the navigation or communication system of the aircraft on which it is to be used."
Paragraph (c) goes on to state that the determination for safety in paragraph (b)(5) "shall be made by that operator of the aircraft on which the particular device is to be used." If you were to be a passenger on a private aircraft, this determination "may be made by the pilot in command" of that aircraft.
What this all says is that the FAA gives each airline the right to

deem what electronic devices can and can not be used on their planes. So if you talk to that airline's ticket agent, ask them what their policy is. If this is not possible, when you board the plane, ask the captain or first officer if you can operate your radio receiver.
If permission is given, you will be cautioned to only use your radio during the cruise protion of the flight. So keep it off during taxi, take-off, departure, approach and landing phases of the flight. The captain will usually make an announcement as to when approved devices can be turned on and when they must be turned off.

Magazines & Newsletters

There are a number of periodicals which exist that can help keep you up to date on the latest activities in scanning and radio monitoring. Listed in no particular order are

Monitoring Times
Popular Communications
The Scanner Club
National Scanning Report
Bearcat Radio Club

Unfortunately, due to hard times, RCMA and US Scanner News are no longer with us. Those with outstanding subscriptions to RCMA should have been transferred to receive their remaining issues from Monitoring Times. And those to US Scanner News should be getting Popular Communications.
There are also a large number of regional clubs that hold meetings and exist to swap information and frequencies all to increase the enjoyment of the hobby!
An excellent reference listing for local scanning clubs and groups exists on the internet and it's free! Simply point your web browser to http://itre.ncsu.edu/radio/faqs/clubs.faq.html and see what's there.
For a more up to date listing, consult Police Call(available at a local Radio Shack) or T.J. "Skip" Arey's latest book titled "Radio Monitoring - The How-To Guide".

Above all else, let's try to act like ladies and gentlemen. It is all too easy to misunderstand the written word. These days there is simply too much bandwidth being wasted with personal wars and flaming. It is also very easy, considering the level of anonymity involved, to forget that there are real people behind these words. Just because one is not in a face to face discussion with an individual does not give anyone more of a reason to be disrespectful.
Let us all try and be as considerate as possible. Ask someone a question for clarification if you are unsure. If it does turn into a personal battle for whatever reason, take it offline with direct e-mail. You'll gain no one's respect by wasting bandwidth bad-mouthing someone else and using foul language. It has been my experience that a high level of bad-mouthing and use of foul language is indicative of a low level IQ. Take a deep breath, count to ten...

Thanks for reading this. If anyone has other topics they feel would be relevant to put here, please send me e-mail with your suggestions.

Strong signals to all!

1225. FS: Zip Back-up Drive

Newsgroup: rec.radio.scanner
Date: 1997-05-14 00:00:00 UTC
From: mbay6969@aol.com
Message-ID: <19970514213500.RAA07445@ladder02.news.aol.com>
Source record: 197823

Zip back-up drive for sale:

Parallel port, portable, external back up drive, with 11 diskettes (100 MB each). Comes with manual, cable, original box, and packing, ...it is complete. Excellent condition, used only twice, got a Seagate from work (more storage capacity) so don't need the Zip.
Over $150 invested in the diskettes.

$125 USD, buyer pays shipping.

Thanks,

Mike

Hi. I have a Radio Shack (UNIDEN MADE) PRO-51 200 channel scanner I have never used. I used to work for Radio Shack and bought it when it was a hot item. I don't use it because I have a modified desktop (had a 2006 but sold it) now I use a Pro-2026 desktop. The retail on the PRO-51 is 299.99. I am willing to sell it at 175.00 or best offer

Source record: 197826

The BCT7 cannt be modified for reception of true 800-900MHz reception.
The May Monitoring Times refers to using a modification for down
converting, which allows you to hear the 800-900MHz frequencies in a
different range.

I hope this information has been helpful, if you have any questions
please contact us at {704}837-7081.

What gives, UBC9000XLT?
A friend of mine made a deal for the Belden 9913F cable with you for
55.00.
He said, " He would pay the shipping charges, C.O.D. charges, and the
$55.00 price for the cable when it arrived by U.P.S.
He also asked if you would E-mail him with the correct shipping amount+the
55.00
so he could have a bank money order ready for U.P.S. when it came.
You never sent the cable and all you were worried about was if he was
going to send you the shipping charges before you sent the merchandise.
Now either you have this merchandise or you don't.

I just want to know how many times you have sold this cable already, and
how many times some poor sucker has sent you the shipping money and the
cable never arrived.

Apparently you do not know how to conduct business.

Turn the unit off. Hold down Manual, 2, 9 and turn the unit back on.
This resets the microprocessor, IT ALSO CLEARS OUT ALL OF YOUR MEMORY
CHANNELS
AND SETS THE UNIT BACK TO THE TEST FREQUENCIES.

You can reset most Radio Shack units by turning them off, hold down 0,
Clear and turn the unit back on. THIS ALSO CLEARS ALL OF THE MEMORY
CHANNELS.

1236. The World According to Eric Oyen

Newsgroup: rec.radio.scanner
Date: 1997-05-14 00:00:00 UTC
From: VUBS79A@prodigy.com
Message-ID: <5ldc3k$4fa8@newssvr02-int.news.prodigy.com>
Source record: 197834

Eric,

With all due respect, you have got to be the most clueless individuals I have come across online.

Your lack of knowledge is laughable, especially considering how you seem to believe you're the ultimate authority on the workings of the Internet. You accuse individuals of conspiring against you and being connected with one another simply because their IDs happen to all end in 'aol.com' and because they share a common path. Well, of COURSE they do, you fool! If you had even a basic understanding of how AOL's system works, you'd realize that all postings made from their network originate from a common point!

Then there's the endless complaints about how others are treating you badly. Sending you unwanted e-mail, posting negative comments about you on these newsgroups, interfering with your CB and amateur radio transmissions. Eric, have you ever asked yourself why these people are engaging you in this manner? Might they possibly have a reason? Might you have caused undue attention to be drawn unto yourself? You must have done something to annoy or entice them. People don't just pick someone at random and start interfering with their communications. What's the rest of the story, Eric?

From the information you have provided us in your own postings, I have concluded that you're one of the losers of life's lottery. You're a sad little man who uses his "disability" as a crutch and as an excuse to keep from achieving anything meaningful in life. Instead of working to support yourself and get ahead in the world, you apparently sit at home all day in front of the computer and the radio. Maybe I'm wrong here; maybe you do have some small, meaningless job. But you sure seem to have a LOT of time on your hands to post your nonsense on here and involve yourself in numerous disputes locally on the CB and amateur bands.

Do yourself (and us) a favor. Get a life, Eric. As it stands right now, you are a pathetic embarrassment to both the online and the amateur radio communities. I believe I speak for the majority of the people on this newsgroup when I say that we're tired of your nonsense on here. Please, for your own good, find something more productive to do with your time and cease with your petty bickering. We don't care to hear it.

You are correct, I made an assumption. Most people that I have dealt =
with
over the years on here share what they collect from the group. You are =
correct
that the poster did not offer this.

>The original appender can
> bust his/her hump and collect and collate this information

> Enterprises jump with joy at this added income.

True, as I said I for some reason felt the poster was doing it
to share with the group. I myself dislike it when I post a request=20
for information and the answer is to buy something.

>=20
> And no, I am in no way affiliated either personally or

> the same light.

?????? Grove is OK by me and I don't recall saying they weren't. I
don't understand the purpose of any of what you said.

> As you can tell, it's late and I'm tired...not only physically
> but also of those who intend on spoiling our hobby with this
> pointless bickering and nonsensical ravings. A lot of good
> that does us who come here to share information and help
> each other.=20

That was my point, sharing. Telling somebody to go buy the information
they asked for rubbed me the wrong way. Wasn't meant personal and I
do appreciate what Bob Parnass has contributed to this group. I just
don't consider "go buy the info" as sharing but OTOH I would certainly
have to say it was helpful.

Sorry if I offended anyone.

Glenn

There is another list of hidden keys for BC-3000XLT on:

http://www.universe.digex.net/~bnr/tricks.html

Below I have taken the liberty to include an ascii version of this
document:

Regards
Per H . Nielsen

Per H. Nielsen Tel.: Int +45 42 84 50 11
Software Division Fax: Int +45 42 84 52 20
Dansk Data Elektronik A/S, Herlev, Denmark E-mail: phn@dde.dk
My Danish Scanner Pages: http://www.geocities.com/SiliconValley/9880

Uniden Bearcat BC3000XLT Undocumented Features and Tricks

These un-documented features may be activated by holding down the
appropriate keys while turning the scanner on. Confirmation messages
appear on the display for some functions, and are noted where applicable.

Key to
hold Result
down

LHT Toggles the display light timer from on to off (where the the
light stays on until you press the LHT button again to turn it
off manually). The display will read "ON light" or "OFF light".
DLY You can toggle between a 2 or 4 sec selectable delay. Display
will read "2 SEC" or "4 SEC".

AUTO This toggles AutoSorting off (ie scanning in order of freq,
rather than by channel number), but slows down the scan rate to
approx 50 cps. Display will read "ON sort" or "OFF sort".
ENTER This toggles the keypad beep on or off. Display will read "ON
beep" or "OFF beep".
Allows you to change direction of the Scan, so if you're
AutoSorting your scanner can scan up or down by freq; if you're
SCAN scanning by channel number, it'll go up or down by channel

number. The feature will be enabled when your scanner says "ON dir" and disabled when it says "OFF dir" . To change direction of the Scan, Hit SFT up-arrow or SFT down-arrow.
2,9 &
MANUAL This zeroes out and locks out all memory channels. ALL MEMORY CHANNELS WILL BE ERASED!

2,9 &
L/O You'll see all the display segments light up nice and slowly. Doesn't repeat endlessly like the BC220XLT though.

2,9 &
SCAN Test freqs are loaded into Ch 1-14 and 21-30.

2,9 & This will display the firmware revision. Either USA 0.09 or USA Keylock 0.20. Rev 0.09 allows AM mode above 760MHz in a Search (see below). The newer rev 0.20 doesn't.
HLD & This brings up a display of the shift register. You can use the LMT HLD/LMT (arrow) keys to move through locations 00 - FF. Hold either key to scroll.
MANUAL
This will skip the scrolling intro and go straight to scan mode.

Sft & 1
"Test 1"

Sft & 2
"Test 2"

Sft & 3
"Test 3"

Sft & 4
"Test 4"

Sft & 5
Toggles Battery Save On/Off

Sft & 6 Toggles user selection of Mode. With this OFF you cannot change mode from that selected automatically.
2, 9 &
DLY Turns off DELAY on all channels

Some images may be received from 1005.5-1018MHz. But remember, it is illegal to listen in on cellular phone conversations.

The scanner can be manually put into the Battery Save mode by toggling the DLY key off while the scanner sits in the Manual mode on a quiet freq for 45 seconds; power consumption drops to just 13 milliamps.

Revision USA 0.09 AM-mode search above 760MHz: The BC3000XLT doesn't allow direct entry of AM mode above 760MHz, but there's a workaround:

Start in the Manual mode.
Hit 25 LMT.
Open the squelch.
Hit SFT AM. (AM flashes.)
Now, punch in your Search limits.
Close the squelch and start your Search!

Use the SND feature to move a freq into a channel or bank. (If you don't use SND, the UHF freq will not be stored in the AM mode.)

Finally, when doing an Auto Search & Store with the BC3000XLT, the scanner will NOT store any freqs that are already programmed in the scanner's channels, whether or not the banks are selected, and no matter whether the channels are locked out or not.

Thanks to Mark Robinson for passing these along to me when I first started looking!!

And credit to Bob Parnass, who originally uncovered most of these little tricks.

If anyone knows of any more, please pass them along and I will include them here.

Comments or suggestions? E-mail Brian at bnr@universe.digex.net

FERassolian-sake. why didn't you post the real human-kind
answer to this poster? Why should we have to go throught a link
to your mind-stem cut shorter than your ability to look up to look
down?

Is it not the idea of the spirit of "giving" to add a chain to the
prior poster to the next viewer will have the answer minus your
"comments" enclosed.

This is not the property of your mind. Give you brain a rest and
stand up...let the pent=up thoughts exit odiferously.

Don't connect it to an "accessory" source. Wire it directly
to a the fuse block so it has input voltage at all times and
use the off-on switch to operate it.

Nick,
I guess I'm just lucky! I've been talking/e-mailing with
Ken Ascher at Communications Electronics Inc. This is the
place I buy all my Uniden gear at. I've been on their waiting
list since January. I had told him, like many others I am
sure, how much I HAD TO HAVE the BC235. I had already gotten
the manual from them via fax. Seems they got a first
production run of radios without manuals and Ken was kind
enough to call me and see if I would be interested in one!
They rest, as they say, is history. This radio is very
nice and watching all the talk-group activity is pretty cool
(in a dweeby-scannermaniac-kind-of-way ;-). I'm having a
blast and wonder just how much sleep I'll be getting tonight!
Happy monitoring! And thanks again Ken!

Strong signals,
Rich N2MCA http://www.qsl.net/n2mca/
North Carolina editor for The Scanner Club

Enigma Graphics
Scanning Services

Offering an affordable and convenient way to get your images and text "web ready"

Enigma can:
Scan your existing photos and brochures enhancing sharpness and color while optimizing them for the fastest Internet performance.

Use the latest OCR technology to convert your printed material into editable text files or return them to you in a variety of word processor formats.

What to send:
* Your photos to be scanned (up to 8 1/2 x 14)
* Self addressed stamped envelope (if you wish for your originals to be returned)
* Preference as to .JPG .GIF .TIFF .BMP .TGA .PSD .EPS
* Preference as to delivery method E mail, FTP of floppy disk
* Preference as to resolution 320x200 or 640x480
* Check or money order for $5.00 per image (or 5 images for $20.00)

Your images will be processed within 24 hours of reciept

Where to send:

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

Parts lists for recent models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. The service manual has an exploded parts diagram which is helpful in showing how to disassemble the scanner.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more

capable 500 mW speaker is available through Tandy as
replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory
bank, then scan only that bank, your PRO-43 will freeze up
and be placed into a catatonic state. Use the procedure
documented in the PRO-43 user manual to fully reset the
scanner. This will "break the trance," but all the memory
channels will be cleared.

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.

Note: Reprints of Monitoring Times articles are available | for $3.00 each from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive | any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity,

attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful

search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency

of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery

pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with | 300 channels in 10 banks. Can follow conversations on talk | groups and fleets in 800 MHz Motorola analog trunked | systems. Cannot scan or search in conventional or trunked | domains but not at the same time. Service search. | Excellent image rejection. Very fast scan and search rates. |

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby

SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. For a quantitative test report, see "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage

from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size.

Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the

847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to

radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner | using up conversion. Replaces PRO-62 and has many more | features. Selectable AM/NFM modes but fixed step sizes. 10 | search banks which can be cascaded. Auto store saves unique | frequencies found during a search. Frequencies can be | loaded using a computer but optional interface kit not yet | available. Can recharge Radio Shack's optional, monolithic |

NiCd pack, but not AA cells within the scanner. IFs are | 257.4, 21.4, and 0.455 MHz. |

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long

noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF	scans?	lock-outs?
FR104	6	X			no	
FR105	6	X			no	
FR2512	24	X			no	
FR2513	24	X			no	
FR2514	8	X			yes	no
FR2515	8	X			yes	no
FR2516	10	X			yes	yes
FR2517	10	X			yes	yes
FR2525	10	X			yes	yes
FR2526	10	X	X		yes	yes
FR2527	10	X	X		yes	yes
FR2528	10	X	X		yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For

more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz

"spectrum analyzer-like" display showing spectrum usage by
the transmitters in the map coverage area. Send check or
money order payable to Bob Parnass for $29.95 for standard
or $34.95 for deluxe RadioMap report with histogram.
Include your name, address, and telephone number, along with
center location (nearest intersection of 2 streets, or
latitude & longitude) and mail to: Bob Parnass, 2350 Douglas
Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central
time. For a brochure, send SASE.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal

required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the

two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder
connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier
activated relay inside the BC890XLT wore out. Andy found
the identical relay sold at Radio Shack (part #275-232) and
says the BC9000XLT uses the same relay, too.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?" This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores for under $13. Police Call Plus is

basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition | is available from Grove Enterprises for about $30. It is | crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns. *

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good

book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a

frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are

really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using

call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

I have a continuous coverage (.1-1300MHz) Icom IC-R1 that I would like
to sell or trade for:

Current Model Dual Band HT or Mobile
Pro-26 Scanner (easier to operate and read)
Shortwave Radio

- or make me an offer.

Includes owner's manual, service manual, BP-90 battery pack,
leatherette case, and wall charger

This radio would probably be a good "second" scanner. For me it is too
difficult to operate (tiny buttons and tiny characters on LCD.

I have an AOR 2500 and would like to find PC software to use with it. Does anyone have a suggestion? (Besides getting a new scanner!)

Names of shareware programs, or web site addresses would be very helpful. I've checked out lots of scanning links so far, but haven't found anything yet.

Thanks in advance.

activate
>only certain counties threatened by severe weather on an as needed basis
>mark.

Those aren't different tones -- the county listings and bulletin type are
digitally encoded with WR-SAME (Weather Radio - Selective Area Messaging.)
The tone is still 1050 but if you listen when they tone they also send out
a quick digital burst.

Check this site for basic information:

http://www.flanet.com/~ldbrewer/

The Veronica PLL is supposed to be easy to build, easy to maintain and can be boosted a good bit. A complete kit with antenna and stereo will set you back about 330 bucks.

Also check alt.radio.pirate for learned opinions on other transmitters.

I don't believe that's correct. Anyone can listen to the
Amateur bands. Radio Amateurs aren't permitted to use their
stations for profit or to aid an employers business. We
also aren't permitted to broadcast (transmissions intended
for non-hams). This doesn't restrict listeners, only the
content of the transmissions.

:902-928 MHz is used on a shared basis by local hams, part 15 devices
:(like digital cordless phones) and some low power FM video links.
:903-905 is the base frequency range for at&t digital phones (part 15),
:the handset uses 925-927 MHZ.

Digital cordless phones (CT-2) are on 861 to 865 Mhz.

>Gee... I guess that means no one will monitor them, then? ;-)

what would be more interesting is to see how the Freedom of Information Act is re-valuated and the subtraction of certain words from the body ... a very usual tactic of peope in power afraid to be heard...

What will happen to the publisher of this info? Will they be put in the same bedroom as CHILD PORNOGRAPHER"S?

Now that we don't have Russia to kick around anymore all those people employed then are now concentrating on the citizens of the USA who want to know more....

the govt., under the helpful absence of bill clinton, is turning to taking our privacy away...bit by bit, freq. by freq., video by video, picture by picture and then we become what occurred in Fahrenheit 451....

bill conduit
etc.

look at how many laws were ok'd into law by the pres who did not try to override any legislation that takes away liberties from the people who elected him. note how him/her don't want people to know the story about whitewater and why a senator killed himself and why illegal contributions were "unknown" by someone who is as smart and in control as he is....

he just does a Jimmy Carter and smiles his accusers away.....

We are a dealer (http://www.advdig.com).

All of you are correct. There are two versions. The only difference in them is that the U.S. Version is cellular blocked. The block is done in the CPU itself and is NOT modifiable w/out a different CPU - which can likely be ordered

I am requesting information on how you can monitor transmissions from
M.D.T.'s (Mobile Data Terminals) and the type of equpment and setup
necessary
to accomplish this. Any information would be greatly appreciated.

Thank you.

Hello fellow scanner-heads,
Well the wait for me is finally over! I got my BC235XLT
TrunkTracker this afternoon! Hot damn! I'm just slightly
excited.
Anyways, I hope to have some first impressions about it
posted on my web site either tonite or tomorrow sometime.
Shortly after that I hope to have the full review!
Happy monitoring all! I know I will be! ;-)

Strong signals,
Rich N2MCA http://www.qsl.net/n2mca/

To quote another...."BZZZZZ...wrong".....Although everything is
discounted drastically when it's being discontinued, this radio sold for
just above $180 when it was new. I own one, and I've had good luck with it
for the last 8 years or so...

I will agree though, that it is past it's $$ prime.....for $180 a lot
better scanner can be had.....
Not an Amateur Radio Operator.....and PROUD of it!!!

1315. Info: Obtaining Frequency Info; Amazing Things Do Happen !

Newsgroup: rec.radio.scanner
Date: 1997-05-15 00:00:00 UTC
From: eagle28NO@iS.netPcomA.comM
Message-ID: <337a5391.1754688@nntp.ix.netcom.com>
Source record: 197767

Hello all,
Just a short (long?) note to let everyone know of an amazing thing
that occured in my quest for frequencies.
I live in Oxnard California (soon Twentynine Palms, CA) and noticed
that the Ventura County fire department had changed their channel
assignments. The frequencies were still the same but with different
channel numbers. I searched and searched but could not come up with a
new listing anywhere.
So, as a last resort I located the web page for the Ventura County
Fire Department and copied down some e-mail addresses. I sent some
e-mail praising their efforts as public servents and asked for the
current frequency plan. Lo and behold within 24 hours I received a
reply with the current listing attached. Not a watered down file, the
full thing. I was amazed. I never thought at first to just ask for
it.
Something that is not done enough is letting them know you
apreciate what they are doing. Think about it, would'nt and do'nt you
like a little praise now and then for your efforts?
I did not go at this to "butter them up" just to get what I wanted.
I think we all need to take the time every now and then to thank our
fire and police and all other public servents for the outstanding job
their doing.

Yes, amazing things do happen.

Best Reguards to all,
Jerry

The NWS in some states is going to several selectable tones. Instead of one tone activating all weather radios and waking everyone up it will activate only certain counties threatened by severe weather on an as needed basis mark.

Steve S <schlemba@ix.netcom.com> wrote in article
<5l8aob$jtt@sjx-ixn4.ix.netcom.com>...
BE VERY CAREFUL. I was experimenting with different tones on my "wideband" VHF HT and I set off the old Civil Defense siren down the street (now used for severe weather). It took over 30 minutes for the city (?) to turn it off. My scanner indicated the police dispatcher was flooded with 911 calls. (OOOOps)

Assuming you decoder decodes 300,1200 and 2400 POCSAG (reason for only partial reception if it does not do all three bauds) I would guess that the problem is signal strength. Even when running $10,000.00 commercial pager interceptors we use a good outside antenna or at least hang a discone inside from the ceiling. It makes a differance.
Mark

James D. Cronin <jdc@cci.com> wrote in article
<E9tJnz.HFE@sunsrvr6.cci.com>...

I tried all the free POCSAG pager decoders. The best results were with "poc32." Look for the zip file poc32eng.zip.

Poc32 can decode pager tones from a sound card and/or a Hamcomm op-amp interface. Multiple pager signals can be decoded, but you need more than one radio. It can also generate pager signals when hooked up to a transmitter. All in all a good piece of software.

Message-ID: <19970515061101.CAA21119@ladder02.news.aol.com>
Source record: 197770

I hope this helps!!!!

Cordless Telephone Frequencies

--

46MHz Cordless Phone Frequencies

Channel Base Handset

1 43.720 48.760

2 43.740 48.840

3 43.820 48.860

4 43.840 48.920

5 43.920 49.000

6 43.960 49.080

7 44.120 49.100

8 44.160 49.160

9 44.180 49.200

10 44.200 49.240

11 44.320 49.280

12 44.360 49.360

13 44.400 49.400

14 44.460 49.480

15 44.480 49.500

16 46.610 49.670

17 (B) 46.630 49.845

18 (C) 46.670 49.860

19 46.710 49.770

20 (D) 46.730 49.875

21 (A) 46.770 49.830

22 (E) 46.830 49.890

23 46.870 49.930

24 46.930 49.990

25 46.970 49.970

Chs A - E handset frequencies are also used for baby room monitors and low power handie-talkies.
The F.C.C. has designated the 43/44MHz frequencies for cordless phones to relieve the overcrowded 46-mhz band. (Apparently the 900-mhz phones are not
catching on because of the increased expense).

900 MHz Cordless Phones

Panasonic KX-T9000 base 902.100-903.870 60 channels
handset 926.100-927.870 30 kHz spacing

VTech Tropez 900DX base 905.600-907.500 20 channels (digital)
handset 925.500-927.400 100 kHz spacing

AT&T #9120 902.0-905.0
925.0-928.0

OTRON CORP. #CP-1000 902.1-903.9 unconfirmed
926.1-927.9

SAMSUNG #SP-R912 903.0
927.0

Note: It is a violation of federal law to listen to cordless phone conversations.

Try Ramsey Electronics. They have a couple of models or
consider finding a Motorola Minitor Pager and re-freq it
to baby monitor channel. Then take audio from scanner and
feed into a baby monitor transmitter.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair service for the Plectron P1 and R700 models is
offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal
Signal in University Park, IL, phone (800)524-3021. You
can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone
(800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)

FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies. It's clear from the discussions posted on the Internet that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a

diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046,

allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the | discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable | work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The new RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000

channel PRO-2035, which was replaced by the PRO-2042. The | portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ | wider deviation and a 150 Hz CTCSS tone, not supported by | most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are

unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer

than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but

carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each | from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee. |

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain selected business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 | page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national

scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities,

highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

- 2 -

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 , Bearcat BC-101 , and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to

specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

G & G Communications
9247 Glenwood Drive
LeRoy, NY 14482.
tel. 716-768-8151

Jan Crystals
Box #-6017
Fort Myers, FL 33911
tel. 813-936-2397

Monitor Crystal Svc
124 W Walnut St Watseka, IL 60970
tel. 815-432-5296

Short product summaries for over 70 scanner models appear in a separate article, entitled "Scanner Radio Review Briefs." For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have a pro26 & a pro2006 for sale. The pro26 is less then a year old. It is in brand new condition. I have a leather case for it. Also a set of four RS High Capacity ni cad rechargeable AA batteries for it. Box and manual. Asking $350.00.

Also for sale is a two year old pro2006. It is in mint condition. I have the box and manual for it also. Asking $400.00. If interested please send e mail to stu@harborcom.net

1336. Unidentified Signal, Detroit Area

Newsgroup: rec.radio.scanner
Date: 1997-05-16 00:00:00 UTC
From: jsmeed@aol.com
Message-ID: <19970517020100.WAA15435@ladder02.news.aol.com>
Source record: 197538

I live in the Detroit area, Oakland County to be more specific, and I seem to pick up what I would describe as a "Morse code" type signal, for lack of a better description. A series of dots and dashes that seems to wash in the 154-155 Mhz range. It seems to be a fairly regular signal that appears every 5 minutes or so and it seems similar to the signal that the Advanced Life Support units use to contact hospitals on the Oakland County Trunk System. I'm using a Bearcat SC150B.

Can anyone tell me what this is???

Thanks,.....Jeff S., Rochester, Mi.

1338. US AR8000 status, can I still buy?

Newsgroup: rec.radio.scanner
Date: 1997-05-16 00:00:00 UTC
From: sdkuo@vela.acs.oakland.edu
Message-ID: <5lj4ct$j2q@vela.acs.oakland.edu>
Source record: 197540

What is the status of the AR8000 in the US? My PRO-43 just died, so I'm looking to buy a AR8000. I've heard something about the FCC halting AR8000 sales (in US) due to easy cell mod. Could someone elaborate on this issue. Are new "old style" AR8000s still for sale? Anyone tried importing their own from Canada?

thanks,

Steve

Ron,

The Radio Shack catalog # is 20-308A. Maybe you can order one from
R.S. I have a PRO-51 scanner & manual. E-mail your questions, I'll
try to answer them.

P.S. what did you pay for your PRO-51?

i was readin in the current issue of pop mechanics about some new cell tech, i know it is going digital, which pretty much means any scanners are screwed correct....but i also saw some mention of a 1900mhz freq, but i am sure it would be digital...so there is no way to bypass the digital signal correct? we just get garbage...

Hold down the 2+9+locout keys while turning the scanner on. This will clear
all programmed memory and put test freqs. in the first 3 banks, on channel 23
the freq. should be 888.960 in the middle of the blocked out cellular band.
you can do a direct search within the band and store any active freqs. found
in the monitor mem. Then transfer them to permanent channels using the regular
procedure described in the manual. You can't get back into the blocked
cellular band unless you do a direct search from within it.

Doug, Two years ago we took the World Explorers cruise for VC to Seward and back over a 14 day period. I took a two meter Ht which can scan from 100 mhz up to 180 mhz. I picked very little and made no QSO's until coming back south to the islands just north of V/C. I programmed most of the repeaters in southern Alaska. No one wanted to respond. While I am certain there is traffic in that area, there wasn't much for me. I am more of a ham than a scanner person. In use was an HT with out put of five watts into a Diamond whip - no rubber duck!. Here's hoping you have better luck than I.

I've noticed agreat many digital mode decoders(i.e. Hamcomm and
Jvfax) on the web for use in conjuntion with a decoder box of some sort.
(Most indicate that building this box is easy..)
But I was wondering if anyone had success in using the Optolinx in
this function? If so how...
Tks...

Their slogan does have to go. I went into to a Radio Shack in 1 of our malls & was looking at the 2 meter mobile & asked one of the sales people
if the radio could be modified to pick up M.A.R.S. & he gave me this look like I meant the planet & told me he didn't know. The guy must have thought I was lost in the head.

I use a Ramsey FM25a digital tunned unit. It works very well. It puts
out about 25 Milliwatts. Into a good antenna that'll give you about 2
or 3 blocks of range. Cost $130 you build. Also you can add the LPA-1
and get a 1 watt output. But, that might get attention you dont want!

I just got both radios and the 8000, was new from Cal. I got lucky
the dealer only had 3 left. I like both radios and I would not want
to part with either. I find good in both, but if I had to pick only
one I guess it would be the 8000. I know by hooking them both up to
my pc via a Optolinx is a BLAST!

>Need procedure for replacing the Ram backup battery in the Icom R-7000
>without loosing the ram program.

Be very careful and solder the new one in (or clip in very carefully)
before removing the old one.

The backup cells are cheap enough so you can buy two and use one to
hold the memory while soldering in the permanent one. You don't have
to use a lithium; you can use any 3VDC battery source.

The diode lead (see schematic) sometimes is easiest place to hang the
positive lead of the interim battery. Negative goes to ground.

Or you could charge up a decent sized electrolytic to 3 volts off some
batteries, tack it in with a tiny piece of wire, then swap out the
lithium coin cell. Should hold plenty long enough to get the new cell
in. Have all tools ready and iron hot before you clip out the old one.

The idea of all of this is to keep some sort of 3 volts on the backup
line while replacing the primary cell.

We don't have it, but I know some of the shops have Delta or similar
software that will read the radio into a computer, then restore
everything later.

If you want to be proactive for a few years down the road, you can
install an external battery holder inside the radio to hold 3 volts
worth of AAA or AA alkaline cells. Put an electrolytic permanently
across the battery holder, then just pop in new batteries every few
years as a precaution. Cheap. But of course if you do this the radio
will not be original, if you care.

Hope this helps ..... Steve

Hello.

I would like to know more information about scanner laws in Canada.

I have heard:

- No scanners are allowed in the vehicle at Manitoba

Is this correct ? If so, how about ham radio operators ? are they
allowed to install ham radio equipment that has the ability to receive
police bands ?

I would like to know about other provinces' situations as well.
In BC, we can install a scannerin the vehicle lawfully as far as I
know.

Thanks.

Source record: 197657

I have a North American version of the RS Pro-60.

I have noticed that the CPU doesn't seem to have the following pins connected to anything:

14, 15, 16, 29, 32, 37, 41, 48, 49, 57, 60, 65, 67, 68, and 64 maybe.

Could connecting any of these pins to Vcc or Ground restore the cellular bands?

I would be interested to hear what the unconnected pins are for the European version of the scanner.

1367. Spy people on the Net

I present here my two most recent software which I hope they interest you.
they are progammed by Turbo C++ and run under Windows(3.11 and 95).
here is a short description of these two software.

1-Robot Spy 1.0
at my knowledge, this software is the first and the unique of its kind.
This software allow you to spy your friends who are on the net at the same time
of you, it permits to see exactly what they do on their screen, pixel by pixel,
anywhere, in the world, at the condition they are connected to the internet.
how does-it work?
it's simple, you send a file to the person you want to spy telling to him it's a
game or everythings else, the objectif is this person run the file. from this time,
a batch file is installed on his computor, and everytime this person use internet,
this batch connects him secretly on our server.
on your side, you , after the installation of the other part of the software every time
you want, you can connect on our server with your password and have the list of all the
persons who received your batch and who are connected at this time.
the only thing you have to do is to click on the name of the person you want to spy.
a window opens containing exactly the screen of the person spied, you can have
ten pictures per second with 256 colors, if you switch to balck and white mode you can
onbtain a real time sequence, approximatly 30 pictures by second.

Robot Mailer 1.1
The message you are reading presently is sent to more then 20,000 newsgroups with
this software. This program automates FreeAgent, and reach with a connection of 28,8 Kbauds
5,000 news per hours. It can also find a maximum of 50,000 e-mail adresses from internet
and
send a message in 4 or 5 hours. You can obtain with this sofware the most powerful tool of
mass transmittion on the internet.

Robot Spy 1.0.................20 US$
Robot Mailer 1.1.............20 US$
Both.............................30 US$

I'm sorry i can't accept credit card, but you can send an international money order to:

Ben Hedi Nassef
1481 Ste-Catherine est #7
Montreal, PQ, H2L-2H9
Canada

Don't forget to include your e-mail on a paper, you receice the software ordered in your
e-mail the day we receive the money order.

The Andrews AFB Air Show is free, you can take scanners, and the sked
is listed at the Andrews AFB Home page

Here are some possible freqs...(that I will be using too..)
U.S. Air Force Thunderbirds

66.90
114.950
120.450 Operations/coordinations
123.400 Common airshow
123.540 Airshow control
124.925 Air-to-air
138.875
140.000 Air-to-air tactical
140.400 Air-to-air tactical
141.850 Air-to-air/coordination (primary)
143.850 Air-to-air (primary)
148.000 (AM)
148.550 Maintenance

236.550 Air-to-air solos (5-6)
236.600 Air-to-air
241.400 Air-to-air solos (5-6)
250.850 Team leader command
273.500 Air-to-air solos (5-6)
283.500 Air-to-air solos (5-6)
294.700 Air-to-air
295.700
322.300 Air-to-air
322.600 Air-to-air
382.900 Air-to-air tactical
394.000 Air-to-air tactical
413.025 Ground support
413.075 Ground support
413.100 Ground support
413.150 Ground support
413.275 Ground support
413.350 Ground support
413.400 Ground support
Here are recieving frequencies for Various airshow teams. Date verifies
last time I heard that frequency used:

U. S. Air Force Golden Knights (Parachute Team)
032.400 (Operations)
042.350 (Primary)

Common civilian airshow tower and show control frequencies:
120.000, 123.400, 123.450, 123.750, 126.200, 126.400, 126.250, 128.250
349.400, (USAF Military towers)
340.200, (Military air tower Pensacola NAS 11/11/92)
122.745 Airshow Airboss (Show control) at Symnra, TN 9/18/93

Budlight Microjet
123.470 Confirmed Symnra, TN 9/18/93

112.680, 121.770, 122.690, 122.700, (Courtland, AL Airshow 11/05/92)
118.150 (Maxwell AFB tower,Montgomery, AL)
119.900 (BHM tower,Birmingham, AL)
124.500, 132.000 (Approach, Birmingham, AL)
377.150 (Alabama ANG tower,Birmingham, AL)

Modes on most frequencies are AM.

Thanks to airshow/scanner fanactics all over the world!
Please send corrections and updates to:

I sure hope they allow scanners on base! I'm taking mine!
Does anyone know

how much it costs to get in?

tyler

tyler@cyberia.com

The Andrews AFB Air Show is free, you can take scanners, and the
sked is listed at the Andrews
AFB Home page

Here are some possible freqs...(that I will be using too..)

U.S. Air Force Thunderbirds

66.90

114.950

120.450 Operations/coordinations

123.400 Common airshow

123.540 Airshow control

124.925 Air-to-air

138.875

140.000 Air-to-air tactical

140.400 Air-to-air tactical

141.850 Air-to-air/coordination (primary)

143.850 Air-to-air (primary)

148.000 (AM)

148.550 Maintenance

236.550 Air-to-air solos (5-6)

236.600 Air-to-air

241.400 Air-to-air solos (5-6)

250.850 Team leader command

273.500 Air-to-air solos (5-6)

283.500 Air-to-air solos (5-6)

294.700 Air-to-air

295.700

322.300 Air-to-air

322.600 Air-to-air

382.900 Air-to-air tactical

394.000 Air-to-air tactical

413.025 Ground support

413.075 Ground support

413.100 Ground support

413.150 Ground support

413.275 Ground support

413.350 Ground support

413.400 Ground support

Here are recieving frequencies for Various airshow teams. Date verifies
last time I heard that frequency used:

U. S. Air Force Golden Knights (Parachute Team)

032.400 (Operations)

042.350 (Primary)

Common civilian airshow tower and show control frequencies:

120.000, 123.400, 123.450, 123.750, 126.200, 126.400, 126.250, 128.250

349.400, (USAF Military towers)

340.200, (Military air tower Pensacola NAS 11/11/92)

122.745 Airshow Airboss (Show control) at Symnra,
TN 9/18/93

Budlight Microjet

123.470 Confirmed Symnra, TN 9/18/93

112.680, 121.770, 122.690, 122.700, (Courtland, AL Airshow 11/05/92)

118.150 (Maxwell AFB tower,Montgomery, AL)

119.900 (BHM tower,Birmingham, AL)

124.500, 132.000 (Approach, Birmingham, AL)

377.150 (Alabama ANG tower,Birmingham, AL)

Modes on most frequencies are AM.

Thanks to airshow/scanner fanactics all over the world!

Please send corrections and updates to:

Grove Enterprises sells reprints for $3.00 each with a s.a.s.e. We have all the mods on the BC200Xlt. Also, Bill Cheek's Ultimate Scanner Handbook and Scanner Modification Handbook Volume 2 cover the mods for the BC200 XLT as well as other radios.

THe unit you have was manufactured in March 1996, so the keypad mod will not work. You can, however pick up images by searching from 900-918Mhz.

I hope this information has been helpful, if you have any questions please contact us at {704}837-7081.

I want to buy a scanner. Use for emergency broadcasts, military, and sports.
Which one to buy. I heard to wait for the new Uniden 235xlt. Private answers appreciated.

>Bob James
>Fairport,NY

Both Office Max and Circuit City tell me the model has been recalled due to problems, no date for reissue, though Lucent (who now owns that part of AT&T) still features it on their web site www.lucent.com under "consumer products/cordless phones/900 MHz.

F O R S A L E

MOTOROLA MTX9000 fm handi-talkie radio,
model H01WCF4DB5AN NX type WCMA.
900mHz range. With charger and info.
Only $699.

COCA-COLA caps. Red cloth, white lettering. New.
$8 each + shipping. Only 10 available.

..... FOR YOUR DRIVING PLEASURE .....
1929 Mercedes SSK kitcar on VW chassis. Just completed, never titled.
Yellow, with brown fenders and running board, tan convertible top, side
curtains, and tonneau cover. Gold trim instruments.

COBRA 18-ULTRA CB ---- 40 channel, pushbutton tuning, with 3
NOAA weather channels. Includes microphone, but no mounting
hardware. $ 39.

LEXMARK/IBM PORTABLE PRINTER 5183 ---- powered by rechargable
battery or AC wall adaptor (included), this printer is only
11.5" x 3.5" x 2", and weighs about 2.5 pounds with battery
in place. Using silent thermal print head, it will print on
either thermal fax paper or on regular paper using the enclosed
thermal transfer ribbons. Very quiet in operation, and because
it runs on a battery, it is completely portable, for use with
laptop computers anywhere. Includes parallel port cable. $89.
.
ANADEX WORD-SCRIBE PRINTER ---- heavy duty dot matrix printer.
Multiple ports, but no literature so only parallel port in use
now. Tractor or friction feed. Fast, good quality; 17-inch
platten. $ 15
.
add shipping to all prices.
if interested, leave e-mail...

I use the unit from a Philips wireless stereo headphone outfit. The
headphone is an FM broadcast receiver and the sender can be tuned in.

Comes with mono and stereo connector leads so yu have sound on both
sides if you want.
Of course, being a broadcast band sender you can receive on any FM
radio. I sometimes take advantage of the high external antenna on my
base station scanner and listen from the patio on one of my handhelds.

I'm sorry, sir, but your information is in error. Type acceptance is not
required for radios used on bands controlled by the National
Telecommunications and Information Administration (NTIA). I know this because
in addition to being a ham, having a GROL, etc., I am a user of several
NTIA-controlled bands, where modified ham radio usage is permitted. In fact,
tommorow I'm going to be at Sheboygan, Wisconsin legally transmitting on
non-ham frequencies with a modified Kenwood TH-78A, and my doing so will not
violate any regulations nor violate any laws.

Source record: 197567
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Somehow, I have "zapped" my Pro-2006. It was working fine. I am thinking that I may have either connected or disconnected an external antenna when the radio was powered (dumb). I was also "poking around" for the external speaker jack.

My problem is now: Radio has no sensitivity. It will not pick up anything. It appears to be scanning, but will not stop on any frequencies. The squelch appears to work, as the radio will stop when the squelch knob is rotated, however, only static is heard.

I would appreciate any help.

Thank you.

From: adavydov1@aol.com
Message-ID: <19970517165600.MAA06926@ladder02.news.aol.com>
Source record: 197574

Hi,

I recently atteneded a hamfest and bought a Tempo S1 2 meter HT for $10. The unit came with the battery, leather case, and manual. The very first time I opened it up, I gave the unit 9.5 volts of power from the power supply, and it worked. But then a wire ripped off, so I soldered it back to where I thought it would go. I charged the NiCad battery, and closed up the unit. When I went to turn it on, I found that the unit won't transmit, the TX LED lights up but no RF power is emmited. Then I tuned the radio to a local repeater which was in use at the time, and all I heard was the rushing static. Can someone possibly point me in the right direction? I thought I might have accidentaly grounded the antenna wire, but I went though it all again and still no diffrence. If anyone has any ideas at all on this, please e-mail me, since I have very poor access to the newsgroups (I have AOL.) Also any info on the Tempo S1 HT is also very welcome.

Thanks in advance,
ADavydov1@aol.com

In addition to Ramsey's kits, you might look into the plans and available kit that is talked about in the June 1997 edition of Electronics Now magazine. I quickly read through it and it hinted at the fact that you could do some simple changes and get 150W out of the transmitter. Its in stereo so you could have a CD playing over it or you can have two scanners set up monitoring different ranges and be able to control outside listening with the balance control.

Wiggie

I get Mcdonalds on 154.570 here in northern Minnesota. I hear both sides of the conversation between the worker and the vehicle and I also pick up any inside (headset to headset) conversation. I usually have fun with this one. Sometimes when I'm in line waiting and I can see the girl talking and listening on the scanner to what she is saying, I'll pull up and make some comment on what she said. When she asks how I know, I tell her I read her lips and that I've been doing it for years. They usually get a kick out of that. :)

Very likely it is a repeater signing itself. Amateur repeaters do it
about every ten minutes by FCC reg..

Don't you dare spend $900 if you just want to listen to the local stuff. This might tick off a lot of people here, BUT... There is no real "need" to spend more than $200. What you need to do is find the frequencies of the stuff you want to listen to...go to the store (or better yet get it used) and get the cheapest programmable scanner you can find that covers the bands you want to hear. Sure, you could spen hundreds more and get computer interfaced equipment that will log all the stuff picked up even when you're not home, but WHY? Unless you're a serious hobbiest that really wants it, there's not much of a reason...IN MY OPINION!

As far as cordless phones, yes...most scanners will pick up the common ones that operate in the 46mhz area. If you spend more money you can get a rig that will pick up the 900mhz phones too, but most people who spend that much money on a phone will drop a few bucks more and get digital encryption.

Cellular? Kind of hard to find a new radio to pick those up. Well, that's not exactly true, but the ones that still do will just get you in the area and you'll have to use a "direct" button to go through the right freqs, then hit it again to go back.

If you REALLY want the cellular, I would suggest finding a PRO 43 (handheld) or a PRO 2006 (base) that's already been converted. These will run you between $250 and $350 in the box....BUT they're no longer available in most local stores. If cellular is NOT that big of a deal then see paragraph 01.

Legality? Well, I'm sure I will get corrected on this, but LAST I knew it was illegal to INTENTIONALLY intercept telephone calls from any type of phone. Used to be it was legal as long as you didn't release the info you heard to anybody else. Check with somebody from GROVE on that issue. They're always right on top of the issue.

Good luck and don't get talked into a $1000 purchase if you just want to hear the stuff.

Poser

remove the SPAMFREE from the address above if you want to e-mail me on the issue, argue with me on the issue, or just send death threats.

Military aircraft commonly use frequencies in the 137 to 150 mHz range, AM mode, for air-to-air and sometimes air-to-ground comms. It is normal for them!

Anyone interested in monitoring military communications should join MilCom, the military monitoring listserver. To join, send an email message to:

majordomo@grove.net

Leave the subject line blank, or just: milcom

In the text area type only: subscribe milcom

That's all there is to it. Of course, there is no charge to join.

Pro 43 priority programming --- To program a channel as the priority channel, press (in sequence) PGM, the desired channel number, and PRI. P appears in the upper left corner of the display whenever the scanner is set to the priority channel. You can only select one channel as the priority channel. To turn off the priority feature, press PRI again so that PRI disappears from the display.

For that price it's a good deal. And you'll always have the
option of adding some hardware to connect it to a computer to
control via software.

Snap it up quick! Good luck!

Message-ID: <337f6ccc.2543280@netnews.worldnet.att.net>
Source record: 197491

Has anyone tried one of the broadband pre-amps on
one of the RS Discones? If so, did you try it out both at
the antenna and at the receiver. I have my Discone in
the attic...I'm near a large metro area and some of
the transmitters are just a bit too far and I was wondering
if this new low-noise pre-amps might boost everything
so I can get something closer to full quieting on the
transmitters....I realize that the hand held xmitters will
always cause noisy sounding signals to the main
receiver/xmitter. I'm just trying to get more signal
strength to my scanner.

I am particularly interested in the difference in locating
the pre-amp at the antenna versus at the back of the
receiver. I'm using a RS Pro-2035...with the better
RG-8 coax. I think it is Grove that has these new
pre-amps available for around 59.95...supposed to
contain a new high output-low noise chip by NEC.

Leonard...

>http://www.airnav.com). The list is

<list snipped>

>Would some kind soul please lanswer the following:
>(1) What is the UNICOM frequency used for?

UNICOM is used by pilots to coordinate ground servicing with a Fixed Base Operator (FBO). At smaller, uncontrolled airports UNICOM is also used as a traffic advisory freq.

>(2) What is Clearance Delivery?

The frequency that is used to obtain airways clearance from ATC prior to departure.

>(3) What does Class B refer to? (different aircraft types perhaps???)

Class B airspace. New designation for Terminal Control Area (TCA). This freq. is used for aircraft that need clearance to transition the Class B airspace.

>(4) What is the PTC frequency?

No clue. 125.05 is clearance delivery and occasionally PDC (Pre Departure Clearance) aircraft call this freq. for "release times" to the major terminals... Maybe that's what they're thinking.

>(5) What is the difference is between 'ramp control' and 'ground'?

Ramp Control is staffed by airline or FBO employees and controls movement on their respective ramps. Ground control are the FAA employees in the Tower responsible for controlling movements on the taxiways.

>(6) Why are there multiple tower frequencies? (backup perhaps?)

Bingo. 257.8 is UHF for military aircraft.

>(7) What is the difference between all the listed approach frequencies?
> (the departure frequencies are dependant on runway direction but
> the approach freqs don't have this designation...)

AFAIK the departure freqs. aren't dependent upon runway direction but YMMV. The 360.6 freq. is for Military, 124.0 is for Hopkins arrivals, 123.85 is the "Final" approach controller for Hopkins (during peak traffic hours) and 126.55 is Approach control for low altitude arrivals and arrivals to other airports in the area.

2 Questions -

(1) I'd prefer a desk/counter top model. Not a handheld. Any word on
that?
(2) how much does this puppy cost?

Thanks.

Hello
I am trying to find out about mobile data terminals. Specifically what components make up the unit. I am also interested in the physical sizes of each of the components. I have had no luck requesting this information from companies who make mobile data terminals though need the information as a research study into communication of couriers.

Please feel free to mail me

I've been experimenting with 'trunker' and can summarize here what I've
seen.
I'm curious if anyone can help with a few questions:

1) the 'idle stream' of data consists of the following three commands,
whenever
nothing else needs to be sent:

Data Group/Individual Command (hex)
308F G 03c0
1F3E I 032B // 1f3e is the system id?
5000 G 03C0

none of the entries in this set correspond to a known group id, radio id,
or
usable frequency number

2) every so often, the following series comes across:

Data G/I Command
1f3e G 0308 // more to follow, data == systemid
2936 G 030b // note after seeing next word that the
data part of this
// word is 0x2800 + the frequency value from the next
command
1ffe G 0136 // assign data channel to frequency
136(hex)

3) even less frequently from #2, the following single command comes
through:

Data G/I Command
0b19 I 02f8 // neither numbers are group, id, or
freq for this system...

If anyone is more informed about this, I'd love to learn...

Neal Fildes

Is it true if a Rat Shack amplified external speaker is mounted behind the grill of an automobile you can have fun at McDonalds? I have heard that some people go to the drive through and blast other peoples orders all over the parking lot using this technique. This allegedly infuriates the manager and the person ordering the food!
Has anybody ever heard of anybody doing this with success? What are the mcDonalds freqs? Is this a viable use for a mobile scanner?

From: jsk@alpha1.csd.uwm.edu
Message-ID: <5lm4si$ffe@uwm.edu>
Source record: 197608

Hello Fellow Scannerists:

I have been using an RS Discone for about the last six years here in southern wisconsin- it sure takes a beating with the changes in the climate.

While performing my annual antenna maintenance, I noticed the black plastic insulator between the radials and the "disc" part has cracked and is now just delicately held inplace by wishful thinking.

I suspect UV rays to have degraded the plastic and the weather to have taken it's toll. Otherwise, it is in excellent condition.

I have called Tandy parts to see if that plastic insulator part is available, and after several tries at explaining what I needed, I guess I'm out of luck.

Has anyone else who owns an RD discone run across the same problem? What have yo done to fix it? I am considering making a mold of what is left, using an epoxy resin and then trying to shape the threads with a small file.

Any thoughts?

Thanks,

.Jeff.

The Fire Dept pagers in our county (and most counties I guess) Uses 2 tones Broadcasted on our freq, If "our pagers " hear "our tones " The pagers produce an alert tone and the Squelch is open, hence "I hear all of the county" until a reset button is pressed. It would be helpful If a scanner was made or an option board made that would listen for these tones and sound an alert tone if Our station got a Call.

If anyone Knows of a product that would "trip my scanner " the way my pager is tripped please E-mail me
thanks,
Don

FT-50R is a great HT. It is loud, sensitive and is one of the very few amateur radios on the market with DCS. And one can't beat the price. I hardly carry my MT2000 anymore and carry this radio.

Way to go Yaesu !!!

I agree with you 95% Poser but if the guy wants military air craft
because he lives near an Air, Armym or Naval Base he will need to spend
between 300 and 400 (low end) for a new scanner than can get frequencies
between 225 and 400 and switch between modes (AM {Aircraft}, FM {police
fire etc}, WFM {TV, FM Radio, Some Military}).

stuartm@idirect.com (Johnnie B. Good) wrote:

:
:After owning this scanner for 8 months, I finally got around to try
:recording with it. Trouble is the manual isn't very precise about
:this, so I experimented and here's what I found:
:
:The "line out" jack on the front of the scanner is an internally
:attenuated signal that can go directly into the "MIC" or "AUX" jack on
:the tape recorder using a straight patch cord. The signal strength of
:this output is controlled by the scanner volume control. This means
:when I use this jack to record I can't record without having the
:scanner speaker on also. (I suppose I could insert a dummy plug into
:the "Ext Speaker" jack silence the scanner speaker, but I,m not sure
:this is OK for the scanner speaker circuit - comments?)

If the dummy plug has a resistor of the same value as the speaker
impedance there should be no problem. Just putting a plug in with
nothing connected would probably be OK too. I wouldn't suggest using
a shorting plug.

:If I use an "Shielded Attenuating Audio Cable" (RS #42-2152A) plugged
:into the "Ext Speaker" jack on the front of the scanner and into the
:"MIC" jack on the tape recorder, the volume control still controls the
:record level but the scanner speaker is off - "silent recording."

The effect on the scanner would be the same as an unconnected plug.
You will probably get more noise using the speaker connection.

:The RCA jack on the back of the scanner is a switch circuit that will
:cycle the "Record" mode on the tape recorder when connected to its
:"REMOTE" jack. I had to make the cable for this, wasn't available at
:RS.

If you don't want to make a cable you could probably use a ready made
cable with an adapter.

:This switch closes each time a channel that is programmed to
:RECORD comes active. The two output jacks on the front of the scanner
:are always active, you can record from these any time..
:

Denny Schmidt <jschmidt@uslink.net> wrote:

>Sounds like you static zapped the first stage of the RF amp which is
>usually a mosfet device. This is a fairly common problem. Good Luck

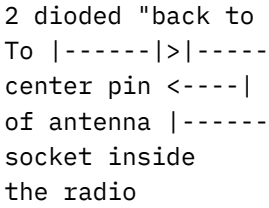
That's a real helpful answer!

The guy should be advised to return the radio to a repair shop - or find a friendly radio ham who is willing to help fix it (Circuit info will be needed.)

However, as a precaution against some (not all) of the higher voltages to get into the antenna, a pair of low power signal diode soldered "back-to-back" will allow the very low level RF signals through to the radio but will shunt higher voltages to ground

The diodes should be connected to the centre pin of the antenna socket inside the radio. The centre (antenna) pin to ground.

(View ascii pic in fixed font)



This technique is used in expensive professional equipment that is being used in areas where high RF voltages are present. This has device infact saved one 15,000 dollar receiver (na IFR Spectrum analyser) from the RF power from a transmitter that was accidently connected directly to antenna input and the receiver took full TX power for 3 to 4 seconds before the engineer realised his "error".

On another occasion, he managed to do it again - this time he melted the diodes BUT the receiver survived.

Cost? Replaced 2 x 10 cent diodes. (And a few choice words from me - I did not let on that I had done that same thing a few days earlier! - SHhhhhh!)

Caution: Strip down and modify your precious radio ONLY IF you know what you are doing AND the gaurantee is over! (Or that you just don't care!!)

Regards & have fun

Donald

Hi David

I suggest that you subscribe to the UK counterpart of this group and ask there.

Sorry I cannot help re Scotland - I live in the "West Country" which is in the South West lump of GB - about 500 miles away!

Alternatively, see Javiation web site for a book "UK Scanning Directory" this contains over 20,000 freq and users - It is not set out in a regional format but lists most generic and specific users in a freq sequence. It's a "must" for anyone doing scanning in the UK costs about 28 dollars

Email: clough@javiaton.demon.co.uk
Email: info@javiaton.demon.co.uk

Web: http://www.demon.co.uk/javiation/

Also try: alt.radio.scanner.uk

OR subcribe to the Euro-Scanner mailing list. Euro-Scanner is devoted to communications monitoring in the VHF/UHF radio spectrum and beyond.
To post to the list, send an e-mail to :euro-scanner@grid9.net
To unsubscribe the list, send a mail to:euro-scanner-request@grid9.net
with only "unsubscribe euro-scanner" in the BODY of the e-mail.

Have fun

1493. Pro-2035 for $150 - good buy?

Newsgroup: rec.radio.scanner
Date: 1997-05-18 00:00:00 UTC
From: papercut@pgh.nauticom.net
Message-ID: <papercut-1805970759230001@163.net7.nauticom.net>
Source record: 197621

I found a pawn shop that will sell me a good looking Pro-2035 for about $150. I know it won't get the cell bands, but it still seems like a good price, though I don't know much about what a fair price should be. I also read that sometimes this radio can pickup cellular "images" in the 1100 band. I have no idea what that means either, or if it's true. Thoughts on this would also be appreciated.

Is this a bargain, fair price, or too much? Please e-mail me if you could, my ISP gets news posts about four days delayed. If this is a good price, I'd like to grab it soon.

Thanks.

Well, I would second that as a feature for a scanner ! Not all services
use
PL DPL or they share a common PL DPL. Would be nice to have two tone
signaling
on a scanner radio. Anyway, Communications Specialists has a board that
does two tone
decode. FYI I use a telco piece of equip called a Halcyon and take
discriminator
audio from pro2006 to get correct hertz for paging. Then program I a
radio up. Newark NJ FD
is very very busy, but they send a two tone page for third alarms +.
Much better
way to monitor. Scanner Buffs, whatta think as a feature ?

From the FAQ article "SCANNER RADIO REVIEW BRIEFS:"

[...]

PRO-2037: 1994 vintage. Triple conversion all plastic base
scanner made by GRE. Home version of the PRO-62 portable
but with more intermod. 200 channels in 10 banks, one
search bank, selectable AM and FM. Uses up conversion
circuitry but inadequate front end filtering still allows
images, though not as bad as in 10.7 or 10.8 MHz IF
circuits. Crisp, respectable audio given the top mounted
speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in
July 1995 Monitoring Times.

I've been experimenting with 'trunker' and can summarize here what I've
seen.
I'm curious if anyone can help with a few questions:

1) the 'idle stream' of data consists of the following three commands,
whenever
nothing else needs to be sent:

Data Group/Individual Command (hex)
308F G 03c0
1F3E I 032B // 1f3e is the system id?
5000 G 03C0

none of the entries in this set correspond to a known group id, radio id,
or
usable frequency number

2) every so often, the following series comes across:

Data G/I Command
1f3e G 0308 // more to follow, data == systemid
2936 G 030b // note after seeing next word that the
data part of this
// word is 0x2800 + the frequency value from the next
command
1ffe G 0136 // assign data channel to frequency

1504. THE BEST BASE ANTENNA (The Ferret vs Nevada Discone)

Newsgroup: rec.radio.scanner
Date: 1997-05-18 00:00:00 UTC
From: studioded@aol.com
Message-ID: <19970518171601.NAA09541@ladder02.news.aol.com>
Source record: 197632

I am looking for anyone who has used the Ferret base antenna made by Austin Antenna. I am planning to put either a Diamond D-130J or Nevada SE1300 Discone in the attic OR put the Ferret outside, on the back of the house 6" off the siding under the roof line as I do not want to alter the aesthetics of the house.

I mainly listen to 150 - 870 Mhz but occasionally listen down to 26 Mhz. I live 20+ miles outside a major city and have many paging transmitters nearby that often cause my double conversion scanners to lock up, however this new base antenna will be connected to a BC-9000, which is NOT currently affected by pager signals.

If anyone has used the Austin Ferret I would greatly appreciate your input. I also welcome any comments on the Diamond 130J or the Nevada 1300 Discone.

Please send E-mail to studioded@aol.com in addition to posting here so I will be sure to get the info.

Thank you - Dave

Jeff,
My unit came from Communications Electronics Inc. in Ann
Arbor, Michigan. They typically run a full page ad in
Monitoring Times each month. I also have them listed in my
Scanner Dealers FAQ on my Radio Monitoring page.
Good luck!

> Any advice or suggestions are very welcome

Doug,
The BC230 is a nice radio. It is sort of a lower-end offering since it does have the frequency "gaps", no mil-air, FM radio or TV audio coverage and uses double conversion which may give you some problems with radio intereference if you live in a high radio-frequency area(TV antenna, radio stations, cell-towers, pagers, etc.)
For this price range, a little more will get you the new RELM HS200. An excellent quality unit with same number of channels and frequency coverage but also has CTCSS/DCS, a backlit keypad, better audio, and more search-skip frequencies.
ACE Comm. sells this unit too. I have purchased from them and did not have problems. But I'm in the US too. Typical shipping prices seem to run in the order of $35-$50 based on the size and cost of the radio when I have ordered from the UK.
Best of luck!

> Frequency. Sorry about that.
>
> de Dave, NF2G

Actually that is not correct. A CTAF may be a frequency used by a unicom
a multicom station but it is not an official term for the unicom or
multicom. A "common traffic advisories" can be conducted on a tower
frequency when the tower is not in operation.

In other words, a unicom (or multicom) is a licensed station, not a
frequency. A CTAF is a frequency, not a station.

The current "offical definitions are"

Aeronautical Advisory Station (Unicom). An aeronautical station used
for advisory and civil defense communication primarily with private
aircraft.

Aeronautical Multicom Station. An aeronautical station used to provide
communications to conduct the activities being performed by, or directed
from, private aircraft.

> Thanks in advance,

The same op amp decoder works, but there are some better ways to make the decoder. Use a LF411 op amp that you can order from Digi-key. It is a JFET op amp instead of a BJT like the 741. This insures that the DC output of the discriminator doesnt take as much of a drop which in turn loses some protocol info that is necessary for the decoding of the MDT.

Go to ftp://ftp.netcom.com/pub/so/source/index.html and download both the mobitex.zip and the mdtstuff.zip. Follow the directions in the mobitex.zip to make your decoder with the LF411 and .02uF cap, etc. Then you can use the MDT program to decode the transmissions.

Try to use the discriminator output to decode. If you need the baseband output for your scanner, go to www.dejanews.com and do a search on the word "discriminator". Bill Cheek has recently posted a large file of the different scanners.

Hold on a sec. I can see people being interested in these. It's kind of neat to see how things have progressed (or failed to do so) over the years, and catalogs of all sorts can be great for that. I'm not saying the price is right, but the concept is sound. :-)

Also see "multicom". Multicom frequencies are also used for common traffic advisories at uncontrolled airports.

There are differences in a unicom and multicom station but by general definition they are both intended for communications with private aircraft and are not for air traffic control (just aeronautical advisory).

At a controlled airport it is normally used to coordinate getting fuel or asking the locals where you can park, stuff like that.

[snip]

> >(3) What does Class B refer to? (different aircraft types perhaps???)
>
> Class B airspace. New designation for Terminal Control Area (TCA).
> This freq. is used for aircraft that need clearance to transition the
> Class B airspace.

You will probably hear aircraft request and/or receive clearance for class B. Aircraft flying under "visual flight rules" must hear the magic words "cleared to enter class B (Bravo) airpace" from the controller. Other airspace such as class C and D require that VFR aircraft establish two way communications with the controller(s) but do not require a specific clearance to enter.

Class B airpace involves the country's (USA) major airports. It will start at the surface of the primary airport and go up to 10,000 feet (nominally - LAX goes to 12,000... SFO goes to 8,000). As you move away from the airport the "floor" of the class B airspace starts to go up. So 10 miles away the class B airspace might be from 4,000 to 10,000 feet which allows "non participating" aircraft to get into outlying airports

or fly through the area with needing a clearance by going underneath.
The outer permiter if class B airspace will normally be a 20 mile radius
(maybe 25...now I can't remember) from the primary airport.

A three dimensional example of a "textbook" class B airpace model is
often described as looking like an "upsidedown wedding cake". If you
looked at SFO's (and others) it would appear as if the guests have been
served some pieces. They are tailored for local traffic needs.

[snip]

> >(6) Why are there multiple tower frequencies? (backup perhaps?)
>
> Bingo. 257.8 is UHF for military aircraft.

There are also multiple VHF tower frequencies at some airports. This is
generally so that multiple tower contollers can handle traffic on
multiple runways. For example I fly out of Livermore, CA (LVK) where
there are two parallel runways - traffic using the south runway (25L-7R)
or operating south of the airport will sometimes talk to a contoller on
a different frequency from those on the north side.

> >(7) What is the difference between all the listed approach frequencies?
> > (the departure frequencies are dependant on runway direction but
> > the approach freqs don't have this designation...)
>
> AFAIK the departure freqs. aren't dependent upon runway direction but

> 123.85 is the "Final" approach controller for Hopkins (during peak
> traffic hours) and 126.55 is Approach control for low altitude
> arrivals and arrivals to other airports in the area.

I many cases approach and departure frequecies are the same in a given
"sector". Multiple approach control frequencies are usually broken up
into areas or "sectors". Depending on what type of directory you are
using appraoch frequencies are usually associated with a direction of
arrival. I.E. Arriving from the northwest in a certain area would
require you to talk to a different controller than if were arriving from
the south (directions depend on the airport/area).

Try [the folliwng Web page - should provide something of interest

www.termcon.demon.co.uk/

For printed publications the UK Scanning Directory is about the best bet
(18.50GBP). It has its faults but there is little to match for general
frequency coverage.

For airband listening there are several guides available for you to consider
all of which provide more/better info that the above on that specific
subject.

All the best

Source record: 197445

Hi all!

Going to Reno in a couple of weeks to stay at the Eldorado Hotel.
Does anyone happen to have any security frequencies for the
casino? (No - not planning a heist !)

Also, how about the local police frequencies for Reno?

Thanks to any who reply.

Dave gekko95@ix.netcom.com

1530. FS: Pro-2022 800mhz Scanner w/cell

Realistic Pro-2022 800mhz Base Scanner - Cellular Mod Done!

This is a great little base scanner, comes with antenna, photocopies of needed parts of the original manual, and the scanner. It can run on AC with included cord, or off of battery with optional car cord. This is the one that was already sold, but the buyer backed out. It is in very good shape, and works flawlessly.

Please just do a search with webcrawler or something for the frequencies and other info if you need it. It picks up everything from right above CB (29.9 i think) up through the 900mhz range... lots and lots of freqs - and the cell mod is done, like I said, and you don't need to do any keypad tricks or anything... you can search them, direct entry, whatever... the LCD display is also backlit for use in the dark.

$175 + 5 insured shipping - money order only please.

Reply quickly - first one that wants it gets it.

Specifically here in Atlanta area for law enforcement, you'll find
them being used most heavily by Dekalb County police, for both
registration and actual dispatch calls. Gwinett County has them but
merely for registration and tag stuff, and for private dialogs.
Fulton County does some dispatching from them, as well as the reg and
tag stuff. Task force City of Atlanta cars have them for registration
and tag purposes only. Cobb does not have them.

Scanner and shortwave listeners have been here long before cell phones came
around. The makers of the cell phones knew what they were doing by
transmitting in the open. They did not want to add the cost of security
devices to their product. You can not yell across a supermarket full of
people and then pass laws to insure your privacy.If you need that level of
privacy then you need to use devices that make it impossible for anyone but
the government to listen in. The public has once again been duped by big
money interests. How hard can it be to get a used cell phone, disable the
transmitter, and then program in YOUR phone number. That would give someone
access to all your cell calls and all the anti-scanner laws in the country
would not prevent it.....

> Much better way to monitor. Scanner Buffs, whatta think as a feature ?

If you need to make a quick fix and doing the exact thing that you are
looking for....in Bill Cheek's Ultimate Scanner book he has a design for
a Data/Tone Squelch which used a few caps, diodes, a LM339 comparitor, a
few wires and a switch or two. Set this up just like you would for a
Data/Tone SQ, but have it control the MUTE circuitry for the scanner. Now
if you are listening to normal voice traffic on the scanner it will not
allow the scanner to trip the audio, but a constant data tone like a
paging tone would do that. A 555 could set you up for a dwell time. Ad
another switch or two do defeat this feature.

Wiggie

To Suck or not to suck.....

Let's face it. For the average Joe to walk in and request something small and trivial...It's not a bad place. The problem comes when the customer actually has more than a small clue of what he/she needs. Granted we are a small group (or at least my ego likes to think so!) but the problem is NOT in our imaginations.

This lack of expertise on the part of the employees could easily be over looked by many if it weren't for RS claiming to have technological geniuses working for them. This is evident in their hilarious slogan: "You've got questions...We've got answers"

I would like to propose a challenge to all the people out here who feel they are more competent than the local Radio Shack employees.

Come up with a more appropriate slogan for RS. You can't have "You've got questions...We don't have a fuckin clue" or "You've got questions...Let me see if it's in the catalog" Because those two are my entries.

Have fun!

I joined this newsgroup because I have an interest in scanning and radios. What I have found here is a lot of bullshit!!
Magazines, such as Monitoring Times and Popular Communications, suffer because of the long lead times. I thought that this newsgroup would provide current and valuable information.
What I have found is a lot of bickering, whining, and complaining about every fucking thing under the sun. Bill Cheek, John Mackey, Radio Shack, and just about everything else is slandered and ridiculed. You have to be the biggest bunch of fucking losers I have ever seen.
Everyone hates Radio Shack, yet you all use Radio Shack scanners.
bill conduit, or is it can't do it, sights all the faults of Radio Shack and the way they treat their employees. Has anyone ever stopped to think that he sure knows a lot for someone who supposedly doesn't work for Radio Shack. Come on, we all know you are a part timer bill.
And what about the personal attacks on Bill Cheek? What do you cheap bastards want? I know what you want. You want him to give all his valuable information away for free.
This is the ONLY newsgroup that I have ever joined that went on and on about the dumbest fucking things that have nothing to do with the newsgroup.
I guess my friends were right. When I bought my scanner they told me I must be turning into one of those nerds with the radio on their belt. Well guess what? I don't want a fucking thing to do with this hobby or you sick bastards. The nerds are meeting at Radio Shack. I hope you all have the balls to walk into the store.

Adi- fucking - os

I have a Uniden BC 200XLT 800Mhz Scanner for sale. It has just come back from Uniden repair department where they fixed the "no audio/no lamp problem". They also checked alignment and replaced the battery pack. It has not had the cell mod done, but if interested I have the information for that mod (for educational purposes only) of course! I am asking $175.

> manually select AM or FM?

AM, NFM & WFM are selectable on any frequency.

The PRO-2042 is not cellular restorable by "clipping diodes" etc. The only
way to restore the full 760-1300MHz coverage on models sold by RS in the USA
/ Canada is replace the main CPU with the ones used on the European version
that has full 760-1300MHz. This is not a socketed CPU and is a 100
pin surface mount component - not for the faint hearted or the incorrect
equipment.

Over my dead body will anyone remove these capabilities from my scanners.
(FWIW, I do not monitor cellular phone calls, but I do monitor other
services
which use the 800 MHz band.)

Always remember that a cellular phone is basically a radio transceiver, and
it
CAN be monitored. Think twice about what you say on a cell phone.

It was shown before a Congressional subcommittee that by shorting out two leads from an IC you would restore unattenuated cellular images. This radio will be rereleased when a bit of goop is cemented over that area of the scanner.

Hi... I just got a new Optoelectronics Xplorer which has the cellular blocked! I have obtained what I thought was a valid unlock code to enable the cellular portion, but have had NO luck applying it. Does anyone know if Opto has changed the cellular enabling code in the Xplorers???? If so, does anyone have it?!?!

The code I have is:

"FE FE B0 E0 7F D6 78 19 52 27 96 34 45 88 01 FD"

If anyone has a new one, or has an idea what I'm doing wrong, please let me know. Thanks in advance.

The line out is volume controlled on the 9000. If I want to do "silent" recording I use an attenuated cable, available at RS, and record from the External Speaker Jack which kills the scanner speaker. I suppose I could also plug a dummy plug into the Ext. Spkr jack and continue to record from the line out. The tape recorder I use is a RS cheapie with a red LED to show record level and setting the scanner volume control at about 11 o'clock does the trick.

The scanner manual is very vague about the recording function, although it worked great once I did some experimenting and figured it out..

This radio was cleared out by Radio Shack about 8 months ago for
$199-$219. It originally sold for about $450.

With the addition of an Optoscan 535 ($199) this radio has the potential
to SMOKE! I own one w/ the 535, and would not give it up for anything.
Box stock, the radio has two pain in the butt features, the 100 channel
banks & the search and store system. The 100 channel banks are a pain
for obvious reasons, and the search and store does not check to see if a
freq is already stored before storing it again. It is possible to fill
all 100 temporary channels with the same freq!

I bought mine last November for $199 and I would pay $150 for another of
these radios in a minute! 8^)

Yeah, it is normal for *us*, FM too, but it's still not an "air band."
Medevac choppers around here transmit on the 151 MHz Special Emergency Service band, but it's not an "air band" either.

Ever heard any BLUE MOUND calls? I operate in the M137-M144 band every day...

Depends on which interface you are talking about. Most of the
software uses the same interface, derived from the Hamcomm program a
long time ago. Example: May 1997 Electronics Now magazine article,
PD203.ZIP, POC32.ZIP. These are compatible with the MDTSTUFF program.

See ftp://ftp.netcom.com/pub/so/source/index.html

The interface in the March 1997 Popular Electronics is incompatible.

Obviously you don't want to have secure communications over the phone.
I have a right to expect at least a law that encourages enforcement of
current regulations. Are you suggesting that at the start of each
call that I take the time to read a disclaimer to the individual on
the other end?. I think not. The simple solution is to remove 800MHZ
capability from all scanners. This can be done when radios are
returned to service. It won't get them all, but it may get the one
used to intercept my conversation.

1572. bc230xlt -advice needed

Newsgroup: rec.radio.scanner
Date: 1997-05-19 00:00:00 UTC
From: doug h beg <doughbeg@hotmail.com>
Message-ID: <33805ABE.7588111E@hotmail.com>
Source record: 197528
Cross-posted to: alt.radio.scanner.uk,alt.radio.scanner,rec.radio.scanner

I am seriously considering purchasing a scanner possibly the bc230xlt. As I am a first time buyer am am unaware of what to look for when buying. I have read all the faq's and I think that bc230xlt is a good buy.

Does anyone own this scanner ? If so what are their opinions about it ?I would very much like to hear from them. Are there any better alternatives(in your opinion) at this price ($200 approx. £125). If I choose to buy, I will probably order the European model which covers cellular from "ace communications" (http://www.ace-communications.com) Has anyone ever bought anything from them ? I am unsure of what to buy from whom

The bc230xlt gets good reviews but I notice that it coverage is not continuous. Does it receive military frequencies, cordless phones, and TV ? Is the a scanner around in the same price range which can do better.Also I live in the UK what are the shipping prices like ?

Any advice or suggestions are very welcome

Thanks for your time

Doug

Fine by me. Let's start a new thread on how some people minimise their typing workload by avoiding such unneccesary things as capital letters and full stops to create run on sentences which make it hard for other people to follow what they are saying thereby transfering the workload from the writer to the readers which hardly seems fair I think and I hope you agree.

Barry

All I have to say: The law is too far out of reach already.
~~~~~~
American Heritage Dictionary...

Police State {Noun} - 1. A political unit in which the government exersises
rigid control over the social, economic, and political life, ESPECIALLY by
means of a secret police force.

Examples:

Social - Drug war

Econimic - Corporate welfare

Political - Califonia & Arizona

Secret police force - Scrambled police broadcasts
~~~~~~
If you support the current government then you support a police state for
yourself and most likely a dictatorship for your children. Don't you love
your children?

It seemed that RS's Pro-26 recall was due to the cell images (it is a
triple conversion scanner, but it gives you a very clear cell image).
RS did not want someone to listen to the cellular bands by using the
image freqs. (http://www.geocities.com/Yosemite/1325/pro26.htm)
I expect that newer version (?) of Pro-26 will have very low or high
IF frequency to disgard unwanted 800 MHz signals.

The similar thing happened for HTX-204.
You can transmit outside of ham bands by ripping of some hardwares
from the tranceiver. According to the rumors, RS decided to recall
because of this.

I don't know, but RS is too sensitive...

well what I will do is not to buy any RS's (unmodifible) products in
the future. I am sure RS loses the customers. There are tons of
cheaper (and better quality) products out there that allow you to
listen to cell bands... transmit on outside bands and so on.

> Good.

Okay, I've counted at least four postings in this thread that seem to indicate that people are under the impression that open broadcasting is about TRANSMITTING over police frequencies. Let me clear this up as I can see why everyone thinks this.

When I talked about convincing my local police agency into giving citizens access to police communications via police portable radio units, I only meant RECEIVE-ONLY radios. The reason some citizens must now get their police radios directly from the police is because the digital radio systems are not monitorable using ordinary police scanners. Open broadcasting has several solutions, but one of them involves selling receive-only police portables directly to the public, which is what I meant in my original post. Normally police agencies only make this kind of committment to organized media outlets. The open broadcasting solution is to sell them to everyone. The radios "sold" are programmed as such that they cannot be used for transmitting (i.e. the transmitting functions are programmed *off*).

You have to understand we are talking about digital systems here. Anyone who DOES manage to use a police-sold radio for broadcasting, can now be electronically locked out of the system by dispatch. It's very easy to do. And like cell phones, specific radios can even be "tracked" if police have a mind to do it.

One final point, the phrase "selling police radios to the public" is itself a bit misleading. I use it in all this rhetoric, but what I really mean is that police should offer radio PROGRAMMING to the public. Anyone can buy a so-called police radio directly from Motorola or Ericsson. There isn't anything special about them. What you must convince your local police agency to do is to agree to PROGRAM them with the specific talkgroups used for basic patrol. Hillsborough Count, Fl. and Seattle, WA. will do this for members of the general public.

I hope this clears up a lot of the misunderstanding. Obviously the open broadcasting movement does not advocate allowing citizens to transmit over the air WITH police. I will make the changes in my wording the next time I post my Internet Resource Guide to Open Broadcasting again.

Sorry to get everyone so needlessly up in arms here! :)

Go to www.optoelectronics.com to find out about the interface. Also follow the link on that page to information about Probe Software. The 2035 or 2042 combined with a OS535/Probe v3.0 is an outstanding setup. The 2005/6 with the OS456 is not too shabby either, but it is usually easier and cheaper to find a used 2035 and with the OS535 you can scan faster and have a few more benefits.

Source record: 197296

I am selling my backup scanner, a Regency Mx-5000.

Frequency coverage 25-550 Mhz, AM, NFM, WFM in 20 memory channels.

This radio was produced in the early to mid-80's by AOR in Japan for Regency and is similar to the AOR AR-2002.

This particular radio is in good condition, but does have a slight intermittent drift problem (This was a known bug in these radios) on frequencies below 225 Mhz. However, the radio works like a champ on everything above 225 Mhz, so military aircraft and UHF public service come in great all the time.

I'm asking $75.00 for the radio, plus shipping.

If interested, please contact me via email at: llevy2@pacbell.net

Thanks,

-Larry

I am considering the expensive purchase of a Diamond V2000A (Amateur) Tri-Band Base Antenna. It covers 6 Meters / 144 / 440. Impressive gain figures in the amateur bands and I have always been impressed with the out-of-band performance of their dual band mobiles. Is anyone out there using one these for out of amateur band monitoring? Comments? Ease of installation? Do I need an extra installation kit, too? Thanks in advance. Reply E-Mail or post here. Happy Scanning.

[useless ranting deleted for everyone's benefit]

I, for one, won't miss you. Not that I ever saw you contribute to this group. You are no different than most of the masses who sit their ass and pass judgement on others. How very benefecial for all of us that we have you to tell us what Nirvana is. We can only hope that this newsgroup can aspire to the lofty and perfect standards with which the rest of your life must be run. Lord knows this newsgroup was created for your personal edification.

And if you can't separate the wheat from the chaff, well that's your problem. It only takes me once to see a subject header and determine it's a pack of morons wasting bandwidth. After that I don't bother reading any posts with that header. I'm truly sorry that you could not develop the same skill. Instead, maybe you can work on lowering your childish expectations about what this newsgroup "owes" you.

There are good people here interested in promoting the hobby and helping each other. It's obvious that you were not, nor will be, one of them. And what has all your ranting accomplished? Absolutely nothing! You haven't changed a thing. Except for giving us something to laugh at possibly! Good job! Thanks!

Hey gang...did ya hear it...the S/N just got better! ;-)

Cross-posted to: alt.radio.scanner,rec.radio.scanner

The county services in my area (fire, EMS, sherrif, etc.) are using a trunked radio system with an annoying habit. At the end of each transmission, the repeater sends about 5 seconds of beeps. I'm not sure if this is for some technical reason, or if it's done just to annoy people with scanners. (I heard the same thing recently when visiting in Canada, so it seems to be a popular trunking system.)

The net effect is that the scanner remains on one channel listening to beeps while the conversation continues on a different channel.

I've manually gotten around this (sometimes) by training my finger to press the SCAN button whenever my ear hears a beep. (Very Pavlovian.) Has anyone built or seen an electronic system to detect the beeps and put the scanner back into scan mode? (I'm using a RS Pro-25.)

Greetings,
I bought the Message Tracker Pro for decoding Pocsag and it works great. However, I have an old 486/66 and another scanner and wanted to run the program off that too. However using a serial interface demodulator from http://www.pervisell.com connected to my other scanner's speaker output jack, shows no signal on my Message Tracker Pro software. Using the serial interface cable that came with my Message Tracker Pro works OK on both computers. Anyone been sucessful running MT-PRO on other than the manufacter's interface cable, or do I have to spend another $240. for the SAME program on my other computer. I assume it's a software problem as the demodulator from Pervisell runs the PD203 Pocsag decoding program OK, that's been floating around the Net.

Source record: 197307

A couple of things to think about with Pre-amps (just some of my thoughts, by no means take as gospel!).

Pre-amps are a good way to establish a signal to noise-floor reference, which means
if they are installed as close to the antenna as possible, they will do a fair job of negating
co-axial loss. The problem with pre-amps (and all amps) is 1) they amplify everything in their
pass-band: and this includes noise. You will hear signals better, but will also hear noise better.
2) Pre-amps may be subject to intermod overload if close to strong transmitters. probably not
a problem with an attic antenna in a housing area.

The problem with noise increases with the bandwidth of the pre-amp. A typical 70cm or 2Mtr pre-amp
will have a noise figure (NF) of around .5 dB. which is not bad. Broad-band amps may be as high
as 3-4 dB with some up to over 6dB. This can be a little too annoying. This will manifest itself with unusually high S-meter readings on FM signals - which is no big deal. but higher HISS on SSB or AM stuff.

So, what does this mean? Pre-amps installed at the antenna can help a lot, especially at higher
frequencies, and in particular, with long co-ax runs. The best way to use them, though, is with
an on-off switch with by-pass mode. This will allow you to turn it on when you decide it helps,
and by-pass it when it is making things worse.

Have fun

Cheer

I picked up a used bearcat 860 at dayton...of course i have
questions...first...mods? more channels? cellular coverage possible?

2nd...i'd like to mount it in my car but it has AC power requirement.
If I hook it to 12VDC (which the rectifying bridge will pass) will
this damage the radio?

Thanks all...

Does anyone know if the techs. at the Radio Shack repair centers work for RS or do they just contract the work to your local TV repair shop?

The techs work for Radio Shack. We have a Tandy Repair Center over in St. Petersburg, and while I had a couple of units in for repair I talked to the tech working on them several times.

Well, then you are an irresponsible son-of-a-bitch. No person, without identification which indicates that they are permitted to use a particular radio system, should be allowed to purchase them. You can already get equipment mail-order, and in most ham-shops which monitors the band. Giving any idiot who wants one the ability to buy the actual transmitter is stupid. Now we will have every jerk in YOUR area jamming police, fire, and ambulance freqs because you are afraid you might miss something.

I have a PRO-200 scanner for sale, it has the speed mod, full cellular, and 400 chanel mods done. no book or box, price is $200 I ship.

I have a Uniden BC-855xlt for sale also. It has full cellular and the 100 chanel mod done. Price is $90 shipped.

If you want both it is $275 shipped.

Thanks for reading this,
Ed.

This is ridiculous. As a 911 dispatcher for over 10 years now, I have seen more abuse by idiots with a scanner running out in the middle of something or leading police on wild goose chases. As an active scanner buff, I will miss listening to our local and state police when they go digital, but I certainly will sacrifice the listening pleasure for the knowledge that the criminals wont be listening to the scanner and learning the daily procedures of the police. Trust Me, the amount of good done by citizens with scanners is overshadowed by the amount of problems they cause.

This may be a little too obvious, but check to see if the pin on the male BNC connector hasn't broken off into the female connector, if this is not the case take a multi meter set to ohms and check to see if you get continuity from the center pin on the female connector and on the outer part of the same connector (the ground) if you find continuity you may have a short somewhere along the receive path, (in that case you'll have to sell the rig to me cheaply, he he) you can do the same check on the male antenna connector to check for a short or ground in the cable. good luck to you

D.B.

Sounds like your monitoring a GE radio system. There is something you
can do to detect the tones and in some cases buzzing sound and make
the scanner or radio continue to scan normally.

I have a circuit for GE radio systems that I make here In Toronto and
have installed it in may two way radios (used for scanning) as well as
scanners. If what you head in Canada was in Toronto or Halton Peel
region then I have what your looking for.

Please email me with the type of Motorola radio or scanner you have
and I'll see if I can help you.

Sounds like your monitoring a GE radio system. There is something you
can do to detect the tones and in some cases buzzing sound and make
the scanner or radio continue to scan normally.

I have a circuit for GE radio systems that I make here In Toronto and
have installed it in may two way radios (used for scanning) as well as
scanners. If what you head in Canada was in Toronto or Halton Peel
region then I have what your looking for.

Please email me with the type of Motorola radio or scanner you have
and I'll see if I can help you.

<Polite Snip>

There are a lot of varying attitudes about whether or not the public should be allowed to listen in on police calls. Your opinion represents that of many others. Still, there are police agencies that feel the exact opposite, especially in this era of so-called community policing. Dallas, Texas, and Hillsborough County, Florida, are just two such areas that have acknowledged the value of open broadcasting.

To spell it out, the other side of the coin has to do with community bonding and the prevention of secrecy which is considered an active ingredient in corruption. We do not have "secret" police in this country and technical implementations that encourage secrecy should be examined very closely. Also it is not "ridiculous" at all. Open broadcasting has been the rule for nearly 60 years of police radio.

The open broadcasting issue does not claim that all communications should be openly broadcast. There is a basic and recurrent reference to patrolcasts which empower the community to remain aware of criminal activity in its own neighborhood via the communication of its own commissioned local police agency. A force centered on the people, not the selfish agenda of that force itself, or the state.

Every day I step out that door, my personal safety is in some way jeopardized by open broadcasting. It may kill me because of some criminal using a police scanner. It may kill several officers who have sworn to take that risk when they signed up. But the social benefits of open broadcasting ARE overwhelming and there have been at least two cases here in Tampa where the fact that the police openly broadcasted, officers lives have been saved. To date there has been no reported loss of life due to the advantage of open broadcasting whatsoever. Nonetheless, I will not opt to argue that problems do not arise because of it. After all, criminal use of, say, police scanners, is often too integrated to single out. I will only argue that the value of open broadcasting far outweighs the cost of closed broadcasting.

>of something or leading police on wild goose chases. As an active >scanner buff, I will miss listening to our local and state police when

>they go digital, but I certainly will sacrifice the listening pleasure

You won't miss it. As a member of the police force, civilian or sworn, your chances of obtaining a radio are far greater than the average citizen with no affiliation to the police, local government, or the media whatsoever. That is my entire point, sir. You will be informationally empowered while the surfs around you will not. :)

>for the knowledge that the criminals wont be listening to the scanner
>and learning the daily procedures of the police. Trust Me, the amount

The daily procedures of the police are not exactly top secret. Any high-grade security company is well aware of them. Any soldier going through military boot camp learns them plus some. In fact, if you scour the internet hard enough you will even find the text from Central Intelligence Agency manuals. Procedures are not secret. If they were, I'd move out of the country. The organization and implementation of those procedures takes resources and discipline that often go way beyond the ability of common criminals--and that, really, is the only "secret" of successfully applying procedures anyway. Again, we are only talking about patrolcasts...not tactical or surveillance operations.

>of good done by citizens with scanners is overshadowed by the amount
>of problems they cause.

Many of your arguments are addressed at the Calling All Citizens website (see sig).

In michigan, it's also unlawful to equip an automobile with police monitoring equipment. I had a handheld confiscated, and when I went to court, they dismissed the charges. I did encounter some grief when I attempted to get back my property, but I did get it back. I donn't think they were willing to risk a legal battle, but they sure made it inconvenient for me.

Here are some answers to my own question, if anyone is interested out
there.
Patent # 5,239,680 describes the system id, system status, and parameter
commands, but does not say much about what the 'op codes' are...

> I've been experimenting with 'trunker' and can summarize here what I've
> seen.
> I'm curious if anyone can help with a few questions:
>
> 1) the 'idle stream' of data consists of the following three commands,
> whenever
> nothing else needs to be sent:
>
> Data Group/Individual Command (hex)
> 308F G 03c0

03C0 is a single OSW command that shows system status. The ID field concat-
enated with the Individual/Group Bit represent a 17-bit field, broken up as
follows:

3-bit opcode
1-bit power flag
3-bit dispatch timeout (times 30 seconds)
4-bit selection of connect tone (subaudible?)
6-bit interconnect timeout (times 30 seconds) for phone calls

> 1F3E I 032B // 1f3e is the system id?
STILL UNKNOWN but obviously 1f3e is the system id...

> 5000 G 03C0

This is another version of system parameters, but I have found nothing
about
the opcode part....

> 2) every so often, the following series comes across:
>
> Data G/I Command
> 1f3e G 0308 // more to follow, data == systemid
> 2936 G 030b // note after seeing next word that the
> data part of this
> // word is 0x2800 + the frequency value from the next

This is a double-OSW command - in the first word, the ID field contains the
systemID. in the second word, the 16-bit id field is:
6 bit opcode

10 bit frequency number for the data channel.

I still don't know about the op-codes in the left 6 bits.

> command
> 1ffe G 0136 // assign data channel to frequency
> 136(hex)

I've seen a different value for the id field in a different trunked system,
and for now I conclude that any group
with 1Fxx in it is the data channel.

>
>
> 3) even less frequently from #2, the following single command comes
> through:
>
> Data G/I Command
> 0b19 I 02f8 // neither numbers are group, id, or
> freq for this system...
>
still unknown on this.

All I have to say: The law is too far out of reach already.
~~~~~~
American Heritage Dictionary...

Police State {Noun} - 1. A political unit in which the government exersises
rigid control over the social, economic, and political life, ESPECIALLY by
means of a secret police force.

Examples:

Social - Drug war

Econimic - Corporate welfare

Political - Califonia & Arizona

Secret police force - Scrambled police broadcasts
~~~~~~
If you support the current government then you support a police state for
yourself and most likely a dictatorship for your children. Don't you love
your children?

Eric why don't you just make like a dusty road and wash out with the next rain storm.
You continue on with your mindless drivel. When it becomes apparent that your current victim will no longer reply to your taunts you find someone else to vent your frustrations on.

they problem with trying to record the freq is that, when the guitar player changes his guitar, he gets a new freq, so to try and record would be useless. but there are some players that play the same guitar all night, on the same one.
as far as vocal mic's go they are pertty much ther same way. unless you are trying to bootleg a bar band that does not have the kind of money to have the high tech stuff. also wireless is only mono so if you can record it, chances are that it will sound bad.
also the drummer 99.9% of the time is wired so you wont hear them, unless you are tommy lee when he had the drum kit that spins around.
have fun, kyle

The schematic for the circuit I got with the Pocsag pgm has a coupling cap
at the input of the comparator. It would block any dc from reaching the
circuit.

1650. Pro-2042 Better Than 2006?

Newsgroup: rec.radio.scanner
Date: 1997-05-20 00:00:00 UTC
From: wesgreggg@citynet.net
Message-ID: <3381382e.28546719@news.citynet.net>
Source record: 197377

Hi! I have wanted a Realistic Pro-2006 ever since they came out (&
the 2005 before that, and the 2004 before that :)) but always had more
important things to spend my $$$ on. Now there is the Pro-2042, with (gasp)
1000 channels! It seems to be almost a direct descendant of the 2006
(weren't they both made by GRE?), only faster and with 250% of the channel
capacity.
Well, at $499, I knew I could never afford one, so I have been
looking for a used 2006. The prices I have seen went from $250 for an
unmodified one to $400 (WOW!) for one with cellular ranges & the optoscan
board. Nice, but still out of my price range.
Anyway, I just found a used 2042 (good cond, 60 day warrenty) with
"box and manual" for $289.95! And my birthday is next month... Sounds too
good to be true, but I got them to "put my name on it" pending recpt. of my
deposit (it'll take me a month to complete the purchase :( )
So at this point I have a few questions: Is this a good deal on the
2042? What comes in the box (when new)? How does this compare with the
2006? (In practical terms, like does it pick up as good/better/worse, how is
the interference, what about birdies, etc.) How are the features (I heard it
had some kind of auto-store)? Are there any mods out there for it (I heard
that cellular recption isn't possible which is ok, but it would be nice to
have a scanner without artifically created GAPS in it)? How well is it
built? Oh, and is it possible that there was an "early version" of it with
crappy firmware or something and that is why it is (seems) so cheap?
Basically, I want a scanner that won't leave me wanting a better one
six weeks from now. Not very likely to happen I guess since I was pretty
happy with my old (bought used for $199) Pro-32 until it was stolen three
years ago, even though it was _slow_. It was bullet-proof, I dropped it
about five feet onto concrete and except for needing a reset & reprogramming,
it was ok! If someone (or a lot of "someone"s) with relevant information or
first-hand experience could drop me an Email or at least reply here, I would
be truly grateful. And if anyone has one of these with the
optoelectronics-os535 (???) installed, I would like to hear about that also;
after all, I have another birthday coming along in 13 months or so & my wife
likes to know what I want a little ahead of time<GRIN>.

Thanks,

Sony has several repair centers across the country. Try calling their Kansas City office at (913)888-2622 for further info and locations. They will probably repair it, but it will cost you a fortune. I see the Air-8 from time to time for around $150 used.

RS did not pull these products because they are sensitive, the FCC has
controll of what anyone sells having to do with regulated transmiting
and receiving products. They are the ones who told RS that they had
to remove these products due to FCC violations.

Well i just went on a police ride along the other day and the only
thing i did not go on was a alarm that had gone off at a store at about
3 in the mornig, for good reasons and if the police want to go
"undercover" and all you people that thinck they are up no no good then
stop breaking laws and you have no problems... any yes i have heard an
asshole on the radio that thought he would be funny and play music over
the air..

This is one of those issues where the answer leads to more problems and then the new set of questions leads to more answers which then leads to more problems and the Gordian Knot continues.

There are answers for why the cops prefer radios being digital now. There are questions for why the hobbyists don't like this idea at all. No fun anymore. There are the crooks who listen and they don't like this idea any more. There is the press and they (and me) don't like this answer no more.

What answers come from digitiliation in the next couple of years will turn up more questions and more answers to solve more problems the technology brings. There is just one thing that is a constant: take away the public's right to know and the authorities are not being heard doing their jobs.

GE/Ericson has just contracted to provide state of the art digital radios systems for China. Get it. The people are already in the dark about what their "criminally 'in=charge' elders" allow out to them. Now they are shutting the ears shut completely.

If GE can sell this in China...and then perfect it, why would they stop at China? Mexico a prime market for this. Then the satellites could no longer listen in to the drug traffickers. Mexico would be free to allow anyone to use their system (for a price which the Columbians would gladly pay).

Then into the USA...

bill conduit
etc.

Hi all,

I am going to move to Tucson AZ in August. I would like to know what there is to do in a small town. Ham radio clubs, scanner clubs, etc...

For example, out of the hundreds of Tucson frequencies I have to monitor which ones are the really fun ones? Speaking of police and fire of course.

What are some of the best ham radio repeaters to use? I am looking for a young and progressive type style of repeater to hang out on. Something like the B.A.R.C. repeater here in Los Angeles. Where the average age is about 35 years old. Is packet radio there? Do any of the ham radio repeater rebroadcast shuttle transmissions? Should I bring my 440 repeater with me? If I do is there spectrum space to put it on? How about hill tops?

After growing up in Los Angeles, then spending most of my military career in the Los Angeles area. Moving to Tucson is going to be a heavy culture shock. Any help that anyone can give me would make this shock come a little easier. Right now, I am not shure if life is there. :-)

Kansas City Missouri has had NBT- nothing but trouble with its 18 million dollar Ericsson trunked system. The system was first used by the Fire Department - they complained about being the guinea pigs - now the police are also onboard. Both departments report dead spots, inability to communicate from person to person. Most recently a fire situation resulted in the on-scene people "shouting at each other" when they couldn't communicate by radio. This has been a two year story - with Ericsson putting in additional repeater to try to fine tune the system to meet specs. Just a short update - based on a recent newspaper story.

1666. SECRET AREA 51 CLOSED!

Newsgroup: rec.radio.scanner
Date: 1997-05-20 00:00:00 UTC
From: 5doc@dxnet.com
Message-ID: <33813422.12645767@news.dxnet.com>
Source record: 197405
Cross-posted to: alt.radio.scanner,rec.radio.scanner

ATTENTION AREA 51 FANS!!!

The front cover of the new POPULAR MECHANICS, June 1997 splashes in
a six-page feature article starting on page 54 that Area 51 is doomed
and abandoned!

*** The "NEW" Area 51 is called: "R-6413"! ***

Location: WHITE SANDS MISSLE RANGE UTAH LAUNCH COMPLEX
South of Utah Route 70, east of Green River, Moab to the south.

Alt. aprox. 4,500 feet. As seen on a map provided within the
article, R-64113 is in the middle right hand side of the state of

Utah.

Official documents obtained by PM indicate $8.2 million has been
allocated by the DOE to refurbish a 'missile assembly building and
surrounding site'.

{Special attention DR.PEPPER!}
High-resolution satellite photos (taken by Soviet Spy satellite(s))
that are for sale for most locations are now "unavailable for security
reasons" for the R-6413 Site(!)...

The article also states the CT-43 Transports are now taking passengers
to UTAH instead...

Citing a number of specific and broad reasons (including radiation
contamination) the famous Area 51 closes.

See the PM article for more details!

73's and happy Scanning!

The display of the BC760xlt has a 10mm LED behind the LCD display, whitch is connected via two wires. It is very possible that these wires are loose. If you know about electronics, it should be quite easy to fix yourself. If not, take it to a tech who can.!! Good luck.

> good buy.

The 230XLT "package" is the same scanner as the 220XLT but with an additonal batery pack and I beleive charging unit (for battery pack).

> Does anyone own this scanner ? If so what are their opinions about
> it ?I would very much like to hear from them. Are there any better
> alternatives(in your opinion) at this price ($200 approx. £125). If I
> choose to buy, I will probably order the European model which covers

The BC-230XLT (US model) has lower VHF coverage from 29-54MHz whilst the European version the UBC-220XLT (The 230XLT as a package is not available over here) covers 66-88MHz for our lower VHF PMR bands.

As you point out the BC-230XLT has the frequncies used by US Cellular omitted whilst the UBC-220XLT does not - the analogue cellular frequencies used in the UK are not the same as in the USA (872-904 & 917-950MHz over here).

> The bc230xlt gets good reviews but I notice that it coverage is not
> continuous. Does it receive military frequencies, cordless phones, and
> TV ? Is the a scanner around in the same price range which can do
> better.Also I live in the UK what are the shipping prices like ?

The military airbands are 225-400MHz so it will not receive those. As mentioned above the US version has 29-54MHz so will cover the 47MHz corldess phones over here however you will miss out on fire services etc that operate around the 70MHz area.

The 220/230XLT does not receive FM Broadcast or TV frequencies.

On both models the set will default to AM for aircraft band (108-137MHz) and NFM for all other frequencies - you will find some users here in the UK other than airband that use AM rather than NFM. This is something you will find on all the less expensive models regardless of make. You will also find that the default increment steps are not always as used in the UK but again its not the end of the world. The most noticeable area being the 150MHz area where we use 12.5KHz step sizes and the 220/230XLT will default

to 5KHz. If you try to enter 152.1375 it would store 152.135 as it only accepts 5KHz spaced channels. To move up to a model that has both programmable modes and step sizes means spending more money so its a case of trading of features against price.

> better.Also I live in the UK what are the shipping prices like ?

I can't help with shipping I'm afraid but you maybe charged both Import Duty and VAT on delivery - on the other hand depending on how its sent you might not be charged any at all !

Hope that helps.

HELP ME PLEASE

I own an Alinco DJ-560 which is a pretty useful piece of equipment, now I want to know if anyone out there has a manual for this
Scanning equipment if so drop me a reply on alt.radio.scanner.uk I will appriciate that.

Now for those of you in alt.????hack???? who are wondering why I've posted this on your NG here it is,
I need to know how to interface my scanner with the serial port on my machine
purpose simply to monitor data transmissions on some channels which I have tracked down.

I simply need the schematics or the theory between taking what we all know as data in an audio format and
processing it into rs232 so that software such as terminal with abit of fiddling will be able to interpret what
is flowing over this frequency.

All replys post to alt.radio.scanner.uk thank all in advance

1671. Are Your Police Going 'Under Cover'?

Newsgroup: rec.radio.scanner
Date: 1997-05-20 00:00:00 UTC
From: Xdpinero@Pobox.com
Message-ID: <33819c85.89220114@nntp.ix.netcom.com>
Source record: 197410
Cross-posted to: alt.law-enforcement,alt.radio.scanner,rec.radio.scanner,alt.radio.broadcasting.open,alt.security.neighborhood

Police and public safety agencies in general are quickly turning to closed radio broadcast systems. These radio systems cannot be intercepted using ordinary police scanners or, in a large number of cases, by the new Uniden TrunkTracker. This trend will only accelerate in the next ten years. Regions will continue fall to closed broadcasting systems, effectively shutting out the casual listener unless something is done to make officials aware of the value of open broadcasting. Nothing can be done to stop the technical implementation of trunked or digital radio systems, but agencies can adopt a positive open broadcasting attitude and compensate the public in some way for their newly imposed limitations on public eavesdropping.

I have been successful in making sure that our own county publically proclaims that it will sell police portable radios to the public in the same way that it would have sold them to local "select" media outlets. The same solution, or other more robust solutions, may be considered by your own local agencies, if you let yourself be heard. To this aim, there are now several internet-related resources to help you understand and promote open broadcasting in your own area.

First, there is a web page titled CALLING ALL CITIZENS that I have constructed at the following URL:

http://www.pobox.com/~dpinero (Click on TRUNKED ISSUES)

Next, as of a few weeks ago there is now a NEWSGROUP devoted to the entire issue of open broadcasting. Request that your news administrator add this group if they have not already. This group is called ALT.RADIO.BROADCASTING.OPEN (capitalized for emphasis only).

There is also an e-mail list dedicated to keeping its members updated on relevant open broadcasting issues as they transpire. To join it, simply reply to this posting (removing the spam-shielding 'X' first) expressing your desire. This list will also be used to communicate PROACTIVE efforts to express unified and cohesive mail protests against agencies closing their systems. You do not need to participate in these protests, but you are encouraged.

Finally, there is even a registered IRC chat room on the AnotherNet IRC Network. For more information on this chat room and scheduled chats, simply visit the above page or directly visit the following URL:

http://members.aol.com/truth4000/chat.htm

Folks, if your local PS agency is going to a closed radio system and has hinted or announced that it will not allow members of the general public to monitor them, these resources will be very instrumental in your own fight to convince them to maintain some sort of open broadcasting solution. Don't rely on technical solutions alone. They are slow-coming and ultimately doubtful. Do your part to help change the attitudes of local law enforcement and public safety officials TODAY, before it's too late.

Hope to hear from you!

-- Dave

I welcome direct replies to all my usenet postings. However, to frustrate spammers using e-mail collection programs, my reply address has been slightly altered. To avoid having your reply bounce back, simply remove the preceeding X.

>16 bucks for my mint 1922 Andre and sons catalog out of Milwauke.

I've had an '82 RS catalog stashed away for years. I was doing some cleaning about two years ago and came across it among some old Rainbow magazines. It's interesting to look through it and see that some things have pretty much stayed the same in price, while others have drastically changed. One of the more interesting changes is a complete model III system. It had a whopping 8K of RAM, (expandable to 16K) Two 8" floppy drives, a daisywheel printer, and monochrome monitor for $3000.00. As an accessory, you could get an external hard drive that held up to 1.5 meg of data for $1500.00.

My first step would be to confirm a good antenna connection. If
you're using an external antenna, you could have pulled the cable part
way from the BNC abd not realized it.

Mark

The truth as I perceive it to be.
Your perception may be different.

Haven't seen any (doesn't mean they don't exist - If you find out
any, let me know!).

The IF chip is a Motorola MC3361. Discriminator output is pin 9.

> more channels?

Ditto...

> cellular coverage possible?

Image reception. 10.8MHz/450KHz IF.

Uniden has a page at:

http://www.uniden.com/product/proinfo/scanners/bc860xlt.htm

> 2nd...i'd like to mount it in my car but it has AC power requirement.
> If I hook it to 12VDC (which the rectifying bridge will pass) will
> this damage the radio?

No. It works fine on DC. Use tip-positive for safety. It needs
about 12V for full operation (internal regulator is a 7808). I
measure about 70mA scanning, 90mA at "normal" volume at 12V.

Because it is not a mobile scanner, it does not contain extensive
power line filtering components (chokes) and surge suppression
(zeners). You should add some external filtering and spike
suppression to the 12V line (automotive electrical systems are
one of the harshest electrical environments). And also a 1/2A
inline fuse.

Otherwise, you could kill it the first time you start your car.
Radio Shack sells a bunch of caps and chokes meant for car
stereos. They should be fine.

Good Luck!

> Just a short (long?) note to let everyone know of an amazing thing
>that occured in my quest for frequencies.

The start of another cool thread...

My friend Brandt always says "The worst thing they can say is no!"

A Monday in May 5 Years ago, Chicago...

Been listening to 382.350 and 397.050 for the last few hours. Some USAF command plane is up in narrow band FM mode coordinating phone patchs on multiplexed lines running on the same frequencies at the same time. Each one has about 8 channels, 4 above and 4 below the center freq where I'm hearing the NBFM stuff. Picking through the carriers using an SSB capable radio. Only works in LSB, though. Female aircraft operator working patches through IRONWEED, and other cool sounding tactical callsigns. She's identifying the system / channel (?) as "On ADVENT". Total bandwidth of each signal was about 50 Khz.

The next weekend is Armed Forces day. Me and my pals go outSaturday to the OHare Military Open House event. Many cool aircraft and many confirmed freqs. Many preset freq cards in the aircraft. Among them an EC-135 airborne command post open for tours. Very rare... Very cool systems aboard. Giant reel-out antenna for ELF work. Many command stations. Huge RTTY setup with a lot of encryption devices. Great lounge area in the back. The table there had a command terminal. You could end the world while enjoying coffee and doughnuts at 32,000 feet.

Standing at this huge comm panel towards the rear of the main compartment is a USAF Captain. As we approach I spot a very cool looking military spectrum analyzer and some multiplex gear.

Ted: "Good morning, thanks coming out to OHare today, could you tell us about your console here?

Captain: "This console is the Advent system and it's a multiplex capable comand and control link used by both National Command Authorities and their designates. Actually the majority of the traffic we handle here pertains to training missions"... She continues with a standard USAF PR spiel.

Bob: Is getting visibly nervous.

Ted: "You mentioned 'Advent', we are members of a group of local radio enthusiasts and among the many things we like to listen to are military

aircraft communications. This is just amazing, you know I think I heard this system operating earlier in the week".

Joel: Is smiling
Bob: Is turning green

Captain: Well, if you heard a female operator that was me, I'm the only female in the Air Force rated on this system.

Joel: "Now aside from the system frequencies don't you guys also have a single, AM UHF military channel you use to keep in touch with your command post when youre operating aloft?

Captain: "Yup"

Joel: (Long Pause)... But, that's classified, right?

Captain: "Yup"

Bob: wants to leave...

Joel: "And... You could tell me but you'd have to kill me, right?"

Captain:" Ask me on Sunday, I'll have my gun with me."

Actually she remained serious, jovial but professional. And she was quite informative on the aspects of the aircrafts mission. The Air Force needs more ambassadors like her. And, we probably leaned on her a little too hard. We have to be ambassadors for the hobby, too. Especially with all the recent harsh media coverage. Go ahead and ask the user. Like Brandt says..

"The worst thing they can say is no!"

>What digital signals if any are out there that can be monitored by a digital
>scanner such as the AR7000?

Are you talking about digital signals being transmitted on analog transmitters (Mobile Data Terminals, Pagers, Etc) or are you talking about digital transmissions? The AR-7000 is no more a "digital" scanner than any other radio, except maybe those without keypads! By "monitored" do you mean receiving the signal or decoding the transmission? Decoding digital signals is illegal in the U.S. (Though our brilliant, paid-for legislators didn't bother to define that term, either). The intended protectees of the law are PCS phones.

By picking off the audio from a radio's discriminator circuit, test point or AGC one can currently read these and other modes on VHF/UHF/800/900 Mhz analog freqs:

Some Mobile Data Terminals
Some Pagers (Illegal in the U.S.)
Slow Scan and Fast Scan Amateur Radio Television
Fax and Sat Weather Fax
Radio Teletype
Morse Code
ACARS
PL/CTCSS/DPL Tones
DTMF
Packet (What a racket!)
ASCII

Some of these modes can be read by using the audio from an earphone jack or tape out jack on the scanner. Shareware / Freeware / Commercial software products are readily available to handle the above modes.

Scanners able to convert straight digital format transmissions into analog audio are, in general, not in the publics hands. It would be illegal to manufacture or market such a radio in the U.S.

Some scanners can be computer interfaced. Some interfaces provide a discriminator audio link to the radio for determing PL tones. In this sense they might be considered being more like a "digital radio", but in terms of the types of signals you can decode it makes little difference. Happy Scanning.

Try the CARMA Web Page:

A friend bought one and is thrilled. Fairly inexpensive, PL and DPL
receive, S-Meter, Great audio, no frills. I think it's actually made by
the same folks as the Yupiterus. Too new to have much of a used market. If
you can use these features its a great set. Different key pad entry
procedures than the Radios Shacks and Unidens. Very sensitive on VHF.

Problems w/downloading PDF's & large documents are typically on your dialup provider's end of the line - not ours. This has been proven.

Funny that the US Government just bought 25 BC3000XLTs and downloaded the PDF's fine. . . .

Maybe you should get a life & get a connection that has some bandwidth. We are only using 40% of an entire T-1 so the problem IS NOT on our end.

Well Sir it appears you took alot of time writing a good bye letter to a bunch of people you could care less about. As for you not finding any valuable information in this newsgroup, maybe you are looking for the wrong thing or you don't know what your looking at to start with. As for not wanting anything to do with the hobby of scanning, why don't you just box up any and all of your scanner equipment and ship it to me so you will be free of this horrible burden. I would gladly take care of this problem for you....

So what? Maybe you'd prefer a centrally planned economy? The demand
is high, the supply is low, the seller adjusts his price accordingly.
Got a problem with that?

Oh, there's the bell. Recess is over.

This is something I like to remind people also. The rules are ALREADY in place to deter people from interfering with police or any emergency situation. The laws may not work as hoped to discourage people. People will wind up in violation of the law, and some will even wind up dead (although it's rare as this poster indicates). But the threshold of common sense should benefit the side of open broadcasting, not the implementation of completely closed radio systems. If an agency refuses to enforce the rules, it probably doesn't have a market for the problem, meaning operating a closed system is that much less justified.

Dave

Absolutely, and digital systems give police agencies the latitude to create entirely new realms of secure communication groups. In fact, for all my advocacy for open broadcasting there are things that are openly broadcasted today that I feel should not be. Specifically, response to alarm calls (more and more being handled by MDTs), tactical operations (as in your hostage situations), and surveillance operations.

My argument is delicate. I do not believe basic patrolcasts should be closed. Citizens should be able to know about accidents, police pursuits, calls of suspicious activity, disorderly conduct, and other incidents that are innocuously referred to as "random calls for service" by the public, until a situation becomes more. At some point these calls may turn into more critical events, and appropriate secure channels can be used. When you get right down to it, it's not that much different than the way things are done now.

Actually I am perhaps, an OVERLY law-abiding citizen and am very concerned about the demise of open broadcasting. This thread has been an excellent query into the possibility of police-mystification and state separation from the public. But there are other arguments to cover which is why I and others are now attempting to make an intellectual movement out of it.

These include the utility argument that suggests exploited open broadcasting enhances public safety (most open broadcasting is NOT exploited BTW, except perhaps negatively); increases a sense of bonding to the police in this era of "community policing"; and that open broadcasting may dramatically increase officer safety. Police are oftentimes very instrumental in preventing crime as much as they are at confronting and apprehending criminals. Open broadcasting may help them to do the former even better, perhaps raising their crime-prevention effectiveness to the superior level of high-end private security.

Though you may be less inclined to see virtue in any of these arguments anymore than you do in the argument that open broadcasting encourages an open democracy, they are other argument fronts. Don't be bogged down by this single point alone. There are countless other things to disagree with here. :)

Dave

Good encouraging post. Actually I hope that you are right. I, personally, am a cynic on the issue. However, since I began pressing open broadcasting there have been many people that have contacted me and amazed with things that I didn't know in terms of technical accomplishment. In fact I don't know a lot technically speaking. My scanners have always been simple. But nothing yet has convinced that digital systems will be conquered and I remain pessimistic.

I wish the hackers and the techies well, so long as they stay out of trouble. In the meantime, I still think it is important to change the attitudes of law enforcement--just to be safe. When you look at my entire beef it isn't just about radios or about broadcasting. At every juncture I find my own argument leads down an even longer road that has to with simple openess and communication in any format between the people and the police.

1. Remove power and antenna
2. Remove 4 screws from back cover
3. Remove 4 screws on the front panel and unplug the speaker
4. Locate diode D502 located behind # 3 on the keypad
5. Cut exposed lead of D502 and push the ends apart (800 MHz)
6. Install a diode in the empty location D501 (speed increase)
7. Reassemble radio

Sorry but I don't know any of the other mods. A friend of mine did these two and they worked very well I think he did some others too but I haven't been able to get in touch with him lately. Hope this helps.

Does this mean that once they are re-released most of the units will
technically have been refurbished and therefore cannot be represented as
"new" units? Maybe Tandy is trying to cover this issue up so that they
can represent refurbished units as "new" and, thereby, command a higher
sales price. Why else would they be so tight lipped on the basis for
the recall?

Do you know the difference between a transmitter and a receiver? Let me guess, you wrote your name on the bathroom mirror so you would know what to call yourself when you got up each morning.

The biggest kick is when the people who should be lurking in
alt.conspiracy with Alan Yu come forth claiming "secrets."

The State of NH is buying a digital radio system. When it was
proposed, there was no mention of secrecy. They wanted a radio
which would allow for a large number of users in a narrow, crowded
bandwidth. They wanted a radio which would work equally well in
the mountains, at the ocean, and in the cities. They tested with
Motorola for several years, working out the kinks, and now have a
system they can live with. Fact is, it's digital. They can switch to
analog and communicate with almost every other PD in the state, but
then they can't use those expensive repeaters they are putting up.

Nobody really even tried to sell the "secrecy" feature. They tried
to sell the extended range, repeaters which switched automatically like
cellular sites, and the ability to add MDTs later, to ease the burden
on dispatchers.

Not really. MDTs use a propriatary encoding system to send the packets over the air. Even if you were to be on the packet frequency it is doubtful you could find equipment on the market that could interpret the packets.

As I said earlier, it is not about preventing people from hearing police communications that is the driving force behind digital communication. It is about maxing each departments allocated bandwidth and providing clearer communications. In that it prevents civilians from using their FM police scanners from hearing police communications is just a secondary consequence. I wonder what all those folks with FM scanners would say if the police went to SSB xmitters?

Move where? All fequencies are assigned by the FCC and are coordinated as to re-issue allocations as to maximize the frequencies and yet prevent interference between competing agencies. RF frequency assignments, band width and competing transmission types seem to be beyond you. Why don't you just stick with what you know. Why don't you talk about thumb-sucking?

>
>Would that apply to military transmissions, too? You pay for those

> you are that way yourself.

Gee, I'm a paranoid now. Listen, as I pointed out to this gentleman
after he
explained that he meant RECEIVERS, not transmitters:

I don't really CARE who listens in. I welcome it. There are a great
many benefits
to people who monitor, since they know about road closings and such.
There are
benefits to people knowing what is going on. My father made an arrest
of two escapees
before the press even mentioned anything. Someone heard it on the
scanner, and saw the guys, and told my father.

Where I draw the line is allowing transmitters in the hands of the
public, set for the frequencies. It is illegal (ask the FCC) to have
transmit capabilities on freqs in the public service band unless that is
your job. This is a good idea. Since you think I am paranoid, let me
refer you to the story about the jerk who kept half of the fire and
police departments in the area up until after midnight in a blinding
snowstorm, claiming he was a pilot in a crashed plane. After having to
nearly arrest a local snowmobilers' club because they weren't going to
stop searching, the search was cut off. The next morning, the police
got a call from someone who overheard the guy, and made the connection.
Imagine if this guy had a police transmitter.

In fact, tonight on my scanner (see, I listen too) there was a request for backup at the scene of a woman screaming just off the roadway in the woods. Place the guy from the previous paragraph in this one, just keying the mike. Now, the request for backup is not heard. Hmmm. Paranoid? Nope. There have been other people, and at least one organized group who have gotten access to, and blocked p-saf. transmissions around here, and we're in the boonies....

You should move up here, Dave. The SP is getting the system, but no one else is going to in the forseeable future. $4000 per mobile is just WAY too much for the taxpayers of this state.

This is mostly a tempest in a tea-pot. Police agencies are going to digital communications because they can get more active frequencies out of the same bandwidth. It is all about maxing your RF allocation. It is NOT about hiding from the public. MDTs and KDTs have provided digital computer communications between PSAPs and units for years without this hue and cry about not seeing what was on the MDT. And believe me some of the best stuff is on the MDTs. :-)

In a few years there will be radios on the market that will receive the digital signal and all of the scanner buffs can go back to listening. Now if agencies were talking about encoding the digital signal that might be something to complain about but just getting new technology? Sheesh, get a life.

--
Liberals ban guns -- crime goes up.
Liberals start welfare -- crime goes up.
Liberals cut prison sentences short -- crime goes up.
The only thing Liberals seem able to do is to get crime to go up. Scary.

Some people really confuse me when firing off political comments.

Follow along:
Right-wing refers to Conservative(usually Republicans.)
Left-wing refers to Liberal(usually Democrats.)

Republicans claim to want to reduce the goverment, since YOU are better
at deciding most things about you, for yourself. They want to empower
you to do for yourselves.

Democrats claim to want to help you, by providing for you. They want to
create groups in the government to help you solve problems.

Your President is a Democrat, or at least he is most of the time.
He wants more government, national healthcare, national ID cards, and
the ability to wiretap ALL forms of communication including modems.

The Nazi party was leftist, for the most part, though a lot of people seem to feel differently.

What I am getting to is this question?

Assuming you are right, since the Democrats (the left) has been in control of the country for 40 years, why do you feel that the "right" is responsible?

My impression was that he wanted to keep departments from going to
digital systems. I don't have a great concern with monitoring.
However, having curious civilians arriving on calls before the police
is a problem. WHat if one tried to play hero and got someone killed?

Having been involved with volunteer fire and rescue in SC since 1980, I have seen more "volunteers" abuse what they hear on scanners than any private citizen. ie: volunteer firemen respond to a medical call when they have no medical training, have not been requested by dispatch to be there or, the fire dept has not been dispatched to assist on medical call.
The sad point is, with regulation by the government, these people would still be "authorized" to have and to respond to calls they hear on the scanner.

I have tried several different combinations of preamps, coax and antennas. My best success has been increased height of my antenna, changing to a beam antenna and using low loss coax. Its your best chance for increased range without increased noise and overloading the front end of the scanner.
Regards,
Charlie

Is it just me, or are there an awful lot of posters in this thread who
don't realize that any programmable two-way radio can have transmit
disabled on selected or all frequencies? I've been seeing a lot of
venemous, apparently well-intentioned but possibly not well thought out
views that any clown with a radio programmed with emergency services
freqs will be able to talk or jam those freqs. 'Taint so. I maintain
the public safety networks for eight local providers, and several
handhelds have been put out on loand to the press after the agencies
brought them in to us to make them all "receive-only". That allows the
person with the radio to keep up without getting in the way.
Unfortunately, it also nearly got one press photographer shot because he
got to a "burglary in progress" call before the first Trooper, and was
dressed as, and driving a similar vehicle to, the suspect.
The local Detachment commander had another little session with the press

agents, and laid down (again) ground rules for their folks responding to scenes.
At any rate, while I think it's admirable that a lot of agencies will put radios in the hands of interested parties (at said parties' expense), I think it's essential that they be set to function solely as high-tech scanners, like our folks do here. Our dispatch's area covers the largest land mass in the nation for any single 9-1-1 PSAP, and frequently it's some scannerhound who knows the directions to a sick person's house better than the patient can articulate that makes the difference in getting there in time, by calling our commo center (I was a paramedic for 19 years, then a dispatcher for 9 more). Folks with scanners have saved many butts over the years.
Just my 3.14159 cents' worth.

I have an extra Radio Shack
Pro 2035 with Optoelectronics Os535 board
plus Scanstar Software for windows.
.....I was thinking of raffling off the equipment.
A ticket would cost $5.00
The Draw would take place on Aug. 1 1997
Eveyone who bought a ticket ... There name (first initials only and
last name) would appear on the Scantrix Home Page
http://web.idirect.com/~dkwood
so people could keep abreast of there chances
.....---- Please advise myself via e-mail what you think of the
idea---...
Scantrix will ship out to the winner on aug 2 1997
the winner will be notified via e-mail and there name will appear on the
Scantrix home page
(Payment would be via mail of $5.00 money order.)

David K. Wood
Looking for other ideas.... please advise.

This is from their informational literature being distributed at the
Dayton Hamfest. They had one on display at the ADCO booth. Looks nice,
computer screen, but I don't know if it's going to be worth the projected
$1500-2000 pricetag quoted by the person at the booth. Its at the FCC for
type acceptance.

"The digital revolution with true IF digital signal processing. The
AR7000 is another breakthrough of the AOR receiver design. It is the
first RF DSP receiver for the future of listening. Signal demodulation
and filtering are performed with high speed 16-bit DSP and digital down
converter that digitizes the signals with 10.7 MHz IF. 3.5" color LCD
provides the visual scan/search operation that shows the frequency
spectrum."

Specifications:

Frequency range: 100Khz-2GHz
Frequency step: 10Hz-1000Khz
Receive modes: AM/NFM/WFM/SSB/CW
Memory channels: 1500 ch (100 x 15 banks)
IF Filter: SSB 2 KHz/2.5 KHz/3 Khz
CW 50 Hz/150 Hz/250 Hz/ 500 Hz/800 Hz
AM 3 KHz/ 6 KHz/ 8 KHz/
CW tone: 400 Hz/ 600 Hz/ 800 Hz
NFM audio filter: 2.5 KHz/ 3 KHz
WFM filter: 7.5 KHz
IF shift tuning: +/- 8.5 KHz
AGC: Fast/slow
Presettable clocks: 4
Programmable timers: 5
Search banks: 8
Scan banks: 8

GUI with 3.5" color LCD
IR remote control

RS-232C PC I/F

Hi,

Anyone know anything about the new AOR wide band, think it's called the
AR7000, superceding the AR5000.

Thanks

Karl

>will probably repair it, but it will cost you a fortune. I see the Air-8
>from time to time for around $150 used.

You are correct there. I had them repair my PRO-80 (same radio) and
it cost $125.00, just to replace a zapped front-end transistor. It
took so long that I think they sent the unit to Japan for repairs. It
is working OK though. I sent mine to the Atlanta office.

By the way, they have the service manual available for about $12.00,
excellent manual for the money.

An interesting note. Sony tried everything imaginable to keep me from
having it repaired. They offered me a "special deal" on any of the
newer Sony shortwaves (it was really a lousy deal upon checking
further), and definitely didn't want to repair the radio, as they had
two different people call trying to keep me from having it repaired.
That's why I think they may have sent the unit to Japan for the
repair.

> I wonder if Pinero wants to monitor computer transmissions as well.
> A lot of sensitive and private information goes through there.
> Currently, departments that use VHF (?) systems pass this data over
> the air. Anyone with a scanner has acess to it.

Ha! I think Mr. Pinero can answer this one for himself, and the answer is no. If I wanted personal information I wouldn't rely on the random and sporadic VHF police transmissions at all. I'd go down to the court house and simply check it out. Or, I'd check out the 9-1-1 tapes. Or, I'd follow the siren I hear down the street in my own car to see where it's going. None of these things matter though because I have never been particularly concerned about specific personal information. And if I were, there would be laws against using scanner communique to deter me.

Truely confidential information ISN'T casually broadcast over VHF frequencies. Officers are careful to respect sensitive cases such as those involving rape calls and other protected data...but David Pinero has no real problem with this kind of information being digitally encrypted anyway. David Pinero is only talking about the routine patrolcasts. Others here may feel differently, wanting the whole anchalata, or maybe even less...we all have different opinions. The pro-open broadcasting argument, as we have seen by glory of this rather long thread, covers a wide spectrum of attitudes.

The way you present your post suggests that we've only recently been broadcasting openly. But open broadcasting has been going on for 60 years. The procedures and laws are in place to deter taking advantage of open broadcasting, and these laws are based on experience. For the most part there have not been problems. Digital systems will empower the police to protect more sensitive data like never before, but this should not be applied mindlessly to ALL police broadcasts such as those used during basic patrol. And certainly not in the wake of the cost of isolationism.

I don't know how you feel about the media being allowed to scan police while general members of the public cannot, but if you are for that then you support an accidental alliance between police and media. You, as a citizen, will be reduced to getting all your information straight from corporate media. That should bother anyone of any political affiliation. We ALL allow ourselves to fall for "convenient" dependence on the media because it is often the most efficient thing for us to do. But that convenience will become exclusive dependence in a

closed-broadcasting world. You don't have to be a conspiracy nut or paranoid to appreciate that.

Dave

For every idiot who gets involved improperly (are those people being prosecuted?), there are hundreds if not thousands of other members of your community sitting quietly at home listening to the very same calls. Some of those people are volunteer firefighters, EMTs or Paramedics. Some are ham radio operators who are trained to interoperate with government and public safety agencies in time of major emergency. All of them are shut out of the system in which they normally participate in a meaningful way by exclusionary transmission methods. Your community as a whole pays the price for a few a$$holes if your agencies decide to lock everyone out.

I've spent a lot of time in public safety, too, and my experiences don't match the ones that you allege. We've had one or two individuals become nuisances with their scanners and other paraphernalia in my county. At least one of them is in prison, where he belongs.

wrote:

>When I talked about convincing my local police agency into giving
>citizens access to police communications via police portable radio
>units, I only meant RECEIVE-ONLY radios.

When I first read your post I just assumed you meant this. I couldn't
imagine any police department being convinced by anyone to authorize
the general public transmit radios.

There seems to be one paranoid who jumped all over this. Must be an
indication of the way he conducts his business on the job. Paranoia
of everyone conducting themselves illegally is a good indication that
you are that way yourself.

I can't think of any reason to start making police freqs harder to
receive. There is no benefit. If the reason is because of concern
for 'wackos' who will literally follow all the action - so what ? As
long as they don't cause any interruption to the police/fire/ems doing
the job who cares? Let 'em gawk all they want.

If there is something that needs to be communicated privately that's
what payphones are for or meet each other somewhere.

Get over it. You're in a public job. Most everything you do in
public will be seen and scrutinized to death.

I think you may be miising the point. It's not so much the loss of
"recreational listening", as it is that the police tend to want to
cover up what they are doing. ie; YOU civilians have no need to know,
so mind your own business. Well, the fact that we pay the bills would
indicate that there may be some things we would like to know about.
And should have a RIGHT to know. Some one once said, , , If your
police don't want you to hear what they are doing, , , , MOVE!!!!

Mike, your assinine comments are only indicative of your lack of
understanding of the whole picture. This "liberal" attitude of
denying everyone because of the _possible_ mis-use by a few, is just
the typical attitude of a police officer, with what is known as the
"black glove" syndrome. Grow up, Mike. There IS life outside the
cop-shop.

I don't have a problem with the punlic hearing routine calls. But for
tactical situations & sinsitive investigations the has to be some
confidentiality.

Having a hostage killed as in the situation I described does no good I
cam see. Thats why some, but not all, frequiencies need to be private.

Here's the key. You'll NEVER stop people from listening and personally I don't care if they do. You CAN stop them from transmitting and should. Meaning scanners (which do NOT transmit) are OK. Portable radios (which do transmit) are not.

There were NO examples in the AHD, by the way.

And since you are in dickhead mode again, there is little that is
"secret" about your police force. In fact, if you (well, not YOU,
because they probably already have too much experience with you. If
most people) asked nicely, the PD would probably schedule a ridealong.
This would allow you to see firsthand what the department is up to.

About the only things you would not be allowed to see would be
information on juvi, rape, and drug cases. Something about the
"innocent until proven guilty" rule. And the laws against the release
of most juvi info.

> ~~~~~~
> If you support the current government then you support a police state for
> yourself and most likely a dictatorship for your children. Don't you love
> your children?

> Read it and THINK.

Let me make two things perfectly clear:

1. I don't have a problem with people listening to the majority of
public safety broadcasts. There are limited amounts of information
which are so secure that they need to be scrambled, and in most
situations, you just telephone to relate them. My only concern would be
information about sensitive things like rapes or deaths where the kin
have not been notified. I understand that most crimes are solved
because of the public, and quite a few by scanner listeners. Got it?
Good.

2. I cannot fathom why this idiot would allow public access to a
transmitter. Yes, I DO care about my children. So much so, that I
would probably blow away some dickhead who had one of those transmitters

and jammed the frequency and my child dies because of it. There are only three reasons to want a p-safety radio. First, you are in the field. Second, you are not in the field, but are a groupie, and feel "cool" because you have one. Third, you are a lowlife, and you want the ability to jam the frequencies, or send out misinformation. This is not very far-fetched, either. Many police and fire services in this area use repeaters, and if someone sits on their portable, the whole system is blocked (by a 5W portable.)

Understand that I fall quite a ways from where you tried to position me, but nowhere near where that OTHER guy is.

I use Message Tracker Plus with Pro-2005. I connected it to the 3.5mm
phonojack.
After a little testing with Squelch and Volume I found the optimum level of
audio.
I get something like one error per 200-300 messages received.

Announced last year with a early model displayed here in the UK in October.
I don't know if one was on display at Dayton last week.

No further details seem to have been released by AOR - first deliveries were
originally planned for 1997 but exactly whn we will just have to wait. Some
basic details and LCD screen dump on our web page.

The AR7000 doesn't superceed the AR5000.

All the best

Hello every one !
My personal opinion is you will be able to hear police and anything
elese for a long time. It's always just a matter of time .
A few examples of technology, radar was created , radar detectors
where created very shortly, laser created , and quickly folowed
the laser detector, Scrambling of Satellite dish was quickly
descramble. Here in Canada the Opp (provincial police have that anoying
beep sounds between conversations) nobody listen to that crap unless
they have the ctss tone in their scanner, Funny scanners now have ctss
tones and the beeping noises disapeer. They also have tracking system
on scanners now for trunk radios. We all felt like shit when police
went to 800 mgz , we could'nt hear them any more, how long did it take
to get 8oo mgz scanner???? Not very long I could go on and on with
examples .Hackers or companies will figure out a way to hear digital
conversations, its a matter of time , Just like when we couldnt hear
celular phones what a drama that was!! now with a lot of people having
computers it even makes things easier.
Be patient and the thechnology will cath up to what you think is a
problem now.

Huh? That's simply not true. Two police officers owe their life to a scannerist here in Tampa, and so does a St. Petersburg State Trooper. Are you saying that saving the lives of police officers is not "enhancing" public safety? Officer Howell of Tampa would completely disagree with you. Even to DISagree with you, officer Howell would have to be alive, which he is--thanks to a scannerist.

I'm afraid you're very wrong. Just ask Kansas City, as one of many cities that have had MAJOR problems with officer safety due to the inherent problems of using 800 MHz frequencies and not-quite-fully-designed-yet-but-available-for-sale-anyway trunked radio systems.

>Does the citizen have the right to monitor, and perhaps interfere

We've had that right for at least 63 years. That's when it was put into writing in the Communications Act of 1934. The actual right to monitor the government actually goes back to the Constitution, and its origins may even be found in the Declaration of Independence.

As European and former Soviet countries become more open to their citizenry, the US seems to be heading toward the kind of policies that we supposedly fought a long "cold war" against, and that we've sanctioned for over 30 years by economic isolation of Cuba. The new Red Square is being built in Washington, DC.

With some help from Jim, I've gotten about as much as I can expect out of my local trunked system's data channel. Here's the summary:

trunker.c uses the following fields as it decodes:

<ID> <Group> <Command>. Group is actually the inverse of the transmitted data, but using that convention:
ID## G x308
Grp# G freq# ID## transmitting to group Grp# on freq# (2-OSW sequence)

ID1# I x308
ID2# I freq# ID1# transmitting to ID2# (private call - not available with new trunking scanner)
on freq#

(not preceded by a x308 OSW)
Grp# G freq# Group Grp# is still allocated freq#. These keep going as long as mike is open.

ID## I x308
Grp# I x310 Assign unit ID## to group Grp#

G x308
G x322 packed time/date - see trunker.c for decoding info

f0d1 G x3a0 thanks Jim - beginning of CW id on freq 0d1 (yours will differ)
e0d1 G x3a0 end of CW id interval on freq 0d1 (not sure of other high-order bits)

ID1# I x308
ID2# I x319 One unit is paging another - not sure which is sender vs receiver of page

You will also see the following kinds of data during idle intervals:

x3c0 one-word system status, decoded as follows: append Indiv bit to right of ID, to get
17 bits. (individual == '0'b). Split from left to right:
3-bit opcode (not sure of usage)
1-bit power (not sure of usage - I've only seen 1, maybe 0 means don't bother?)
4-bit Dispatch Time-out (x30seconds)
5-bit Connect Time-out (x30seconds) for phone calls
5-bit time-out for group transmissions (x30seconds)

I x32b declaring this systems systemID (in ID field). Mine is 0x1f3e.

sysid G x308
G x30b system id, + control word decoded as follows, from left to
right:
6-bit opcode
10-bit frequency # for the data channel

1ffx G freq# this is a normal assignment of frequency to group, but since
1fxx bits are set in group
id, the 'group' means the data channel.

0b19 I x2f8 Jim informs me this is a common idle word. your mileage may
vary.

Finally, a word about group IDs. In the type II system here, the low nibble
of group IDs are normally 0,
e.g. 0x0670. However, those bits contain status information, one of which
(0x0002) is the Emergency Button
status, so if the user hits the red emergency button on the radio, the
called group would come over as
0x0672. Then you'll hear a flurry of traffic as people try to figure out if
there's a problem or not...

I hope this condensation is helpful to SOMEONE out there. I'm really please
with the collaboration one can
find on the net!

Nrf

How about ham operators, neighborhood watch groups, or anyone else who wants an operational RECEIVER to continue monitoring the very same radio traffic that they have been monitoring for years on conventional radio systems.

>very far-fetched, either. Many police and fire services in this area
>use repeaters, and if someone sits on their portable, the whole system

Yep, and the "dickheads" (as you put it) who usually cause such blockages are firemen and cops. Shall we take away their portables until they get smarter?

1795. For sale: Pro-63 handheld

Newsgroup: rec.radio.scanner
Date: 1997-05-21 00:00:00 UTC
From: Brett Reinbold <breinbold@cybermania.net>
Message-ID: <01bc65dd$bfa87f80$9a0087d0@brettrei>
Source record: 197258

I have had a Pro-63 for less than a month and I hardly use it. This is a handheld scanner with 100 channels. Freq range is 29-54, 108-174,380-512. This scanner is great for listening to races. The original price on this was $249.00 but I would let it go for $175.00 o.b.o. I will also pay for shipping costs. Thanks!

Hopefully, someone can assist me in finding out what kind of head phones to buy. I have a BC 200 XLT scanner and want to take it to a Nascar race. I have taken it once before and used and mono to stereo adapter to plug in my Walkman style head phones. Well as some of you already know... I could not hear squat. The noise factor is to much. So I guess I need some "cup" style head phones. I purchased another adapter to plug in my Koss Hi Fi head phones but the volume is far to low (perhaps the impedance or something). Anyway.... I need some recommendations on good headphones to use with my scanner at Auto racing events. Any ideas? Hopefully local kinda stores because the Coca-Cola 600 I have tickets to is this weekend. Thanks in advance.

A properly designed charging system for NiMH cells can rapid-charge them at a rate of C or greater. Witness all the people getting hundreds of cycles on their NiMH cellular phone batteries after 1-hour charging cycles.

I have used the Diamond D-130 Discone and a Radio Shack 15-1113 UHF/VHF/TV preamp to run several radios through multiple splitters. It does a fair job of compensating for some of the loss. Neither my 2004 nor 2006 enjoy being pre-amped. It makes the pager intermod a lot worse, too. Never tried a mast mounted preamp.

I like to listen to Mcdonald's on my scanner when I am in the drive thru so I can hear the conversation between the workers. (Heard a guy and a gal having a very 'private' conversation once.) Just before I drove off I told the guy he shouldn't be talking that dirty to his fellow employee. I then heard the guy say to the girl on the scanner as I was leaving... "That son of a bitch read my lips" !!!

True Story!

No, this is not a misprint. I have a source who needs to make money and I sure am going to make money. Obviously, if you could really purchase one of these units today for $299.99 you would not be e-mailing me about my price.

By the way, I posted this last night at 6:30pm and by 8:30am I have sold all but 3 for $379.95, and I am thinking of raising the price for the next batch I get in tomorrow(about 30). If you would like to purchase one of these, please mail me and let me know. Thanks.

First off I have to defend myself. One, I have no choice. The government is moving me if I like it or not. Two, don't belive everything you see or read from the media. Los Angeles is full of culture and some very wonderful people. Every town, city, or super city has it's problems. Drugs and gangs are everywhere you go, and fearing them gives them power. Power to dominate your media, minds, and freedoms. Besides, a good dose of fear keeps the red necks home. Less traffic to drive in.

So NO! I would not trade Los Angeles by choice for any other city in the U.S. As far as Tucson goes, and a few other comments go. If Tucson is such a "gods country" why do they have over 30 police frequencies for the city alone. Over 50 for State Police, and a trunking system for Pima

County that is said to be unmonitorable? Could it be the crime is so high they need that many police officers per person? What is Pima county Sheriff's office attempting to hide? Abuse, maybe? According to Tucsons page, it's only a town of 500,000. Looks like over kill to me. The city of Anaheim, home of Disneyland, and a polulation of only 389,000 only uses 2 frequencies for there police department. No Sheriff's or State police coverage is required.

Ha!

I understand your concern. I certainly don't see any good reason for someone in the general public to be _broadcasting_ on police, fire, or other public safety frequencies. Nor should people interfere with public safety officials performing their jobs. Those things are illegal, and idiots who do those things should be punished severely. But I don't see any reason for the most of this stuff to be secret, either. You can't justify cloaking everything in secrecy on the justification that some people _might_ use the information that they gather for criminal purposes.

A triple-conversion scanner is specifically designed to make images appear out of the passband of the receiver so you CAN'T hear these images.

If you live next to a cell tower, perhaps you might pick up cellular conversations all over the band, but generally this shouldn't be true on a properly working receiver.

This is the way radio operates and the laws of physics cannot be legislated. With all of the dual-conversion scanners Radio Shack sells (that CAN hear cell images plainly), I rather doubt there has been a recall on a triple-conversion for this reason!

AMEN! I have been trying to educate folks about how evil and oppressive
our right-wing government is. Fact: We live in a dictatorship. The
shenanigans that Congress (and to a lesser extent, the President)
regularly pulls proves it.
It used to be, "Wear clean underwear in case you're in an accident."
Now it's, "Wear clean underwear in case you're strip searched."
It has gotten to the point where I am strongly in favor of forcibly
removing the present regime from power. Congress no longer abides by
ballots--why did it seat John Hostettler even though he lost the
election?--so maybe they'll abide by bullets.

It sounded like you wanted to prevent these departments from going to
the system in the first place. I'm aware that digital systems have
those features. The state police have such a system and did track a
stolen radio once. (It seems the money appropriated for our system
disappeared but that's another story.)

```
Z Are you talking about digital signals being transmitted on analog
Z transmitters (Mobile Data Terminals, Pagers, Etc) or are you talking about
Z digital transmissions? The AR-7000 is no more a "digital" scanner than any
Z other radio, except maybe those without keypads!

I apologize for my ignorance. I thought the AR7000 was a digital scanner the
only thing digital about it was the DSP feature. Sorry.
I meant both.

Z By "monitored" do you
Z mean receiving the signal or decoding the transmission? Decoding digital
Z signals is illegal in the U.S. (Though our brilliant, paid-for legislators
Z didn't bother to define that term, either). The intended protectees of the
Z law are PCS phones.

I mean, able to understand the transmission. I live in Sweden so I can decode
all I want.

So Smokie..... Some crook take someone hostage for ransome... The cops do a stakeout for the crooks..... Crooks get tipped off cause a bunch of knuckleheads & media types with scanners show up at the money drop sight & blow the stake out for the cops. Crooks kill the hostage.

No way you say... It happened in my city.

A bunch of idiots with scanners do nothing to enhance public safety. The cops are not the enemy.

Responsible civilian oversight by an appointed board is the answer for those that feel such oversight is necessary..

Nope: Shocker number #2--I actually *support* going digital. I want to see basic patrolcasts made available for public monitoring. However, digital systems allow for new security features that can be selectively applied to thwart criminals, and I am for any new technology that does just that (see my home page).

However, this does not mean I want to see "going digital" used as some blanket excuse to keep the public locked out of basic patrolocasts.

I really am going to redo my "Comprehensive Internet Resources for Open Broadcasting". I have clearly miscommunicated a lot of the fundamental elements. :P

Well, if someone does pull a bonehead move like this, they need to be dealt with accordingly.

How many people are you thinking actually cause death or more harm to someone because they follow scanner calls and wanted to play 'superhero'? I would say this is so rare that if it ever did happen it would make national news. I don't recall ever seeing such a story......

I think you are more likely to have someone come upon a serious accident just because they were already there, and cause more damage to someone when they thought they were helping.

As someone else posted before, digital systems have tremendous potential outside of just communication. You can pack tons of stuff into that signal besides just voice now. Let the professionals make the move to digital. Just don't think the town/city will vote in your favor for the expenditure if they are being told they can't listen anymore.

Yes, I bought one a while back, and find it an okay unit. I still haven't figured out quite how long the batteries last per charge, but I do like the fact that it will recharge a pack of rechargables in 10 to 18 hours, a little more if you have the scanner on while plugged in. The only beef I have, and this may be common to all scanners, is the amount of noise on the headphone jack. I quite often use an earplug to listen to the scanner, particularly when I'm out rescue training, and I find that the hiss from the amp nearly takes my head off.

All in all, it's a good little unit.

WOW!

For Sale: Commercial F.M. Music Band DIGITAL frequency controlled Transmitter! Transmitts on ANY frequency from 88.1~108MHz. "Drive-Buy Radio/INR Technologies, Canoga Park, Calif. Model 1000"

Has built-in LCD Frequency/Clock Digital Display(!) with ON/OFF Timers. Also has built-in Cassette Player! Includes AC Supply or you can take this Transmitter portable with a 12VDC Battery! Portable 25' (coax) Antenna and full manual included.

This Transmitter was designed to operate at a home or property that is for sale. A smaller sign on the For Sale sign directs the driver to tune his/her radio to "*88.1MHz" to hear the features of the property.

While it works fine with the three-minute "endless-loop" tapes (2 included), a 90 minute tape works just fine too! Caution! No auto-off. Has earphone jack to hear transmitted audio too. Sorry, mono only.

Upon request, I can install a Switch and Jack to switch a external Microphone on and tape drive off. One can then connect a Mike, Scanner Audio, Turn Table or ??? to the Audio Input! Internal Audio Gain Control with PLENTY of audio to spare! The Transmitter is designed for continuous duty.

ONE ONLY, fully tested OK, shipped to your door (USA only), Postage and Insurance included: $100

Source record: 197331

Man, is it EVER! I finally decided to plug in the 800 MHz frequencies. I took out the 156 MHz frequencies because it was useless trying to listen because KCPD would hang up the scanner for hours with all the "black male with a gun" calls -- EIGHT of them in 15 minutes one night.

Now, however, the 800 MHz channels are hung up with some guy doing a radio check: "1, 2, 3, 4, 5, 6, 7, 8, 9, 10 --- 10, 9, 8, 7, 6, 5, 4, 3, 2, 1. . ." and when I *do* hear a genuine call, there is some sort of unfamiliar beeping.

A couple of years ago it was working fairly well. In fact, late, late at night you could listen to the hooker patrol and the drug raid teams on their stakeouts. Then and now I hear assorted phone calls -- not cellular, but as if the city's 800 MHz system has phone patch capabilities -- and the calls are overwhelmingly NOT city bidness.

The Family Radio Service, or FRS, was created in 1996 by the FCC. It allows for low power operation (500mW max) on the 467MHz band, forgive me as I don't know the frequiencies off hand, but there are 14 channels. Only talkaround (unit-to-unit) communications are allowed (no repeaters). No license is required to buy, or operate one. The idea for FRS was pioneered by Radio Shack and Uniden, and a few other consumer electronic manufacturers. Many of the radios for FRS look like the ever-popular "flip-phone" design, while some others look like ordinary commercial two-way portables. Most radios have CTCSS capability for screening out unwanted traffic, and some have DTMF selective calling.

The big selling point for FRS is that is THE alternative to 49MHz walkie-talkies and CB. FM is used, and with half a watt of power and utilizing UHF, much better range and immunity to interference from electrical/enviornmental sources. Under most conditions, an FRS portable will cover about a 1 mile radius, maybe more under some conditions (i.e.; being on top of a mountain or high rise building) or less (inside a shopping mall or concrete building).

Radio shack and others are marketing these to active families. The show in their literature kids and parents using the radios at shopping malls and amusement parks, and keeping in touch on hiking trips. Not a bad idea, but the radios are kind of pricey for what they are. (average price over a hundred dollars per unit for a
cheaply built, low power radio). They do serve their purpose, though.

Check out Motorola's web page at http://www.mot.com for more info about their "TalkAbout"(tm) FRS radios.

First, where do you live that the media can accurately report anything related to public safety? :-)

Second, "after it's been handled" can just as well mean "after the perp got away because the people who saw him didn't know the police were looking for him."

I make what I think is a good attempt at my website. It's not the
bottom line on the issue but I consider it a good starting point. I
prefer if you and everyone else would visit this site as I seem to be
continuously debating old issues over and over, but here is how I put
it at the site:

"...For the sake of the pro-access argument, patrolcasts are those
broadcasts related to the fundamental patrol duty of police officers.
They are the primary exchange of communications between officer and
dispatcher as the officer is sent from one spontaneous call for
service to another. Because the utility argument of the pro-access
standpoint involves aiding the average citizen in avoiding critical
situations, such as police pursuits, patrolcasts include those
situations of dire emergency as well. Others may have perfectly valid
definitions of what a patrolcast is, but this definition is a good
starting point..."

>This is a "talk show" generation, people gawk at traffic accidents,
>watch people make fools out of themselves on national TV, etc.
>Myself, if I could be considered a relatively normal person and were
>to have a scanner, would turn it off if all I were allowed were
>service calls. But I would kick up at the SWAT hostage negotiation
>channel, the internal affairs frequency, the FBI running a sting op, -
>see what I mean? The "good shit" can't be broadcast because of opsec.

Your post shows good insight to the motivations of scanning as a
hobby, even if it doesn't adequately address the other issues we've
discussed such as the utility and open democracy aspects. Like you
did at one point, I do enjoy being let in on the action from time to
time. But this is why some cops become cops, or some cops stay cops.
We don't boot out officers who enjoy the action and exhilaration of
their job from the force, anymore than we should boot open
broadcasting just because at times we as open broadcasting absorbists
enjoy the action either as a supplement to the act, or as a primary
motivation. You forget, there are bonafide CNN junkies out there, but
I would be angry if we decided to shut down CNN because of it. People
being crisis-junkies have prompted them to enter very positive social
functions. A lot of them become journalists. And, as I've said
before, some become police officers. It's not an efficient standpoint

to lead the open broadcasting argument with, but it's not an excuse to stigmatize the cause either. Believe me, if it were ONLY because I enjoy being let in on the action that I support open broadcasting, I'd never have taken up arms to support it and cause all this trouble.

Patrolcasting, by my definition DOES include police chases. It also includes ALL medical and fire ground tactical operations which are not specifically centered on security. In the course of broadcasting these and other events before they become crucial and sensitive enough to move to another frequency or talkgroup, SOME information will be leaked like it has been for the past 60 years. But at least the new digital option now allows for securing these issues past any initial leak that occurs prior to defining an incident as high-security.

By the way, consider that the future of police radio may ONLY be in on-the-fly emergency operations anyway. You or someone else who pointed it out was right when they talked about how much routine communication was now taking place over MDTs. This has reduced the clutter of DMV information (yawn), warrant queries, etc., by a truckload. Prior to going digital, HCSO was "very good listening" from an action standpoint because only the really good stuff you talked about was likely to be broadcast. And I found very little of this action to fall outside my definition of basic patrolcasting.

Basic patrolcasting still tells me where the accidents are, where the maniacs are, where the suspicious activity is, and it keeps me a little more trustful of the police. Stripped of all the action you talk about, open broadcasting is still very useful to the public. Especially by my definition of open broadcasting, and likely by others as well.

As for fire and medical, they are always action-packed and when we talk about security from a predatorial sense, should not be omitted from the basic talkgroup programming of digital radios sold to the public. Such freqs./talkgroups are almost vital to the utility aspect of open broadcasting, particularly during times of natural disaster when citizens will have dire need to listen directly to emergency service broadcasts. This is actually a very big issue. When I eventually purchase my HCSO portable radio I will make sure that I have the same programming offered to the media, which likely includes medical and fire response talkgroups, as well as the two primary patrolcast talkgroups used by HCSO.

>I dunno, the good shit is what the public wants to hear and I don't
>think they should. If they are so bored that they get excited about
>"unit 153 - stranded motorist on I-70 mile marker 155" let them go
>for it. They can read about the good shit in the paper the next
>morning - after it's been handled.

I don't want to have exclusive dependence on my local newspaper. It is the only newspaper in our city and it is run by a giant media conglomerate called Media-General. The same media company also owns

the one of few local talk radio station, and a TV station. I do not want to rely on them, or their alliance with the state to deliver the news. They frequently don't cover events that are important to me, and I have no way of telling what has been filtered for political reasons, spacial reasons, or God knows what other reasons. Open broadcasting spares me from that dependence. And that's a very big part of this whole thing--way more than the action slant you talked about with very good insight.

Some police departments DO use QSL, and QTH too.. If you watch
COPS on television, the Miami PD uses Q-signals a lot.. I've heard
others, but didn't find out who they were from the show.. I've
heard a few in the Denver, Colorado area on my scanner that do, too..

Doesn't the FCC regulate who can transmit on a given frequency through
liscenses? Who gives a shit to broadcast on the frequencies when they can
call in for complaints and whatnot, all we NEED to do is hear. I don't
remember any one saying they wanted to transmit on police bands.
Now what'r you sain' Mikey?
